MA1101BS :LINEAR ALGEBRA & CALCULUS

| Course Code | Category | Hours/ Week | | | Credits | Maximum Marks | | |
|----------------------------|-----------------------------|-------------------------------|---|---|---------|-------------------------|-----|-------|
| MA1101BS | Basic Sciences | L | T | P | 4 | CIE | SEE | TOTAL |
| | | 3 | 1 | 0 | | 30 | 70 | 100 |
| Contact Classes: 48 | Tutorial Classes: 16 | Practical Classes: Nil | | | | Total Classes:64 | | |

Course Objectives: To learn

1. Types of matrices and their properties.
2. Concept of a rank of the matrix and applying this concept to know the consistency and solving the system of linear equations.
3. Concept of Eigen values and eigenvectors and to reduce the quadratic form to canonical form.
4. Concept of Fourier Series.
5. Concept of nature of the series.
6. Geometrical approach to the mean value theorems and their application to the mathematical problems
7. Evaluation of surface areas and volumes of revolutions of curves.
8. Evaluation of improper integrals using Beta and Gamma functions.
9. Partial differentiation, concept of total derivative
10. Finding maxima and minima of function of two and three variables.

Course Outcomes: After learning the contents of this paper the student must be able to

1. Write the matrix representation of a set of linear equations and to analyse the solution of the system of equations
2. Find the Eigen values and Eigen vectors
3. Reduce the quadratic form to canonical form using orthogonal transformations.
4. Analyse the nature of sequence and series.
5. Solve the applications on the mean value theorems.
6. Evaluate the improper integrals using Beta and Gamma functions
7. Find the extreme values of functions of two variables with/ without constraints.

UNIT-1: Matrices

Matrices: Introduction. Rank of a matrix by Echelon form and Normal form, Inverse of Non-singular matrices by Gauss-Jordan method; System of linear equations; solving system of Homogeneous and Non-Homogeneous equations. Gauss elimination method; Gauss Seidel Iteration method, LU Decomposition Method.

UNIT-2: Eigen values and Eigen vectors

Vectors Linear Transformation and Orthogonal Transformation: Eigen values and Eigen vectors and their properties. Diagonalization of a matrix; Cayley-Hamilton Theorem (without proof); finding the inverse and power of a matrix by Cayley-Hamilton Theorem; Quadratic forms and Nature of Quadratic forms; Reduction of Quadratic form to Canonical form by Orthogonal Transformation.

UNIT-3: Fourier series

Definition of periodic function, Fourier expansion of periodic function in $(0, 2\pi)$ and $(-\pi, \pi)$. Determination of Fourier coefficients – Fourier series of even and odd functions – Half – Range Fourier Sine and Cosine expansions.

UNIT-IV: Calculus

Mean value theorems : Rolle's theorem , Lagrange's Mean value theorem with their Geometrical Interpretation and applications , Cauchy's Mean value theorem.

Definition of Improper Integral : Beta and Gamma functions and their applications.

UNIT-V: Multivariable calculus (Partial Differentiation and applications)

Definitions of limit and continuity. Partial Differentiation ; Euler's Theorem ; Total derivative ; Jacobian ; Functional dependence & independence , Maxima and minima of functions of two variables and three variables using method of Lagrange multipliers.

TEXTBOOKS:

1. B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers, 36th Edition, 2010
2. Erwin kreyszig, Advanced Engineering Mathematics, 9th Edition, John Wiley & Sons, 2006.
3. G.B. Thomas and R.L. Finney, Calculus and Analytic geometry, 9th Edition, Pearson, Reprint, 2002.

REFERENCES:

1. N.P. Bali and Manish Goyal, A text book of Engineering Mathematics, Laxmi Publications, Reprint, 2008.
2. Ramana B.V., Higher Engineering Mathematics, Tata McGraw Hill New Delhi, 11th Reprint, 2010

CH1102BS: CHEMISTRY

| Course Code | Category | Hours/ Week | | | Credits | Maximum Marks | | |
|------------------------|----------------------|------------------------|---|---|---------|------------------|-----|-------|
| | | L | T | P | | CIE | SEE | TOTAL |
| CH1102BS | Basic Sciences | 3 | 1 | 0 | 4 | 30 | 70 | 100 |
| Contact Classes: 48 | Tutorial Classes: 16 | Practical Classes: Nil | | | | Total Classes:64 | | |

Course objectives:

1. To impart the basic knowledge of atomic, molecular and electronic modifications which makes the student to understand the technology based on them.
2. To develop specialized knowledge in the analysis of water and waste water which are essential for the engineers and in industry.
3. Learn about the fundamentals of electrode reactions and electrochemical cells
4. To provide an understanding of the corrosion principles and engineering methods used to minimize and prevent corrosion.
5. To familiarize students about the characteristics and applications of different polymers and engineering materials in every day life.
6. To acquire the skills pertaining to spectroscopy and to apply them for medical and other fields.

Course outcomes:

1. The knowledge of atomic, molecular and electronic changes, band theory related to conductivity.
2. Apply knowledge and understanding of water treatment process to real world problems.
3. Interpret the knowledge of electrochemical phenomenon involved in developing batteries and understanding fuel cells fundamentals.
4. Ability to determine appropriate method of protection against corrosion for a metal based on its applications in different fields.
5. Classify and characterize different polymers engineering materials and apply its knowledge to select suitable materials for specific applications.
6. The required skills to get clear concepts on basic spectroscopy and applications to medical and other fields.

UNIT - I:

Molecular structure and Theories of Bonding:

Atomic and molecular orbitals. Linear combination of atomic orbitals (LCAO), molecular orbitals of diatomic orbitals, molecular orbital energy level diagrams for N₂, O₂ and F₂ molecules. Crystal field theory (CFT): Salient features of CFT- Crystal Field Splitting of transition metal ion d-orbitals in Tetrahedral, Octahedral and Square planar geometries. Band structure of solids and effect of doping on conductance.

UNIT-II

Water and its treatment: Introduction – hardness of water – causes of hardness – types of hardness: temporary and permanent -expression and units of hardness. Numerical problems. Disadvantages of hard water.

Boiler troubles: Scales and Sludges, caustic embrittlement, boiler corrosion, Softening of water by internal treatment of Boiler feed water and ion- exchange processes. Desalination of water – Reverse osmosis. Sewage water treatment. Potable water treatment - Disinfection of potable water by chlorination and Ozonization.

UNIT-III

Electrochemistry, Batteries and Corrosion:

Electrochemistry: Electrochemical cells- Electrode, electrode potential, standard electrode potential, types of electrodes- Calomel and glass electrodes. Nernst equation, electrochemical series and its applications. Batteries: Cell and battery - Primary (Lithium cell) and secondary batteries (Lead – acid storage battery, Lithium ion battery, advantages and applications of solid state battery) Fuel cells: Hydrogen-oxygen, solid polymer electrolytic fuel cell, Bio chemical fuel cells----- Advantages and Applications. Corrosion and its control –Concept of corrosion, Types of corrosion, mechanism of Chemical & Electro chemical corrosion. Types of electro chemical corrosion (Galvanic corrosion, Pitting, Water line corrosion, stress corrosion). Factors affecting corrosion. Corrosion control methods -Principle of cathodic protection- Sacrificial Anodic Protection (SAP), Impressed Current Cathodic Protection (ICCP) . Protective coatings: Metallic coatings- Hot dipping, metal cladding, cementation, electroplating of copper, electro less plating of nickel, **paints.**

UNIT-IV

Engineering materials:

Ceramics: Properties & types of ceramics. Engineering applications of ceramics. **Polymers:** Definition, classification, properties of polymers. Plastics-Compounding of plastics, Engineering applications of plastics (PVC, Teflon, Bakelite), Fibres - Applications of Nylon 6. FRP- Types, advantages and applications. Natural rubber and its vulcanization. Elastomers- Applications. Conducting polymers and its applications-Mechanism of conduction and doping in poly acetylene. Applications of bio degradable polymers. **Composites:** Classification, Constituents, advantages, applications. **Lubricants:** Classification, properties and mechanism of lubrication.

UNIT-V

Spectroscopic techniques and applications:

Principles of Spectroscopy, Selection rules and applications of electronic spectroscopy. Vibrational and rotational spectroscopy. Basic concepts of Nuclear Magnetic resonance spectroscopy, Chemical shift. Introduction to Magnetic Resonance Imaging.

Suggested Text Books:

1. Physical Chemistry, by P.W. Atkins
2. Engineering Chemistry by P.C. Jain & M. Jain; Dhanpat Rai Publishing Company (P) Ltd., New Delhi.
3. Fundamentals of Molecular Spectroscopy, by C.N. Banwell
4. University Chemistry, by B.M. Mahan, Pearson IV Edition.
5. Engineering Chemistry (NPTEL Web-book), by B.L. Tembe, Kamaluddin and M.S. Krishnan
6. R. V. E. Gadag & A. Nityananda Shetty, Engineering Chemistry, I K International Publishing House Private Limited, New Delhi, 2015 Edition

ME1103ES: ENGINEERING GRAPHICS

| Course Code | Category | Hours/ Week | | | Credits | Maximum Marks | | |
|--------------------------------|------------------------------|------------------------------|---|---|---------|-------------------------|-----|-------|
| ME1103ES | Engineering Sciences | L | T | P | 3 | CIE | SEE | TOTAL |
| | | 1 | 0 | 4 | | 30 | 70 | 100 |
| Contact Classes: 16 | Tutorial Classes: Nil | Practical Classes: 64 | | | | Total Classes:80 | | |

Course objectives:

1. To provide basic concepts in engineering drawing.
2. To impart knowledge about standard principles of orthographic projection of objects.
3. To draw sectional views and pictorial views of solids.

Course Outcomes: At the end of the course, the student will be able to:

1. Preparing working drawings to communicate the ideas and information.
2. Read, understand and interpret engineering drawings.

UNIT – I

Introduction to Engineering Drawing: Principles of Engineering Graphics and their Significance, Conic Sections including the Rectangular Hyperbola – General method only. Cycloid, Epicycloid and Hypocycloid, Scales – Plain & Diagonal.

UNIT- II

Orthographic Projections: Principles of Orthographic Projections – Conventions – Projections of Points and Lines, Projections of Plane regular geometric figures. Auxiliary Planes.

UNIT – III

Projections of Regular Solids – Auxiliary Views - Sections or Sectional views of Right Regular Solids –Prism, Cylinder, Pyramid, Cone – Auxiliary views – Sections of Sphere

UNIT – IV

Development of Surfaces of Right Regular Solids – Prism, Cylinder, Pyramid and Cone, Intersection of Solids: Intersection of – Prism vs Prism- Cylinder Vs Cylinder

UNIT – V

Isometric Projections: Principles of Isometric Projection – Isometric Scale – Isometric Views – Conventions – Isometric Views of Lines, Plane Figures, Simple and Compound Solids – Isometric Projection of objects having non- isometric lines. Isometric Projection of Spherical Parts. Conversion of Isometric Views to Orthographic Views and Vice-versa –Conventions

Introduction to CAD: (For Internal Evaluation Weightage only):

Introduction to CAD Software Package Commands. - Free Hand Sketches of
2D- Creation of 2DSketches by CAD Package

TEXT BOOKS:

Engineering Drawing N.D. Bhatt / Charotar

Engineering Drawing / N. S. Parthasarathy and Vela Murali/ Oxford

REFERENCE BOOKS:

EE1104ES: BASIC ELECTRICAL ENGINEERING

| Course Code | Category | Hours/ Week | | | Credits | Maximum Marks | | |
|----------------------|-------------------------|--------------------------|---|---|------------------|---------------|-----|-------|
| EE1104ES | Engineering Sciences | L | T | P | 1 | CI E | SEE | TOTAL |
| | | 0 | 0 | 2 | | 30 | 70 | 100 |
| Contact Classes: Nil | Tutorial Classes: Nil | Practical Classes: 32 | | | Total Classes:32 | | | |

Course Objectives:

1. To introduce the concepts of electrical circuits and its components
2. To understand magnetic circuits, DC circuits and AC single phase & three phase circuits
3. To study and understand the different types of DC/AC machines and Transformers.
4. To import the knowledge of various electrical installations.
5. To introduce the concept of power, power factor and its improvement.●

Course Outcomes:

1. To analyze and solve electrical circuits using network laws and theorems.
2. To understand and analyze basic Electric and Magnetic circuits
3. To study the working principles of Electrical Machines
4. To introduce components of Low Voltage Electrical Installations●

UNIT-I:

D.C. Circuits Electrical circuit elements (R, L and C), voltage and current sources, KVL&KCL, analysis of simple circuits with dc excitation. Superposition, Thevenin and Norton Theorems and maximum power transfer theorem. Time-domain analysis of first-order RL and RC circuits.

UNIT-II:

A.C. Circuits Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor, Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance in series R-L-C circuit. Three-phase balanced circuits, voltage and current relations in star and delta connections.

UNIT-III:

Transformers Ideal and practical transformer, equivalent circuit, losses in transformers, regulation and efficiency. Auto-transformer and three-phase transformer connections.

UNIT-IV:

Electrical Machines Generation of rotating magnetic fields, Construction and working of a three-phase induction motor, Significance of torque-slip characteristic. Loss components and efficiency, starting and speed control of induction motor. Construction and working principle of Single-phase induction motor. Construction,

working, torque-speed characteristic and speed control of separately excited dc motor. Construction and working of synchronous generators.

UNIT-V:

Electrical Installations Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, MCCB, Types of Wires and Cables, Earthing. Types of Batteries, Important Characteristics for Batteries. Power factor measurement using 2 wattmeter method, Elementary calculations for energy consumption,

CH1105BS: CHEMISTRY LAB

| Course Code | Category | Hours/ Week | | | Credits | Maximum Marks | | |
|-------------------------|-----------------------|-----------------------|---|---|------------------|---------------|-----|-------|
| | | L | T | P | | CIE | SEE | TOTAL |
| CH1105BS | Basic Sciences | 0 | 0 | 3 | 1.5 | 30 | 70 | 100 |
| Contact Classes: Nil | Tutorial Classes: Nil | Practical Classes: 48 | | | Total Classes:48 | | | |

Course Objectives: The course consists of experiments related to the principles of chemistry required for engineering student. The student will learn:

1. Estimation of hardness and chloride content in water to check its suitability for drinking purpose.
2. To determine the rate constant of reactions from concentrations as a function of time.
3. The measurement of physical properties like adsorption and viscosity.
4. To synthesize the drug molecules and check the purity of organic molecules by thin layer chromatographic (TLC) technique.

Course Outcomes: The experiments will make the student gain skills on:

1. Determination of parameters like hardness and chloride content in water.
2. Estimation of rate constant of a reaction from concentration – time relationships.
3. Determination of physical properties like adsorption and viscosity.
4. Calculation of R_f values of some organic molecules by TLC technique.

List of Experiments:

1. Determination of total hardness of water by complexometric method using EDTA
2. Determination of chloride content of water by Argentometry
3. Estimation of an HCl by Conductometric titrations
4. Estimation of Acetic acid by Conductometric titrations
5. Estimation of HCl by Potentiometric titrations
6. Estimation of Fe²⁺ by Potentiometry using KMnO₄
7. Determination of rate constant of acid catalysed hydrolysis of methyl acetate
8. Synthesis of Aspirin and Paracetamol
9. Thin layer chromatography calculation of R_f values. eg ortho and para nitro phenols
10. Determination of acid value of coconut oil
11. Verification of freundlich adsorption isotherm-adsorption of acetic acid on charcoal
12. Determination of viscosity of castor oil and ground nut oil by using Ostwald's viscometer.
13. Determination of partition coefficient of acetic acid between n- butanol and water.
14. Determination of surface tension of a give liquid using stalagmometer.

ME1106ES: ENGINEERING WORKSHOP

| Course Code | Category | Hours/ Week | | | Credits | Maximum Marks | | |
|--------------------------------|------------------------------|------------------------------|---|---|-------------------------|---------------|-----|-------|
| ME1106ES | Engineering Sciences | L | T | P | 2.5 | CI E | SEE | TOTAL |
| | | 1 | 0 | 3 | | 30 | 70 | 100 |
| Contact Classes: 16 | Tutorial Classes: Nil | Practical Classes: 48 | | | Total Classes:64 | | | |

Course Objectives:

1. To Study of different hand operated power tools, uses and their demonstration.
2. To gain a good basic working knowledge required for the production of various engineering products.
3. To provide hands on experience about use of different engineering materials, tools, equipments and processes those are common in the engineering field.
4. To develop a right attitude, team working, precision and safety at work place.
5. It explains the construction, function, use and application of different working tools, equipment and machines.
6. To study commonly used carpentry joints.
7. To have practical exposure to various welding and joining processes.
8. Identify and use marking out tools, hand tools, measuring equipment and to work to prescribed tolerances.

Course Outcomes: At the end of the course, the student will be able to:

1. Study and practice on machine tools and their operations
2. Practice on manufacturing of components using workshop trades including plumbing, fitting, carpentry, foundry, house wiring and welding.
3. Identify and apply suitable tools for different trades of Engineering processes including drilling, material removing, measuring, chiseling.
4. Apply basic electrical engineering knowledge for house wiring practice.

1. TRADES FOR EXERCISES:

At least two exercises from each trade:

1. Carpentry – (T-Lap Joint, Dovetail Joint, Mortise & Tenon Joint)
2. Fitting – (V-Fit, Dovetail Fit & Semi-circular fit)
3. Tin-Smithy – (Square Tin, Rectangular Tray & Conical Funnel)
4. Foundry – (Preparation of Green Sand Mould using Single Piece and Split Pattern)
5. Welding Practice – (Arc Welding & Gas Welding)
6. House-wiring – (Parallel & Series, Two-way Switch and Tube Light)
7. Black Smithy – (Round to Square, Fan Hook and S-Hook)

2. TRADES FOR DEMONSTRATION & EXPOSURE:

Plumbing, Machine Shop, Metal Cutting (Water Plasma), Power tools in construction and WoodWorking

TEXT BOOKS:

1. Workshop Practice /B. L. Juneja / Cengage
2. Workshop Manual / K. Venugopal / Anuradha.

REFERENCE BOOKS:

EE1107ES: BASIC ELECTRICAL ENGINEERING LAB

| Course Code | Category | Hours/ Week | | | Credits | Maximum Marks | | |
|-------------------------|-----------------------|-----------------------|---|---|---------|------------------|-----|-------|
| | | L | T | P | | CIE | SEE | TOTAL |
| EN1107HS | Humanities & Sciences | 0 | 0 | 2 | 1 | 30 | 40 | 100 |
| Contact Classes: Nil | Tutorial Classes: Nil | Practical Classes: 32 | | | | Total Classes:32 | | |

Course Objectives:

1. To analyze a given network by applying various electrical laws and network theorems
2. To know the response of electrical circuits for different excitations
3. To calculate, measure and know the relation between basic electrical parameters.
4. To analyze the performance characteristics of DC and AC electrical machines

Course Outcomes:

1. Get an exposure to basic electrical laws.
2. Understand the response of different types of electrical circuits to different excitations.
3. Understand the measurement, calculation and relation between the basic electrical parameters
4. Understand the basic characteristics of transformers and electrical machines.

List of experiments/demonstrations:

1. Verification of Ohms Law
2. Verification of KVL and KCL
3. Transient Response of Series RL, RC and RLC circuits using DC excitation
4. Resonance in series RLC circuit
5. Calculations and Verification of Impedance and Current of RL, RC and RLC series circuits
6. Measurement of Voltage, Current and Real Power in primary and Secondary Circuits of a SinglePhase Transformer
7. Load Test on Single Phase Transformer (Calculate Efficiency and Regulation)
8. Three Phase Transformer: Verification of Relationship between Voltages and Currents (StarDelta, Delta-Delta, Delta-star, Star-Star)
9. Measurement of Active and Reactive Power in a balanced Three-phase circuit
10. Open circuit Characteristics of a Separately/Self Excited DC Shunt/Compound Generator

11. Performance Characteristics of a Separately/Self Excited DC Shunt/Compound Motor

12. Torque-Speed Characteristics of a Separately/Self Excited DC Shunt/Compound Motor

13. Performance Characteristics of a Three-phase Induction Motor

14. Torque-Speed Characteristics of a Three-phase Induction Motor

15. No-Load Characteristics of a Three-phase Alternator

MA1201BS: ADVANCED CALCULUS

| Course Code | Category | Hours/ Week | | | Credits | Maximum Marks | | |
|---------------------|----------------------|---------------------------|---|---|---------|------------------|-----|-------|
| MA1201BS | Basic Sciences | L | T | P | 4 | CIE | SEE | TOTAL |
| | | 3 | 1 | 0 | | 30 | 70 | 100 |
| Contact Classes: 48 | Tutorial Classes: 16 | Practical Classes: Nil | | | | Total Classes:64 | | |

Course Objectives: To learn

1. Methods of solving the differential equations of first and higher order.
2. Evaluation of multiple integrals and their applications
3. The physical quantities involved in engineering field related to vector valued functions
4. The basic properties of vector valued functions and their applications to line, surface and volume integrals

Course Outcomes: After learning the contents of this paper, the student must be able to

1. Identify whether the given differential equation of first order is exact or not
2. Solve higher differential equation and apply the concept of differential equation to real world problems
3. Evaluate the multiple integrals and apply the concept to find areas, volumes, centre of mass and Gravity for cubes, sphere and rectangular parallelopiped
4. Evaluate the line, surface and volume integrals and converting them from one to another

UNIT-I: First Order Ordinary Differential Equations

Exact, linear and Bernoulli's equations; Applications: Newton's law of cooling, Law of natural growth and decay; Equations not of first degree: equations solvable for p, Applications: LR circuit problems.

UNIT-II: Ordinary Differential Equations of Higher Order

Second order linear differential equations with constant coefficients: Non-Homogeneous terms of the type e^{ax} , $\sin ax$, $\cos ax$, polynomials in x, $e^{ax}V(x)$ and $xV(x)$; method of variation of parameters, Applications: LCR circuit problems.

UNIT-III: Multivariable Calculus (Integration)

Evaluation of Double Integrals (Cartesian coordinates); change of order of Integration (only Cartesian form); Evaluation of triple Integrals: Change of variables (Cartesian to polar) for double and (Cartesian to Spherical and Cylindrical polar coordinates) for triple integrals. Applications: Areas (double integrals) and volumes (by double integrals and triple integrals).

UNIT-IV: Vector Differentiation

Vector point functions and scalar point functions. Gradient, Divergence and Curl. Directional derivatives, Tangent plane and normal line. Vectors Identities. Scalar potential functions. Solenoidal and Irrotational vectors.

UNIT-V: Vector Integration

Line, Surface and Volume Integrals. Theorems of Greens, Gauss and Stokes (without proofs) and their applications.

AP1202BS: APPLIED PHYSICS

| Course Code | Category | Hours/ Week | | | Credits | Maximum Marks | | |
|--------------------------------|-----------------------------|-----------------------------------|---|---|---------|-------------------------|-----|-------|
| | | L | T | P | | CIE | SEE | TOTAL |
| AP1202BS | Basic Sciences | 3 | 1 | 0 | 4 | 30 | 70 | 100 |
| Contact Classes: 48 | Tutorial Classes: 16 | Practical Classes: Nil | | | | Total Classes:64 | | |

Course Objectives:

1. Students will demonstrate skills in scientific inquiry, problem solving and laboratory techniques.
2. Students will be able to demonstrate competency and understanding of the concepts found in Quantum Mechanics, Fiber optics and lasers, Semiconductor physics and Electromagnetic theory and a broad base of knowledge in physics.
3. The graduates will be able to solve non-traditional problems that potentially draw on knowledge in multiple areas of physics.
4. To study applications in engineering like memory devices, transformer core and superconductors.

Course Outcomes: Upon graduation:

1. The student would be able to learn the fundamental concepts on Quantum behaviour of matter in its micro state.
2. The knowledge of fundamentals of Semiconductor physics, Optoelectronics, Lasers and fibre optics enable the students to apply to various systems like communications, solar cell, photo cells and so on.
3. Design, characterization and study of properties of material help the students to prepare new materials for various engineering applications.
4. The course also helps the students to be exposed to the phenomena of superconductivity and also to have exposure on magnetic materials and dielectric materials.

UNIT-I

Principles of Quantum Mechanics: Introduction to quantum physics, Black body radiation, Planck's law, Photoelectric effect, Compton effect, de-Broglie's hypothesis, Wave-particle duality, Davisson and Germer experiment, G-P Thomson experiment, Born's interpretation of the wave function, Schrodinger's time independent wave equation, Particle in one dimensional box.

UNIT-II

Semiconductor Physics: Origin of Energy Band Formation in Solids, Intrinsic and Extrinsic semiconductors, Dependence of Fermi level on carrier-concentration and temperature, Carrier transport: diffusion and drift, Hall effect, Formation of PN junction, Open circuit PN junction, Energy diagram of PN diode, I-V Characteristics of PN junction diode, Zener diode –breakdown mechanism and characteristics

UNIT-III

Physics of Semiconductor Devices: Generation & recombination mechanisms in semiconductors, LED and semiconductor lasers: Device structure, Materials,

Characteristics and figures of merit, Photo diode(PIN diode) & Solar cell - their structure, Materials, working principle and Characteristics.

UNIT-IV

Lasers: Introduction to interaction of radiation with matter, Coherence, Principle and working of Laser, Population inversion, Pumping, Types of Lasers: Ruby laser, He-Ne laser, Applications of laser-Scientific & Medical applications.

Fibre Optics: Introduction, Optical fibre as a dielectric wave guide, Total internal reflection, Acceptance angle, Acceptance cone and Numerical aperture, Step and Graded index fibres, Absorption & Bending Losses associated with optical fibres, Applications of optical fibres-Sensor & Medical Field.

UNIT-V

Dielectric Properties: Polarisation, Permittivity and Dielectric constant, Types of Polarisation, Internal fields in a solid, Clausius-Mossotti equation, Ferroelectrics and Piezoelectrics.

Magnetic Properties: Magnetisation, permeability and susceptibility, Classification of magnetic materials, Ferromagnetism and ferromagnetic domains, Hysteresis, Hard & Soft Magnetic materials, Applications of magnetic materials.

TEXT BOOKS:

1. Engineering Physics, B.K. Pandey, S. Chaturvedi - Cengage Learning.
2. Halliday and Resnick, Physics - Wiley.

CS1203ES: PROGRAMMING FOR PROBLEM SOLVING

| Course Code | Category | Hours/ Week | | | Credits | Maximum Marks | | |
|------------------------|-------------------------|---------------------------|---|---|---------|------------------|-----|-------|
| CS1203ES | Engineering Sciences | L | T | P | 4 | CI E | SEE | TOTAL |
| | | 3 | 1 | 0 | | 30 | 70 | 100 |
| Contact Classes: 48 | Tutorial Classes: 16 | Practical Classes: Nil | | | | Total Classes:64 | | |

Course Objectives:

1. To learn the fundamentals of computers.
2. To understand the various steps in program development.
3. To learn the syntax and semantics of C programming language.
4. To learn the usage of structured programming approach in solving problems.

Course Outcomes: The student will learn

1. To write algorithms and to draw flowcharts for solving problems.
2. To convert the algorithms/flowcharts to C programs.
3. To code and test a given logic in C programming language.
4. To decompose a problem into functions and to develop modular reusable code.
5. To use arrays, pointers, strings and structures to write C programs.
6. Searching and sorting problems.

UNIT - I: Introduction to Programming

Introduction to components of a computer system: disks, primary and secondary memory, processor, operating system, compilers, creating, compiling and executing a program etc., Number systems Introduction to Algorithms: steps to solve logical and numerical problems. Representation of Algorithm, Flowchart/Pseudo code with examples, Program design and structured programming Introduction to C Programming Language: variables (with data types and space requirements), Syntax and Logical Errors in compilation, object and executable code, Operators, expressions and precedence, Expression evaluation, Storage classes (auto, extern, static and register), type conversion, The main method and command line arguments
Bitwise operations: Bitwise AND, OR, XOR and NOT operators
Conditional Branching and Loops: Writing and evaluation of conditionals and consequent branching with if, if-else, switch-case, ternary operator, goto, Iteration with for, while, do-while loops
I/O: Simple input and output with scanf and printf, formatted I/O, Introduction to stdin, stdout and stderr. Command line arguments

UNIT - II: Arrays, Strings, Structures and Pointers:

Arrays: one- and two-dimensional arrays, creating, accessing and manipulating elements of arrays Strings: Introduction to strings, handling strings as array of characters, basic string functions available in C (strlen, strcat, strcpy, strstr etc.), arrays of strings

Structures: Defining structures, initializing structures, unions, Array of structures
Pointers: Idea of pointers, Defining pointers, Pointers to Arrays and Structures,
Use of Pointers in self-referential structures, usage of self-referential structures
in linked list (no implementation) Enumeration data type

UNIT - III: Preprocessor and File handling in C:

Preprocessor: Commonly used Preprocessor commands like include, define, undef, if, ifdef, ifndef
Files: Text and Binary files, Creating and Reading and writing text and binary files, appending data to existing files, Writing and reading structures using binary files, Random access using fseek, ftell and rewind functions.

UNIT - IV: Function and Dynamic Memory Allocation:

Functions: Designing structured programs, declaring a function, Signature of a function, Parameters and return type of a function, passing parameters to functions, call by value, passing arrays to functions, passing pointers to functions, idea of call by reference, Some C standard functions and libraries

Recursion: Simple programs, such as Finding Factorial, Fibonacci series etc.,
Limitations of Recursive functions

Dynamic memory allocation: Allocating and freeing memory, Allocating memory for arrays of different data types

UNIT - V: Introduction to Algorithms:

Algorithms for finding roots of a quadratic equations, finding minimum and maximum numbers of a given set, finding if a number is prime number, etc.
Basic searching in an array of elements (linear and binary search techniques),
Basic algorithms to sort array of elements (Bubble, Insertion and Selection sort algorithms), Basic concept of order of complexity through the example programs

EN1204HS: ENGLISH

| Course Code | Category | Hours/ Week | | | Credits | Maximum Marks | | |
|---------------------|-----------------------|---------------------------|---|---|---------|------------------|-----|-------|
| EN1204HS | Humanities & Sciences | L | T | P | 2 | CI E | SEE | TOTAL |
| | | 2 | 0 | 0 | | 30 | 70 | 100 |
| Contact Classes: 32 | Tutorial Classes: Nil | Practical Classes: Nil | | | | Total Classes:32 | | |

INTRODUCTION In view of the growing importance of English as a tool for global communication and the consequent emphasis on training students to acquire language skills, the syllabus of English has been designed to develop linguistic, communicative and critical thinking competencies of Engineering students. In English classes, the focus should be on the skills development in the areas of vocabulary, grammar, reading and writing. For this, the teachers should use the prescribed text for detailed study. The students should be encouraged to read the texts leading to reading comprehension and different passages may be given for practice in the class. The time should be utilized for working out the exercises given after each excerpt, and also for supplementing the exercises with authentic materials of a similar kind, for example, newspaper articles, advertisements, promotional material etc. *The focus in this syllabus is on skill development, fostering ideas and practice of language skills in various contexts and cultures.*

Learning Objectives: The course will help to a. Improve the language proficiency of students in English with an emphasis on Vocabulary, Grammar, Reading and Writing skills. b. Equip students to study academic subjects more effectively and critically using the theoretical and practical components of English syllabus. c. Develop study skills and communication skills in formal and informal situations.

Course Outcomes: Students should be able to

1. Use English Language effectively in spoken and written forms.
2. Comprehend the given texts and respond appropriately.
3. Communicate confidently in various contexts and different cultures.
4. Acquire basic proficiency in English including reading and listening comprehension, writing and speaking skills.

SYLLABUS

UNIT –I ‘The Raman Effect’ from the prescribed textbook ‘English for Engineers’ published by Cambridge University Press. **Vocabulary Building:** The Concept of Word Formation --The Use of Prefixes and Suffixes.

Grammar: Identifying Common Errors in Writing with Reference to Articles and Prepositions. **Reading:** Reading and Its Importance- Techniques for Effective Reading.

Basic Writing Skills: Sentence Structures -Use of Phrases and Clauses in Sentences- Importance of Proper Punctuation- Techniques for writing precisely – **Paragraph writing** – Types, Structures and Features of a Paragraph - Creating Coherence-Organizing Principles of Paragraphs in Documents.

UNIT –II ‘Ancient Architecture in India’ from the prescribed textbook ‘English for Engineers’ published by Cambridge University Press.

Vocabulary: Synonyms and Antonyms.

Grammar: Identifying Common Errors in Writing with Reference to Noun-pronoun Agreement and Subject-verb Agreement.

Reading: Improving Comprehension Skills – Techniques for Good Comprehension

Writing: Format of a Formal Letter-

Writing Formal Letters E.g., Letter of Complaint, Letter of Requisition, Job Application with Resume.

UNIT –III ‘Blue Jeans’ from the prescribed textbook ‘English for Engineers’ published by Cambridge University Press.

Vocabulary: Acquaintance with Prefixes and Suffixes from Foreign Languages in English to form Derivatives-Words from Foreign Languages and their Use in English.

Grammar: Identifying Common Errors in Writing with Reference to Misplaced Modifiers and Tenses. **Reading:** Sub-skills of Reading- Skimming and Scanning

Writing: Nature and Style of Sensible Writing- **Defining- Describing** Objects, Places and Events – **Classifying-** Providing Examples or Evidence

UNIT –IV ‘KING LEAR ‘a tragedy story by William Shakespeare, play synopsis of Act 1 & 2 published by Bloom, Harold. “King Lear.” Shakespeare: The Invention of the Human. New York: Riverhead, 1998.

Vocabulary: Standard Abbreviations in English Grammar: Redundancies and Clichés in Oral and Written Communication.

Reading: Comprehension- Intensive Reading and Extensive Reading

Writing: Writing Practices--Writing Introduction and Conclusion - Essay Writing- Précis Writing.

UNIT –V ‘How a Chinese Billionaire Built Her Fortune’ from the prescribed textbook ‘English for Engineers’ published by Cambridge University Press.

Vocabulary: Technical Vocabulary and their usage

Grammar: Common Errors in English

Reading: Reading Comprehension-Exercises for Practice

Writing: Technical Reports- Introduction – Characteristics of a Report – Categories of Reports

Formats- Structure of Reports (Manuscript Format) -Types of Reports - Writing aReport.

Textbook:

1. Sudarshana, N.P. and Savitha, C. (2018). English for Engineers. Cambridge University Press.
2. Nahum Tate's 1681 Adaption of King Lear

List of Experiments:

1. Energy gap of P-N junction diode: To determine the energy gap of a semiconductor diode.
2. Solar Cell: To study the V-I Characteristics of solar cell.
3. Light emitting diode: Plot V-I and P-I characteristics of light emitting diode.
4. Stewart – Gee’s experiment: Determination of magnetic field along the axis of a current carrying coil.
5. Hall effect: To determine Hall co-efficient of a given semiconductor.
6. Photoelectric effect: To determine work function of a given material.
7. LASER: To study the characteristics of LASER sources.
8. Optical fibre: To determine the bending losses of Optical fibres.
9. LCR Circuit: To determine the Quality factor of LCR Circuit.
10. R-C Circuit: To determine the time constant of R-C circuit.

Note: Any 8 experiments are to be performed

CS1206ES: PROGRAMMING FOR PROBLEM SOLVING LAB

| Course Code | Category | Hours/ Week | | | Credits | Maximum Marks | | |
|-------------------------|-----------------------|-----------------------|---|---|------------------|---------------|-----|-------|

[Note: The programs may be executed using any available Open Source/ Freely available IDE Some of the Tools available are:

CodeLite:

<https://codelite.org/>

Code::Blocks:

<http://www.codeblocks.org/>

DevCpp :

<http://www.bloodshed.net/devcpp>

.htmlEclipse:

<http://www.eclipse.org>

This list is not exhaustive and is NOT in any order of preference]

Course Objectives: The students will learn the following:

- To work with an IDE to create, edit, compile, run and debug programs
- To analyze the various steps in program development.
- To develop programs to solve basic problems by understanding basic concepts in Clike operators, control statements etc.
- To develop modular, reusable and readable C Programs using the concepts like functions, arrays etc.
- To Write programs using the Dynamic Memory Allocation concept.
- To create, read from and write to text and binary files

Course Outcomes: The candidate is expected to be able to:

- formulate the algorithms for simple problems
- translate given algorithms to a working and correct program
- correct syntax errors as reported by the compilers
- identify and correct logical errors encountered during execution
- represent and manipulate data with arrays, strings and structures
- use pointers of different types
- create, read and write to and from simple text and binary files
- modularize the code with functions so that they can be reused

Practice sessions:

- a. Write a simple program that prints the results of all the operators available in C (including pre/ post increment, bitwise and/or/not, etc.). Read required operand values from standard input.
- b. Write a simple program that converts one given data type to another using auto conversion and casting. Take the values from standard input.

Simple numeric problems:

- a. Write a program for finding the max and min from the three numbers.
- b. Write the program for the simple, compound interest.
- c. Write program that declares Class awarded for a given percentage of marks, where mark <40%= Failed, 40% to <60% = Second class, 60% to <70%=First class, >= 70% = Distinction. Read percentage from standard input.
- d. Write a program that prints a multiplication table for a given number and the number of rows in the table. For example, for a number 5 and rows = 3, the output should be:
 - e. $5 \times 1 = 5$
 - f. $5 \times 2 = 10$
 - g. $5 \times 3 = 15$
- h. Write a program that shows the binary equivalent of a given positive number between 0 to 255.

Expression Evaluation:

- a. A building has 10 floors with a floor height of 3 meters each. A ball is dropped from the top of the building. Find the time taken by the ball to reach each floor. (Use the formula $s = ut + \frac{1}{2}at^2$ where u and a are the initial velocity in m/sec ($= 0$) and acceleration in m/sec^2 ($= 9.8 \text{ m/s}^2$)).
- b. Write a C program, which takes two integer operands and one operator from the user, performs the operation and then prints the result. (Consider the operators +, -, *, /, % and use Switch Statement)
- c. Write a program that finds if a given number is a prime number
- d. Write a C program to find the sum of individual digits of a positive integer and test given number is palindrome.
- e. A Fibonacci sequence is defined as follows: the first and second terms in the sequence are 0 and 1. Subsequent terms are found by adding the preceding two terms in the sequence. Write a C program to generate the first n terms of the sequence.
- f. Write a C program to generate all the prime numbers between 1 and n , where n is a value supplied by the user.
- g. Write a C program to find the roots of a Quadratic equation.
- h. Write a C program to calculate the following, where x is a fractional value.
 - i. $1 - x/2 + x^2/4 - x^3/6$
 - j. Write a C program to read in two numbers, x and n , and then compute the sum of this geometric progression: $1 + x + x^2 + x^3 + \dots + x^n$. For example: if n is 3 and x is 5, then the program computes $1 + 5 + 25 + 125$.

Arrays and Pointers and Functions:

- a. Write a C program to find the minimum, maximum and average in an array of integers.
- b. Write a function to compute mean, variance, Standard Deviation, sorting of elements in single dimension array.
- c. Write a C program that uses functions to perform the following:
 - d. Addition of Two Matrices
 - e. ii. Multiplication of Two Matrices
 - f. iii. Transpose of a matrix with memory dynamically allocated for the new matrix as row and column counts may not be same.
- g. Write C programs that use both recursive and non-recursive functions
- h. To find the factorial of a given integer.
 - i. ii. To find the GCD (greatest common divisor) of two given integers.
 - j. iii. To find x^n
- k. Write a program for reading elements using pointer into array and display the values using array.
- l. Write a program for display values reverse order from array using pointer.
- m. Write a program through pointer variable to sum of n elements from array.

Files:

- a. Write a C program to display the contents of a file to standard output device.
- b. Write a C program which copies one file to another, replacing all lowercase characters with their uppercase equivalents.
- c. Write a C program to count the number of times a character occurs in a text file. The file name and the character are supplied as command line arguments.
- d. Write a C program that does the following:

It should first create a binary file and store 10 integers, where the file name and 10 values are given in the command line. (hint: convert the strings using atoi function) Now the program asks for an index and a value from the user and the value at that index should be changed to the new value in the file. (hint: use fseek function)

The program should then read all 10 values and print them back.

- e. Write a C program to merge two files into a third file (i.e., the contents of the first file followed by those of the second are put in the third file).

Strings:

- a. Write a C program to convert a Roman numeral ranging from I to L to its decimal equivalent.
- b. Write a C program that converts a number ranging from 1 to 50 to Roman equivalent
- c. Write a C program that uses functions to perform the following operations:
 - d. To insert a sub-string into a given main string from a given position.
 - e. ii. To delete n Characters from a given position in a given string.

- f. Write a C program to determine if the given string is a palindrome or not (Spelled same in both directions with or without a meaning like madam, civic, noon, abcba, etc.)
- g. Write a C program that displays the position of a character ch in the string S or - 1 if S doesn't contain ch.
- h. Write a C program to count the lines, words and characters in a given text.

Miscellaneous:

- a. Write a menu driven C program that allows a user to enter n numbers and then choose between finding the smallest, largest, sum, or average. The menu and all the choices are to be functions. Use a switch statement to determine what action to take. Display an error message if an invalid choice is entered.
- b. Write a C program to construct a pyramid of numbers as follows:

```

      1          *          1          1          *
    1 2        **        2 3        2 2        **
   1 2 3      ***      4 5 6      3 3 3      ***
                                   4 4 4 4      **
                                           *
```

Sorting and Searching:

- a. Write a C program that uses non recursive function to search for a Key value in an array
- b. list of integers using linear search method.
- c. Write a C program that uses non recursive function to search for a Key value in an array
- d. sorted list of integers using binary search method.
- e. Write a C program that implements the Bubble sort method to sort a given list of
- f. integers in ascending order.
- g. Write a C program that sorts the given array of integers using selection sort in descending order
- h. Write a C program that sorts the given array of integers using insertion sort in ascending order
- i. Write a C program that sorts a given array of names

EN1207HS: ENGLISH LANGUAGE AND COMMUNICATION SKILLS LAB

| Course Code | Category | Hours/ Week | | | Credits | Maximum Marks | | |
|-------------------------|-----------------------|-----------------------|---|---|------------------|---------------|-----|-------|
| EN1207HS | Humanities & Sciences | L | T | P | 1 | CI E | SEE | TOTAL |
| | | 0 | 0 | 2 | | 30 | 70 | 100 |
| Contact Classes: Nil | Tutorial Classes: Nil | Practical Classes: 32 | | | Total Classes:32 | | | |

The **Language Lab** focuses on the production and practice of sounds of language and familiarizes the students with the use of English in everyday situations both in formal and informal contexts.

Course Objectives:

1. To facilitate computer-assisted multi-media instruction enabling individualized and independent language learning
2. To sensitize students to the nuances of English speech sounds, word accent, intonation and rhythm
3. To bring about a consistent accent and intelligibility in students' pronunciation of English by providing an opportunity for practice in speaking
4. To improve the fluency of students in spoken English and neutralize their mother tongue influence
5. To train students to use language appropriately for public speaking and interviews

Learning Outcomes: Students will be able to attain

1. Better understanding of nuances of English language through audio- visual experience and group activities
2. Neutralization of accent for intelligibility
3. Speaking skills with clarity and confidence which in turn enhances their employability skills

Syllabus

English Language and Communication Skills Lab (ELCS) shall have two parts:

a. Computer Assisted Language Learning (CALL) Lab

b. Interactive Communication Skills (ICS) Lab

Listening Skills

Objectives

1. To enable students, develop their listening skills so that they may appreciate its role in the LSRW skills approach to language and improve their pronunciation
2. To equip students with necessary training in listening so that they can comprehend the speech of people of different backgrounds and regions

Students should be given practice in listening to the sounds of the language, to be able to recognize them and find the distinction between different sounds, to be able to mark stress and recognize and use the right intonation in sentences.

- Listening for general content
- Listening to fill up information

- Intensive listening
- Listening for specific information

Speaking Skills

Objectives

1. To involve students in speaking activities in various contexts
2. To enable students express themselves fluently and appropriately in social and professional contexts
 - Oral practice: Just A Minute (JAM) Sessions
 - Describing objects/situations/people
 - Role play – Individual/Group activities

The following course content is prescribed for the English Language and Communication Skills Lab based on Unit-6 of AICTE Model Curriculum 2018 for B.Tech First English. As the syllabus is very limited, it is required to prepare teaching/learning materials by the teachers collectively in the form of handouts based on the needs of the students in their respective colleges for effective teaching/learning and timesaving in the Lab)

Exercise – I

CALL Lab: *Understand:* Listening Skill- Its importance – Purpose- Process- Types- Barriers of Listening. *Practice:* Introduction to Phonetics – Speech Sounds – Vowels and Consonants.

ICS Lab: *Understand:* Communication at Work Place- Spoken vs. Written language. *Practice:* Ice-Breaking Activity and JAM Session- Situational Dialogues – Greetings – Taking Leave – Introducing Oneself and Others.

Exercise – II

CALL Lab: *Understand:* Structure of Syllables – Word Stress and Rhythm– Weak Forms and Strong Forms in Context. *Practice:* Basic Rules of Word Accent - Stress Shift - Weak Forms and Strong Forms in Context.

ICS Lab: *Understand:* Features of Good Conversation – Non-verbal Communication. *Practice:* Situational Dialogues – Role-Play- Expressions in Various Situations –Making Requests and Seeking Permissions - Telephone Etiquette.

Exercise - III

CALL Lab: *Understand:* Intonation-Errors in Pronunciation-the Influence of Mother Tongue (MTI).

Practice: Common Indian Variants in Pronunciation – Differences in British and American Pronunciation.

ICS Lab: *Understand:* How to make Formal Presentations. *Practice:* Formal Presentations.

Exercise – IV

CALL Lab: *Understand:* Listening for General Details. *Practice:* Listening Comprehension Tests.

ICS Lab: *Understand:* Public Speaking – Exposure to Structured Talks. *Practice:* Making a Short Speech – Extempore.

Exercise – V

CALL Lab: *Understand:* Listening for Specific Details. *Practice:* Listening Comprehension Tests.

ICS Lab: *Understand:* Interview Skills. *Practice:* Mock Interviews.

Minimum Requirement of infrastructural facilities for ELCS Lab:

1. Computer Assisted Language Learning (CALL) Lab:

The Computer Assisted Language Learning Lab has to accommodate 40 students with 40 systems, with one Master Console, LAN facility and English language learning software for self- study by students.

System Requirement (Hardware component): *Computer network with LAN facility (minimum 40 systems with multimedia) with the following specifications:*

- i) Computers with Suitable Configuration
- ii) High Fidelity Headphones

2. Interactive Communication Skills (ICS) Lab:

The Interactive Communication Skills Lab: A Spacious room with movable chairs and audio-visual aids with a Public-Address System, a LCD and a projector etc.

**MC1001ES*: ENVIRONMENTAL SCIENCE
(MANDATORY NON-CREDIT COURSE)**

| Course Code | Category | Hours/ Week | | | Credits | Maximum Marks | | |
|--------------------------------|---------------------------------|---------------------------------|---|---|---------|-------------------------|-----|-------|
| MC1001ES* | Humanities & Sciences | L | T | P | 1 | CI E | SEE | TOTAL |
| | | 0 | 0 | 2 | | 30 | 70 | 100 |
| Contact Classes: Nil | Tutorial Classes: Nil | Practical Classes: 32 | | | | Total Classes:32 | | |

Course Objectives:

1. Understanding the importance of ecological balance for sustainable development.
2. Understanding the impacts of developmental activities and mitigation measures.
3. Understanding the environmental policies and regulations

Course Outcomes:

Based on this course, the Engineering graduate will understand /evaluate / develop technologies on the basis of ecological principles and environmental regulations which in turn helps in sustainable development

UNIT-I

Ecosystems: Definition, Scope, and Importance of ecosystem. Classification, structure, and function of an ecosystem, Food chains, food webs, and ecological pyramids. Flow of energy, Biogeochemical cycles, Bioaccumulation, Biomagnifications, ecosystem value, services and carrying capacity, Field visits.

UNIT-II

Natural Resources: Classification of Resources: Living and Non-Living resources, **water resources:** use and over utilization of surface and ground water, floods and droughts, Dams: benefits and problems. **Mineral resources:** use and exploitation, environmental effects of extracting and using mineral resources, **Land resources:** Forest resources, **Energy resources:** growing energy needs, renewable and non-renewable energy sources, use of alternate energy source, case studies.

UNIT-III

Biodiversity And Biotic Resources: Introduction, Definition, genetic, species and ecosystem diversity. Value of biodiversity; consumptive use, productive use, social, ethical, aesthetic and optional values. India as a mega diversity nation, Hot spots of biodiversity. Field visit. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts; conservation of biodiversity: In-Situ and Ex-situ conservation. National Biodiversity act.

UNIT-IV

Environmental Pollution and Control Technologies: Environmental Pollution: Classification of pollution, **Air Pollution:** Primary and secondary pollutants, Automobile and Industrial pollution, Ambient air quality standards. **Water pollution:** Sources and types of pollution, drinking water quality standards.

Soil Pollution: Sources and types, Impacts of modern agriculture, degradation of soil. **Noise Pollution:** Sources and Health hazards, standards, **Solid waste:** Municipal Solid Waste management, composition and characteristics of e-Waste and its management. **Pollution control technologies:** Wastewater Treatment methods: Primary, secondary and Tertiary.

Overview of air pollution control technologies, Concepts of bioremediation. **Global Environmental Issues and Global Efforts:** Climate change and impacts on human environment. Ozone depletion and Ozone depleting substances (ODS). Deforestation and desertification. International conventions / Protocols: Earth summit, Kyoto protocol, and Montréal Protocol. NAPCC-GoI Initiatives.

UNIT-V

Environmental Policy, Legislation & EIA: Environmental Protection act, Legal aspects Air Act- 1981, Water Act, Forest Act, Wild life Act, Municipal solid waste management and handling rules, biomedical waste management and handling rules, hazardous waste management and handling rules. EIA: EIA structure, methods of baseline data acquisition. Overview on Impacts of air, water, biological and Socio-economical aspects. Strategies for risk assessment, Concepts of Environmental Management Plan (EMP). **Towards Sustainable Future:** Concept of Sustainable Development Goals, Population and its explosion, Crazy Consumerism, Environmental Education, Urban Sprawl, Human health, Environmental Ethics, Concept of Green Building, Ecological Foot Print, Life Cycle assessment (LCA), Low carbon life style.

TEXT BOOKS:

1. Textbook of Environmental Studies for Undergraduate Courses by Erach Bharucha for University Grants Commission.
2. Environmental Studies by R. Rajagopalan, Oxford University Press.

REFERENCE BOOKS:

1. Environmental Science: towards a sustainable future by Richard T. Wright. 2008 PHL Learning Private Ltd. New Delhi.
2. Environmental Engineering and science by Gilbert M. Masters and Wendell P. Ela. 2008 PHI Learning Pvt. Ltd.
3. Environmental Science by Daniel B. Botkin & Edward A. Keller, Wiley INDIA edition.
4. Environmental Studies by Anubha Kaushik, 4th Edition, New age international publishers.
5. Text book of Environmental Science and Technology - Dr. M. Anji Reddy 2007, BS Publications.
Introduction to Environmental Science by Y. Anjaneyulu, BS.

AM2101PC: DISCRETE MATHEMATICS

| II-I: CSE(AI&ML) | | | | | | | | |
|---|---------------------|-------------------------|---|---|------------------|-----------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM2101PC | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | Total Classes:60 | | | |
| Prerequisites: An understanding of Mathematics in general is sufficient | | | | | | | | |

CourseObjectives

- Introduces the elementary discrete mathematics for computer science and engineering.
- Topics include formal logic notation, methods of proof, induction, sets, relations, graph theory, permutations and combinations, counting principles; recurrence relations and generating functions.

CourseOutcomes:

- Ability to understand and construct precise mathematical proofs
- Ability to use logic and set theory to formulate precise statements
- Ability to analyze and solve counting problems on finite and discrete structures
- Ability to describe and manipulate sequences
- Ability to apply graph theory in solving computing problems

UNIT-I

The Foundations: Logic and Proofs: Propositional Logic, Applications of Propositional Logic, Propositional Equivalence, Predicates and Quantifiers, Nested Quantifiers, Rules of Inference, Introduction to Proofs, Proof Methods and Strategy.

UNIT-II

Basic Structures, Sets, Functions, Sequences, Sums, Matrices and Relations Sets, Functions, Sequences & Summations, Cardinality of Sets and Matrices Relations, Relations and Their Properties, n-ary Relations and Their Applications, Representing Relations, Closures of Relations, Equivalence Relations, Partial Orderings.

UNIT-III

Algorithms, Induction and Recursion: Algorithms, The Growth of Functions, Complexity of Algorithms

Induction and Recursion: Mathematical Induction, Strong Induction and Well-Ordering, Recursive Definitions and Structural Induction, Recursive Algorithms, Program Correctness

UNIT-IV

Discrete Probability and Advanced Counting Techniques: An Introduction to Discrete Probability, Probability Theory, Bayes' Theorem, Expected Value and Variance

Advanced Counting Techniques: Recurrence Relations, Solving Linear Recurrence Relations, Divide – and – Conquer Algorithms and Recurrence Relations, Generating Functions, Inclusion - Exclusion, Applications of Inclusion - Exclusion

UNIT-V

Graphs: Graphs and Graph Models, Graph Terminology and Special Types of Graphs, Representing Graphs and Graph Isomorphism, Connectivity, Euler and Hamilton Paths, Shortest – Path Problems, Planar Graphs, Graph Coloring.

Trees: Introduction to Trees, Applications of Trees, Tree Traversal, Spanning Trees, Minimum Spanning Trees

TEXT BOOK:

1. Discrete Mathematics and its Applications with Combinatorics and Graph Theory- Kenneth H.Rosen, 7th Edition, TMH.

REFERENCES BOOKS:

1. Discrete Mathematical Structures with Applications to Computer Science - J.P. Tremblay and R. Manohar, TMH,
2. Discrete Mathematics for Computer Scientists & Mathematicians: Joe L. Mott, Abraham Kandel, Theodore P. Baker, 2nd ed, Pearson Education.
3. Discrete Mathematics- Richard Johnsonbaugh, 7th Edn., Pearson Education.
4. Discrete Mathematics with Graph Theory- Edgar G. Goodaire, Michael M. Parmenter.
5. Discrete and Combinatorial Mathematics – an applied introduction: Ralph.P. Grimald, 5th edition, Pearson Education.

AM2102PC: DATA STRUCTURES

| II-I: CSE(AI&ML) | | | | | | | | |
|---|------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM2102PC | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 1 | 0 | 4 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: A course on “Programming for Problem Solving”. | | | | | | | | |

Course Objectives:

- Exploring basic data structures such as stacks and queues.
- Introduces a variety of data structures such as hash tables, search trees, tries, heaps, graphs.
- Introduces sorting and pattern matching algorithms.

Course Outcomes:

- Ability to select the data structures that efficiently model the information in a problem.
- Ability to assess efficiency trade offs among different data structure implementations or combinations.
- Implement and know the application of algorithms for sorting and pattern matching.
- Design programs using a variety of data structures, including hash tables, binary and general tree structures, search trees, tries, heaps, graphs, and AVL-trees.

UNIT-I

Introduction to Data Structures, abstract data types, Linear list – singly linked list implementation, insertion, deletion and searching operations on linear list, Stacks-Operations, array and linked representations of stacks, stack applications, Queues-operations, array and linked representations.

UNIT-II

Dictionaries: linear list representation, skip list representation, operations - insertion, deletion and searching.

HashTableRepresentation: hash functions, collision resolution-separate chaining, open addressing- linear probing, quadratic probing, double hashing, rehashing, extendible hashing.

UNIT-III

Search Trees: Binary Search Trees, Definition, Implementation, Operations- Searching, Insertion and Deletion, AVL Trees, Definition, Height of an AVL Tree, Operations- Insertion, Deletion and Searching, Red –Black, Splay Trees.

UNIT-IV

Graphs: Graph Implementation Methods. Graph Traversal Methods.

Sorting: HeapSort External Sorting- Model for external sorting, MergeSort.

UNIT-V

Pattern Matching and Tries: Pattern matching algorithms- Brute force, the Boyer –Moore algorithm, the Knuth-Morris- Pratt algorithm, Standard Tries, Compressed Tries, Suffix tries.

TEXT BOOKS:

1. Fundamentals of Data Structures in C, 2nd Edition, E. Horowitz, S. Sahni and Susan Anderson Freed, Universities Press.
2. Data Structures using C A.S. Tanenbaum, Y. Langsam, and M.J. Augenstein, PHI/ Pearson Education.

REFERENCE BOOK:

1. Data Structures: A Pseudo code Approach with C, 2nd Edition, R.F. Gilberg and B.A. Forouzan, Cengage Learning.

MA2103BS: Computer Oriented Statistical Methods

B.Tech. II Year I Semester

| Course Code | Category | Hours/ Week | | | Credits | Maximum Marks | | |
|------------------------|----------------------|---------------------------|---|---|---------|------------------|-----|-------|
| | | L | T | P | | CIA | SEE | TOTAL |
| MA2103BS | Basic Sciences | 3 | 1 | 0 | 4 | 30 | 70 | 100 |
| Contact Classes: 48 | Tutorial Classes: 16 | Practical Classes: Nil | | | | Total Classes:64 | | |

Course Objectives: To learn

1. The theory of Probability, and probability distributions of single and multiple random variables
2. The sampling theory and testing of hypothesis and making inferences

Course Outcomes: After learning the contents of this paper, the student must be able to

1. Apply the concepts of probability and distributions to some case studies
2. Correlate the material of one unit to the material in other units
3. Resolve the potential misconceptions and hazards in each topic of study.

UNIT I: Probability

Sample space, Events, Counting Sample points, probability of an event, additive rules, conditional probability, independent events, product rule and Bayes theorem. Random variables: Discrete and continuous random variables, Expectation of random variables, Moments, variance of random variables.

UNIT II: Mathematical Expectation

Mean of a Random variable, variance and covariance of Random variables, Means and variances of linear combinations of random variables, Chebyshevs theorem.

Discrete Probability Distributions: Introduction and motivation, Binomial distribution, Geometric distribution and Poisson distribution.

UNIT III: Continuous Probability Distributions:

Continuous uniform distribution, Normal distribution, areas under the normal curve, applications of the normal distribution, normal approximation to the Binomial, Gamma and exponential distributions.

Fundamental sampling distributions: Random sampling, some important statistics, sampling distributions, sampling distribution of Means and the central limit theorem, sampling distribution of S^2 , t- distribution, F- distribution.

UNIT IV: Testing of Hypothesis - Large sample

Tests of hypothesis - null hypothesis, alternate hypothesis, type I, type II errors, critical region. Inferences concerning means and proportions- large samples- test of hypothesis for single mean and difference between the means. Test of hypothesis for the proportions- single and difference between the proportions, confidence interval for the mean and proportions.

UNIT V: Correlation and Regression

Coefficient of correlation, regression coefficient, the lines of regression, rank correlation

TEXT BOOKS:

1. Ronald E. Walpole, Raymond H. Myers, Sharon L. Myers, Keying Ye, Probability & Statistics for Engineers & Scientists, 9th Ed. Pearson Publishers.
2. S C Gupta and V K Kapoor, Fundamentals of Mathematical statistics, Khanna publications.
3. S. D. Sharma, Operations Research, Kedarnath and Ramnath Publishers, Meerut, Delhi

REFERENCE BOOKS:

1. T.T. Soong, Fundamentals of Probability and Statistics for Engineers, John Wiley & Sons Ltd, 2004.

AM2104PC: COMPUTER ORGANIZATION AND ARCHITECTURE

| II-I: CSE(AI&ML) | | | | | | | | |
|--|------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM2104PC | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: A Course on “Digital Logic Design and Micro processors” | | | | | | | | |

Course Objectives:

- The purpose of the course is to introduce principles of computer organization and the basic architectural concepts.
- It begins with basic organization, design, and programming of a simple digital computer and introduces simple register transfer language to specify various computer operations.
- Topics include computer arithmetic, instruction set design, micro programmed control unit, pipelining and vector processing, memory organization and I/O systems, and multiprocessors

Course Outcomes:

- Understand the basics of instructions sets and their impact on processor design.
- Demonstrate an understanding of the design of the functional units of a digital computer system.
- Evaluate cost performance and design trade offs in designing and constructing a computer processor including memory.
- Design a pipeline for consistent execution of instructions with minimum hazards.
- Recognize and manipulate representations of numbers stored in digital computers.

UNIT-I

Digital Computers: Introduction, Block diagram of Digital Computer, Definition of Computer Organization, Computer Design and Computer Architecture.

Register Transfer Language and Micro operations: Register Transfer language, Register Transfer Bus and memory transfers, Arithmetic Micro operations, logic micro-operations, shift micro-operations, Arithmetic logic shift unit.

Basic Computer Organization and Design: Instruction codes, Computer Registers Computer instructions, Timing and Control, Instruction cycle, Memory Reference Instructions, Input – Output and Interrupt.

UNIT-II

Microprogrammed Control: Control memory, Address sequencing, micro program example, design of control unit.

Central Processing Unit: General Register Organization, Instruction Formats, Addressing modes, Data Transfer and Manipulation, Program Control.

UNIT-III

Data Representation: Datatypes, Complements, Fixed Point Representation, Floating Point Representation.

Computer Arithmetic: Addition and subtraction, multiplication Algorithms, Division Algorithms, Floating-point Arithmetic operations. Decimal Arithmetic unit, Decimal Arithmetic operations.

UNIT-IV

Input-Output Organization: Input-Output Interface, Asynchronous data transfer, Modes of Transfer, Priority Interrupt Direct memory Access.

Memory Organization: Memory Hierarchy, Main Memory, Auxiliary memory, Associate Memory, Cache Memory.

UNIT-V

Reduced Instruction Set Computer: CISC Characteristics, RISC Characteristics.

Pipeline and Vector Processing: Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction Pipeline, RISC Pipeline, Vector Processing, Array Processor.

Multi Processors: Characteristics of Multiprocessors, inter connection Structures, inter processor arbitration, Inter processor communication and synchronization, Cache Coherence.

TEXT BOOK:

1. Computer System Architecture – M. Moris Mano, Third Edition, Pearson/PHI.

REFERENCE BOOKS:

1. Computer Organization – Car Hamacher, Zvonks Vranesic, Safea Zaky, Vth Edition, McGraw Hill.
2. Computer Organization and Architecture – William Stallings Sixth Edition, Pearson/ PHI. Structured Computer Organization – Andrew S. Tanenbaum, 4th Edition, PHI/Pearson

AM2105PC: PYTHON PROGRAMMING

| II-I: CSE(AI&ML) | | | | | | | | |
|---|------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM2105PC | Core | L | T | P | C | CIE | SEE | Total |
| | | 2 | 0 | 0 | 2 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Pre requisites: A course on “Programming for Problem Solving using C” | | | | | | | | |

Course Objectives:

- Learn Syntax and Semantics and create Functions in Python.
- Handle Strings and Files in Python.
- Understand Lists, Dictionaries and Regular expressions in Python.
- Implement Object Oriented Programming concepts in Python.
- Build Web Services and introduction to Network and Database Programming in Python.

Course Outcomes:

- Examine Python syntax and semantics and be fluent in the use of Python flow control and functions.
- Demonstrate proficiency in handling Strings and File Systems.
- Create, run and manipulate Python Programs using core data structures like Lists, Dictionaries and use Regular Expressions.
- Interpret the concepts of Object- Oriented Programming as used in Python.
- Implement exemplary applications related to Network Programming, Web Services and Data bases in Python.

UNIT-I

Python Basics, Objects- Python Objects, Standard Types, Other Built-in Types, Internal Types, Standard Type Operators, Standard Type Built-in Functions, Categorizing the Standard Types, Unsupported Types Numbers - Introduction to Numbers, Integers, Floating Point Real Numbers, Complex Numbers, Operators, Built-in Functions, Related Modules Sequences- Strings, Lists, and Tuples, Mapping and Set Types

UNIT-II

FILES: File Objects, File Built-in Function [open ()], File Built-in Methods, File Built-in Attributes, Standard Files, Command-line Arguments, FileSystem, File Execution, Persistent Storage Modules, Related Modules

Exceptions: Exceptions in Python, Detecting and Handling Exceptions, Context Management,

*Exceptions as Strings, Raising Exceptions, Assertions, Standard Exceptions, *Creating Exceptions, Why Exceptions (Now) ?, Why Exceptions at All?, Exceptions and the sysModule, Related Modules Modules: Modules and Files, Namespaces, Importing Modules, Importing Module Attributes, Module Built-in Functions, Packages, Other Features of Modules

UNIT-III

Regular Expressions: Introduction, Special Symbols and Characters, Res and Python Multi threaded Programming: Introduction, Threas and Processes, Python, Threads, and the Global Interpreter Lock, Thread Module, Threading Module, Related Modules

UNIT-IV

GUI Programming: Introduction, Tkinter and Python Programming, Brief Tour of Other GUIs, RelatedModulesand OtherGUIs WEB Programming: Introduction, Wed Surfing with Python, Creating Simple Web Clients, AdvancedWebClients, CGI-Helping Servers Process Client Data, Building CGI Application Advanced CGI, Web (HTTP) Servers

UNIT-V

DatabaseProgramming: Introduction, Python Database Application Programmer's Interface (DB-API), Object Relational Managers (ORMs), RelatedModules

TEXT BOOK:

1. Core Python Programming, Wesley J. Chun, Second Edition, Pearson

REFERENCE BOOKS:

1. Think Python, Allen Downey, Green TeaPress
2. Introduction to Python, Kenneth A. Lambert, Cengage
3. Python Programming: A Modern Approach, VamsiKurama, Pearson
4. Learning Python, Mark Lutz, O'Really.

SM2106MS: BUSINESS ECONOMICS AND FINANCIAL ANALYSIS

| II-I: CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| SM2106MS | Foundation | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: None | | | | | | | | |

Course Objective:

- To learn the basic Business types, impact of the Economy on Business and Firmsspecifically.'
- To analyze theBusinessfromtheFinancialPerspective.

Course Outcome:

- The students will understand the various Forms of Business and the impact of economic variables on the Business.
- The Demand, Supply, Production, Cost, MarketStructure, Pricing aspects are learnt.
- The students can study the firm's financial position by analyzing the Financial Statements of a Company.

UNIT-I

IntroductiontoBusinessandEconomics:

Business: Structure of Business Firm, Theory of Firm, Types of Business Entities, Limited Liability Companies, Sources of Capital for a Company, Non-Conventional Sources of Finance.

Economics: Significance of Economics, Micro and Macro Economic Concepts, Concepts and Importance of National Income, Inflation, Money Supply in Inflation, Business Cycle, Features and Phases of Business Cycle. Nature and Scope of Business Economics, Role of Business Economist, Multi disciplinary nature ofBusinessEconomics.

UNIT-II

Demand and Supply Analysis:

Elasticity of Demand: Elasticity, Types of Elasticity, Law of Demand, Measurement and Significanceof Elasticity of Demand, Factors affecting

Elasticity of Demand, Elasticity of Demand in decision making, Demand Forecasting: Characteristics of Good Demand Forecasting, Steps in Demand Forecasting, Methods of Demand Forecasting.

Supply Analysis: Determinants of Supply, Supply Function & Law of Supply.

UNIT-III

Production, Cost, Market Structures & Pricing:

Production Analysis: Factors of Production, Production Function, Production Function with one variable input, two variable inputs, Returns to Scale, Different Types of Production Functions.

Cost analysis: Types of Costs, Short run and long run Cost Functions.

Market Structures: Nature of Competition, Features of Perfect competition, Monopoly, Oligopoly, Monopolistic Competition.

Pricing: Types of Pricing, Product Life Cycle based Pricing, Break Even Analysis, Cost Volume Profit Analysis.

UNIT-IV

Financial Accounting: Accounting concepts and Conventions, Accounting Equation, Double-Entry system of Accounting, Rules for maintaining Books of Accounts, Journal, Posting to Ledger, Preparation of Trial Balance, Elements of Financial Statements, and Preparation of Final Accounts.

UNIT-V

Financial Analysis through Ratios: Concept of Ratio Analysis, Liquidity Ratios, Turn over Ratios, Profitability Ratios, Proprietary Ratios, Solvency, Leverage Ratios (simple problems). Introduction to Fund Flow and Cash Flow Analysis (simple problems).

TEXT BOOKS:

1. D.D. Chaturvedi, S.L. Gupta, Business Economics-Theory and Applications, International Book House Pvt.Ltd.2013.
2. Dhanesh KKhatri, Financial Accounting, Tata Mc GrawHill,2011.
3. Geethika Ghosh, PiyaliGosh, Purba RoyChoudhury, Managerial Economics, 2e, Tata McGrawHill Education Pvt.Ltd.2012.

REFERENCE BOOKS:

1. Paresh Shah, Financial Accounting for Management 2e, OxfordPress,2015.
2. S.N. Maheshwari, Sunil KMaheshwari, Sharad KMaheshwari, FinancialAccounting,5e, Vikas Publications,2013.

AM2107PC: DATA STRUCTURES LAB

II-I:CSE(AI&ML)

| Course Code | Category | Hours/Week | | | Credits | Max Marks | | |
|---------------------------------|-------------------------|-----------------------|---|---|---------|------------------|-----|-------|
| AM2107PC | Core | L | T | P | C | CIE | SEE | Total |
| | | 0 | 0 | 2 | 1 | 30 | 70 | 100 |
| Contact Classes:NIL | Tutorial classes:NIL | Practical classes: 36 | | | | Total Classes:36 | | |
| Prerequisites: No Prerequisites | | | | | | | | |

Course Objectives:

- It covers various concepts of C programming language
- It introduces searching and sorting algorithms
- It provides an understanding of data structures such as stacks and queues.

Course Outcomes:

- Ability to develop C programs for computing and real-life applications using basic elements like control statements, arrays, functions, pointers and strings, and data structures like stacks, queues and linkedlists.
- Ability to Implement searching and sorting algorithms

List of Experiments

1. Write a program that uses functions to perform the following operations on singly linked list.:
i)Creation ii)Insertion iii)Deletion iv)Traversal
2. Write a program that uses functions to perform the following operations on doubly linkedlist.:
i) Creation ii)Insertion iii)Deletion
iv)Traversal
3. Write a program that uses functions to perform the following operations on circular linked list.:
i)Creation ii)Insertion iii)Deletion iv)Traversal
4. Write a program that implement stack (its operations) using
i)Arrays ii)Pointers
5. Write a program that implement Queue (its operations)using
i)Arrays ii)Pointers
6. Write a program that implements the following sorting methods to sort a given list of integers in ascending order
i)Bubblesort ii)Selectionsort iii)Insertionsort

7. Write a program that use both recursive and non-recursive functions to perform the following searching operations for a key value in a given list of integers:
i) Linearsearch ii) Binarysearch
8. Write a program to implement the tree traversal methods.
9. Write a program to implement the graph traversal methods.

TEXT BOOKS:

1. Fundamentals of Data Structures in C, 2nd Edition, E. Horowitz, S. Sahni and Susan Anderson Freed, *UniversitiesPress*.
2. Data Structures using C–A.S. Tanenbaum, Y. Langsam, and M.J. Augenstein,
3. *PHI/PearsonEducation*.

REFERENCE BOOK:

1. A Pseudo code Approach with C, 2nd Edition, R.F. Gilbergand B.A. Forouzan, Cengage Learning

AM2108PC: PYTHON PROGRAMMING LAB

| II-I:CSE(AI&ML) | | | | | | | | |
|---------------------------------|-------------------------|-----------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM2108PC | Core | L | T | P | C | CIE | SEE | Total |
| | | 0 | 0 | 2 | 1 | 30 | 70 | 100 |
| Contact Classes:NIL | Tutorial classes:NIL | Practical classes: 36 | | | | Total Classes:36 | | |
| Prerequisites: No Prerequisites | | | | | | | | |

Course Objectives

- To be able to introduce core programming basics and program design with functions using Python programming language.
- To understand a range of Object-Oriented Programming, as well as in-depth data and information processing techniques.
- To understand the high-performance programs designed to strengthen the practical expertise.

Course Outcome

- Student should be able to understand the basic concepts scripting and the contributions of scripting language
- Ability to explore python especially the object – oriented concepts, and the built in objects of Python.
- Ability to create practical and contemporary applications such as TCP/IP network programming, Web applications, discrete event simulations

List of Experiments:

1. Write a program to demonstrate different number datatypes in Python.
2. Write a program to perform different Arithmetic Operations on numbers in Python.
3. Write a program to create, concatenate and print a string and accessing sub-string from a given string.
4. Write a python script to print the current date in the following format “Sun May 29 02:26:23IST2017”
5. Write a program to create, append, and remove lists in python.
6. Write a program to demonstrate working with tuples in python.
7. Write a program to demonstrate working with dictionaries in python.
8. Write a python program to find largest of three numbers.
9. Write a Python program to convert temperatures to and from Celsius, Fahrenheit. [Formula : $c/5=f-32/9$]

10. Write a Python program to construct the following pattern, using a nested for loop

*

**

**

*

11. Write a Python script that prints prime numbers less than 20.

12. Write a python program to find factorial of a number using Recursion.

13. Write a program that accepts the lengths of three sides of a triangle as inputs. The program output should indicate whether or not the triangle is a right triangle (Recall from the Pythagorean Theorem that in a right triangle, the square of one side equals the sum of the squares of the other two sides).

14. Write a python program to define a module to find Fibonacci Numbers and import the module to another program.

15. Write a python program to define a module and import a specific function in that module to another program.

16. Write a script named copy file.py. This script should prompt the user for the names of two text files. The contents of the first file should be input and written to the second file.

17. Write a program that inputs a text file. The program should print all of the unique words in the file in alphabetical order.

18. Write a Python class to convert an integer to a Roman numeral.

19. Write a Python class to implement pow(x,n)

20. Write a Python class to reverse a string word by word.

MC2002*:GENDER SENSITIZATION LAB

(An Activity-based Course)

| II-I:CSE(AI&ML) | | | | | | | | |
|---------------------------------|-------------------------|-----------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| MC2002* | Core | L | T | P | C | CIE | SEE | Total |
| | | 0 | 0 | 2 | 0 | 30 | 70 | 100 |
| Contact Classes:NIL | Tutorial classes:NIL | Practical classes: 36 | | | | Total Classes:36 | | |
| Prerequisites: No Prerequisites | | | | | | | | |

COURSE DESCRIPTION

This course offers an introduction to Gender Studies, an interdisciplinary field that asks critical questions about the meanings of sex and gender in society. The primary goal of this course is to familiarize students with key issues, questions and debates in Gender Studies, both historical and contemporary. It draws on multiple disciplines – such as literature, history, economics, psychology, sociology, philosophy, political science, anthropology and media studies—to examine cultural assumptions about sex, gender, and sexuality.

This course integrates analysis of current events through student presentations, aiming to increase awareness of contemporary and historical experiences of women, and of the multiple ways that sex and gender interact with race, class, caste, nationality and other social identities. This course also seeks to build an understanding and initiate and strengthen programmes combating gender-based violence and discrimination. The course also features several exercises and reflective activities designed to examine the concepts of gender, gender-based violence, sexuality, and rights. It will further explore the impact of gender-based violence on education, health and development.

Objectives of the Course:

- To develop students' sensibility with regard to issues of gender in contemporary India.
- To provide a critical perspective on the socialization of men and women.
- To introduce students to information about some key biological aspects of genders.
- To expose the students to debates on the politics and economics of work.
- To help students reflect critically on gender violence.
- To expose students to more egalitarian interactions between men and women.

Learning Outcomes:

- Students will have developed a better understanding of important issues related to gender in contemporary India.

- Students will be sensitized to basic dimensions of the biological, sociological, psychological and legal aspects of gender. This will be achieved through discussion of materials derived from research, facts, every day life, literature and film.
- Students will attain a finer grasp of how gender discrimination works in our society and how to counter it.
- Students will acquire insight into the gendered division of labour and its relation to politics and economics.
- Men and women students and professionals will be better equipped to work and live together as equals.
- Students will develop a sense of appreciation of women in all walks of life.
- Through providing accounts of studies and movements as well as the new laws that provide protection and relief to women, the textbook will empower students to understand and respond to gender violence.

UNIT-I: UNDERSTANDING GENDER

Introduction: Definition of Gender – Basic Gender Concept and Terminology – Exploring Attitudes towards Gender- Construction of Gender-Socialization: Making Women, Making Men- Preparing for Womanhood. Growing up Male. First lessons in Caste.

UNIT-II: GENDER ROLES AND RELATIONS

Two or Many?- Struggles with Discrimination- Gender Roles and Relations-Types of Gender Roles- Gender Roles and Relationships Matrix- Missing Women- Sex Selection and Its Consequences- Declining Sex Ratio. Demographic Consequences- Gender Spectrum : Beyond the Binary

UNIT-III: GENDER AND LABOUR

Division and Valuation of Labour- House work: The Invisible Labor- “My Mother doesn’t Work.” “Share the Load.”- Work: Its Politics and Economics-Fact and Fiction. Unrecognized and Unaccounted work.

-Gender Development Issues- Gender, Governance and Sustainable Development- Gender and Human Rights- Gender and Mainstreaming

UNIT-IV: GENDER- BASED VIOLENCE

The Concept of Violence- Types of Gender-based Violence-Gender-based Violence from a Human Rights Perspective-Sexual Harassment: Say No! -Sexual Harassment, not Eve-teasing- Coping with Everyday Harassment- Further Reading: “*Chupulu*”.

Domestic Violence: Speaking Out Is Home a Safe Place? -When Women Unite [Film]. Rebuilding Lives. Thinking about Sexual Violence Blaming the Victim-“I Fought for my Life....”

UNIT-V: GENDER AND CULTURE

Gender and Film- Gender and Electronic Media- Gender and Advertisement-Gender and Popular Literature- Gender Development Issues- Gender Issues- Gender Sensitive Language- Gender and Popular Literature –Just Relationships: Being Together as Equals Mary Kom and Onler. Love and Acid just do not Mix. Love Letters. Mothers and Fathers. Rosa Parks-TheBrave Heart.

Note: **Since it is Interdisciplinary Course, Resource Persons can be drawn from the fields of English Literature or Sociology or Political Science or any other qualified faculty who has expertise in this field from engineering departments.**

- ***Classes will consist of a combination of activities: dialogue – based lectures, discussions, collaborative learning activities, group work and in-class assignments. Apart from the above prescribed book, Teachers can make use of any authentic materials related to the topics given in the syllabus on “Gender”.***

□ **ESSENTIAL READING:** The Textbook, “*Towards a World of Equals: A Bilingual Textbook on Gender*” written by A. Suneetha, Uma Bhrugubanda, DuggiralaVasanta, Rama Melkote, Vasudha Nagaraj,Asma Rasheed, Gogu Shyamala, Deepa Sreenivas and Susie Tharu **published by Telugu Akademi, Telangana Government in 2015.**

ASSESSMENT AND GRADING:

- Discussion & Classroom Participation: 20%
- Project/ Assignment: 30%
- End Term Exam: 50%

AM2201PC: FORMAL LANGUAGES AND AUTOMATA THEORY

| II-II:CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Week | | | Credits | Max Marks | | |
| AM2201PC | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: None | | | | | | | | |

Course Objectives:

- To provide introduction to some of the central ideas of theoretical computer science from the perspective of formal languages.
- To introduce the fundamental concepts of formal languages, grammars and automata theory.
- Classify machines by their power to recognize languages.
- Employ finite state machines to solve problems in computing.
- To understand deterministic and non- deterministic machines.
- To understand the differences between decidability and undecidability.

Course Outcomes:

- Able to understand the concept of abstract machines and their power to recognize the languages.
- Able to employ finite state machines for modeling and solving computing problems.
- Able to design context free grammars for formal languages.
- Able to distinguish between decidability and undecidability.
- Able to gain proficiency with mathematical tools and formal methods.

UNIT-I Introduction to Finite Automata: Structural Representations, Automata and Complexity, the Central Concepts of Automata Theory– Alphabets, Strings, Languages, Problems.

Non deterministic Finite Automata: Formal Definition, an application, Text Search, Finite Automata with Epsilon- Transitions.

Deterministic Finite Automata: Definition of DFA, How A DFA Process Strings, The language of DFA, Conversion of NFA with ϵ -transitions to NFA without ϵ -transitions. Conversion of NFA to DFA, Moore and Melay machines.

UNIT-II

Regular Expressions: Finite Automata and Regular Expressions, Applications of Regular Expressions, Algebraic Laws for Regular Expressions, Conversion of Finite Automata to Regular Expressions.

Pumping Lemma for Regular Languages, Statement of the pumping lemma, Applications of the Pumping Lemma.

Closure Properties of Regular Languages: Closure properties of Regular languages, Decision Properties of Regular Languages, Equivalence and Minimization of Automata.

UNIT-III

Context- Free Grammars: Definition of Context- Free Grammars, Derivations Using a Grammar, Leftmost and Rightmost Derivations, the Language of a Grammar, Sentential Forms, Parse Trees, Applications of Context-Free Grammars, Ambiguity in Grammars and Languages.

Push Down Automata: Definition of the Push down Automaton, the Languages of a PDA, Equivalence of PDA's and CFG's, Acceptance by final state, Acceptance by empty stack, Deterministic Push down Automata. From CFG to PDA, From PDA to CFG.

UNIT-IV

Normal Forms for Context- Free Grammars: Eliminating useless symbols, Eliminating ϵ -Productions. Chomsky Normal form Greibach Normal form.

Pumping Lemma for Context-Free Languages: Statement of pumping lemma, Applications

Closure Properties of Context-Free Languages: Closure properties of CFL's, Decision Properties of CFL's

Turing Machines: Introduction to Turing Machine, Formal Description, Instantaneous description, The language of a Turing machine.

UNIT-V

Types of Turing machine: Turing machines and halting

Undecidability: Undecidability, A Language that is Not Recursively Enumerable, An Undecidable Problem That is RE, Undecidable Problems about Turing Machines, Recursive languages, Properties of recursive languages, Post's Correspondence Problem, Modified Post Correspondence problem, Other Undecidable Problems, Counter machines.

TEXT BOOKS:

1. Introduction to Automata Theory, Languages, and Computation, 3rd Edition, John E. Hopcroft, Rajeev Motwani, Jeffrey D. Ullman, Pearson Education.
2. Theory of Computer Science–Automata languages and computation, Mishra and Chandra shekaran, 2nd edition, PHI.

REFERENCE BOOKS:

1. Introduction to Languages and The Theory of Computation, John C Martin, TMH.
2. Introduction to Computer Theory, Daniel I.A. Cohen, John Wiley.
3. A Textbook on Automata Theory, P.K. Srimani, Nasir S.F.B, Cambridge University Press.
4. Introduction to the Theory of Computation, Michael Sipser, 3rd edition, Cengage Learning.
5. Introduction to Formal languages Automata Theory and Computation Kamala Krithivasan, RamaR, Pearson.

AM2202PC: SOFTWARE ENGINEERING

| II-II:CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM2202PC | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: None | | | | | | | | |

Course Objectives

- The aim of the course is to provide an understanding of the working knowledge of the techniques for estimation, design, testing and quality management of large software development projects.
- Topics include process models, software requirements, software design, software testing, software process/ product metrics, risk management, quality management and UML diagrams

Course Outcomes

- Ability to translate end-user requirements into system and software requirements, using e.g.UML, and structure the requirements in a Software Requirements Document (SRD).
- Identify and apply appropriate software architectures and patterns to carry out high level design of a system and be able to critically compare alternative choices.
- Will have experience and/ or awareness of testing problems and will be able to develop a simple testing report.

UNIT- I

Introduction to Software Engineering: The evolving role of software, changing nature of software, software myths.

A Generic view of process: Software engineering- a layered technology, a process framework, the capability maturity model integration (CMMI), process patterns, process assessment, personal and team process models.

Process models: The waterfall model, incremental process models, evolutionary process models, the unified process.

UNIT- II

Software Requirements: Functional and non- functional requirements, user requirements, system requirements, interface specification, the software requirements document.

Requirements engineering process: Feasibility studies, requirements elicitation and analysis, requirements validation, requirements management.

System models: Context models, behavioral models, data models, object models, structured methods.

UNIT- III

Design Engineering: Design process and design quality, design concepts, the design model. **Creating an architectural design:** software architecture, data design, architectural styles and patterns, architectural design, conceptual model of UML, basic structural modeling, class diagrams, sequence diagrams, collaboration diagrams, usecase diagrams, component diagrams.

UNIT- IV

Testing Strategies: A strategic approach to software testing, test strategies for conventional software, black- box and white-box testing, validation testing, system testing, the art of debugging.

Product metrics: Software quality, metrics for analysis model, metrics for design model, metrics for source code, metrics for testing, metrics for maintenance.

UNIT-V

Metrics for Process and Products: Software measurement, metrics for software quality.

Risk management: Reactive Vs proactive risk strategies, software risks, risk identification, risk projection, risk refinement, RMMM, RMMM plan.

Quality Management: Quality concepts, software quality assurance, software reviews, formal technical reviews, statistical software quality assurance, software reliability, the ISO 9000 quality standards.

TEXT BOOKS:

1. Software Engineering, A practitioner's Approach-Roger S.Pressman, 6th edition, McGraw Hill International Edition.
2. Software Engineering- Sommerville, 7th edition, Pearson Education.
3. The unified modeling language user guide GradyBooch, James Rambaugh, Ivar Jacobson, and Pearson Education.

REFERENCE BOOKS:

1. Software Engineering, an Engineering approach- James F. Peters, Witold Pedrycz, John Wiley.
2. Software Engineering principles and practice- Waman S. Jawadekar, The McGraw-Hill Companies.
3. Fundamentals of object-oriented design using UML Meierpage-Jones: Pearson Education.

AM2203PC: OPERATING SYSTEMS

| II-II:CSE(AI&ML) | | | | | | | | |
|---|------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM2201PC | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: A course on“Computer Programming and Data Structures”. A course on “Computer Organization and Architecture”. | | | | | | | | |

Course Objectives:

- Introduce operating system concepts (i.e., processes, threads, scheduling, synchronization, deadlocks, memory management, file and I/O sub systems and protection)
- Introduce the issues to be considered in the design and development of operating system
- Introduce basic Unix commands, system call interface for process management, inter process communication and I/O in Unix

Course Outcomes:

- Will be able to control access to a computer and the files that may be shared
- Demonstrate the knowledge of the components of computer and their respective roles in computing.
- Ability to recognize and resolve user problems with standard operating environments.
- Gain practical knowledge of how programming languages, operating systems, and architectures interact and how to use each effectively.

UNIT- I

Operating System- Introduction, Structures- Simple Batch, Multi programmed, Time- shared, Personal Computer, Parallel, Distributed Systems, Real-Time Systems, System components, Operating System services, System Calls.

UNIT-II

Process and CPU Scheduling- Process concepts and scheduling, Operations on processes, Cooperating Processes, Threads, and Interposes Communication, Scheduling Criteria, Scheduling Algorithms, Multiple –Processor Scheduling.

System call interface for process management- fork, exit, wait, wait pid, exec

UNIT- III

Dead locks- System Model, Deadlocks Characterization, Methods for Handling Deadlocks, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, and Recovery from Deadlock

Process Management and Synchronization-The Critical Section Problem, Synchronization Hardware, Semaphores, and Classical Problems of Synchronization, Critical Regions, Monitors
Inter process Communication Mechanisms: IPC between processes on a single computer system, IPC between processes on different systems, using pipes, FIFOs, message queues, shared memory.

UNIT- IV

Memory Management and Virtual Memory - Logical versus Physical Address Space, Swapping, Contiguous Allocation, Paging, Segmentation, Segmentation with Paging, Demand Paging, Page Replacement, Page Replacement Algorithms.

UNIT- V

File System Interface and Operations- Access methods, Directory Structure, Protection, File System Structure, Allocation methods, Free-space Management. Usage of open, create, read, write, close, lseek, stat, ioctl system calls.

TEXT BOOKS:

1. Operating System Principles-Abraham Silberchatz, Peter B.Galvin, GregGagne 7thEdition, JohnWiley
2. Advanced programming in the UNIX environment, W.R.Stevens, Pearson education.

REFERENCE BOOKS:

1. Operating Systems– Internals and Design Principles Stallings, Fifth Edition– 2005, Pearson Education/ PHI
2. Operating System A Design Approach- Crowley, TMH.
3. Modern Operating Systems, Andrew S.Tanenbaum 2ndedition, Pearson/PHI
4. UNIX programming environment, KernighanandPike, PHI/PearsonEducation
5. UNIX Internals- The NewFrontiers, U.Vahalia, Pearson Education.

AM2204PC: DATABASE MANAGEMENT SYSTEMS

| II-II: CSE(AI&ML) | | | | | | | | |
|---|------------------------|-------------------------|---|---|------------------|-----------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM2204PC | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 1 | 0 | 4 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | Total Classes:60 | | | |
| Prerequisites: A course on database management system | | | | | | | | |

Course Objectives

- To understand the basic concepts and the applications of database systems.
- To master the basics of SQL and construct queries using SQL.
- Topics include data models, database design, relational model, relational algebra, transaction control, concurrency control, storage structures and access techniques.

Course Outcomes:

- Gain knowledge of fundamentals of DBMS, database design and normal forms
- Master the basics of SQL for retrieval and management of data.
- Be acquainted with the basics of transaction processing and concurrency control.
- Familiarity with database storage structures and access techniques

UNIT- I

Database System Applications: A Historical Perspective, File Systems versus a DBMS, the Data Model, Levels of Abstraction in a DBMS, Data Independence, Structure of a DBMS

Introduction to Database Design: Database Design and ER Diagrams, Entities, Attributes, and Entity Sets, Relationships and Relationship Sets, Additional Features of the ER Model, Conceptual Design With the ER Model.

UNIT- II

Introduction to the Relational Model: Integrity constraint over relations, enforcing integrity constraints, querying relational data, logical database design, introduction to views, destroying/ altering tables and views.

Relational Algebra, Tuple relational Calculus, Domain relational calculus.

UNIT- III

SQL: QUERIES, CONSTRAINTS, TRIGGERS: form of basic SQL query, UNION, INTERSECT, and EXCEPT, Nested Queries, aggregation operators, NULL values, complex integrity constraints in SQL, triggers and active databases.

Schema Refinement: Problems caused by redundancy, decompositions, problems related to decomposition, reasoning about functional dependencies, FIRST, SECOND, THIRD normal forms, BCNF, lossless join decomposition, multi-valued dependencies, FOURTH normal form, FIFTH normal form.

UNIT- IV

Transaction Concept, Transaction State, Implementation of Atomicity and Durability, Concurrent Executions, Serializability, Recoverability, Implementation of Isolation, Testing for serializability, Lock Based Protocols, Timestamp Based Protocols, Validation- Based Protocols, Multiple Granularity, Recovery and Atomicity, Log-Based Recovery, Recovery with Concurrent Transactions.

UNIT- V

Data on External Storage, File Organization and Indexing, Cluster Indexes, Primary and Secondary Indexes, Index data Structures, Hash Based Indexing, Tree base Indexing, Comparison of File Organizations, Indexes and Performance Tuning, Intuitions for tree Indexes, Indexed Sequential Access Methods (ISAM), B+ Trees: A Dynamic Index Structure.

TEXT BOOKS:

1. Database Management Systems, Raghu rama Krishnan, Johannes Gehrke, *Tata McGrawHill* 3rd Edition
2. Database System Concepts, Silberschatz, Korth, *McGrawhill*, V edition.

REFERENCE BOOKS:

1. Database Systems design, Implementation, and Management, Peter Rob & Carlos Coronel 7th Edition.
2. Fundamentals of Database Systems, Elmasri Navrate, *Pearson Education*
3. Introduction to Database Systems, C.J. Date, *Pearson Education*
4. Oracle for Professionals, The XTeam, S. Shah and V. Shah, *SPD*.
5. Database Systems Using Oracle: A Simplified guide to SQL and PL/SQL, Shah, *PHI*.
6. Fundamentals of Database Management Systems, M.L. Gillenson, *Wiley Student Edition*.

AM2205PC: OBJECT ORIENTED PROGRAMMING USING JAVA

| II-II:CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM2205PC | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 1 | 0 | 4 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: | | | | | | | | |

Course Objectives:

- To introduce the object-oriented programming concepts.
- To understand object-oriented programming concepts, and apply them in solving problems.
- To introduce the principles of inheritance and polymorphism; and demonstrate how they relate to the design of abstract classes
- To introduce the implementation of packages and interfaces
- To introduce the concepts of exception handling and multi threading.
- To introduce the design of Graphical User Interface using applets and swing controls.

Course Outcomes:

- Able to solve real world problems using OOP techniques.
- Able to understand the use of abstract classes.
- Able to solve problems using java collection framework and I/o classes.
- Able to develop multi threaded applications with synchronization.
- Able to develop applets for web applications.
- Able to design GUI based applications

UNIT- I

Object- Oriented Thinking- A way of viewing world – Agents and Communities, messages and methods, Responsibilities, Classes and Instances, Class Hierarchies- Inheritance, Method binding, Overriding and Exceptions, Summary of Object-Oriented concepts. Java buzzwords, An Overview of Java, Datatypes, Variables and Arrays, operators, expressions, control statements, Introducing classes, Methods and Classes, String handling.

Inheritance–Inheritance concept, Inheritance basics, Member access, Constructors, Creating Multilevel hierarchy, super uses, using final with inheritance, Polymorphism-ad hoc polymorphism, pure polymorphism, method overriding, abstract classes, Object class, forms of inheritance- specialization, specification, construction, extension, limitation, combination, benefits of inheritance, costs of inheritance.

UNIT- II

Packages-Defining a Package, CLASS PATH, Access protection,importing packages.

Interfaces- defining an interface, implementing interfaces, Nested interfaces, applying interfaces,variables in interfaces and extending interfaces.

Stream based I/O (java.io)- The Stream classes-Byte streams and Character streams, Reading console Input and Writing Console Output, File class, Reading and writing Files, Random access file operations, The Console class, Serialization, Enumerations, autoboxing, generics.

UNIT-III

Exception handling-Fundamentals of exception handling, Exception types, Termination or resumptive models, Uncaught exceptions, using try and catch, multiple catch clauses, nested try statements, throw, throws and finally, built-in exceptions, creating own exception subclasses.

Multi threading- Differences between thread- based multi tasking and process-based multi tasking, Java thread model, creating threads, thread priorities, synchronizing threads, interthread communication.

UNIT- IV

The Collections Framework (java.util)- Collections overview, Collection Interfaces, The Collectionclasses-ArrayList, LinkedList, HashSet, TreeSet, PriorityQueue, ArrayDeque. Accessing a Collection via an Iterator, Using an Iterator, The For-Each alternative, Map Interfaces and Classes, Comparators, Collection algorithms, Arrays, The Legacy Classes and Interfaces-Dictionary,Hashtable,Properties,Stack,Vector More Utility classes, String Tokenizer, BitSet, Date, Calendar, Random, Formatter, Scanner

UNIT-V

GUI Programming with Swing – Introduction, limitations of AWT, MVC architecture, components, containers. Understanding Layout Managers, Flow Layout, Border Layout, Grid Layout, Card Layout, Grid Bag Layout.

Event Handling- The Delegation event model-Events, Event sources, Event Listeners, Eventclasses, Handling mouse and keyboard events, Adapter classes, Inner classes, Anonymous Innerclasses.

A Simple Swing Application, Applets-Applets and HTML, Security Issues, Applets and Applications, passing parameters to applets. Creating a Swing Applet, Painting in Swing, A Paint example, Exploring Swing Controls- JLabel and Image Icon, JTextField,

The Swing Buttons- JButton, JToggle Button, JCheck Box, JRadio Button, JTabbed Pane, JScroll Pane, JList, JComboBox, Swing Menus, Dialogs.

TEXT BOOKS:

AM2206PC: OPERATING SYSTEMS LAB (UsingUNIX/LINUX)

| II-II:CSE(AI&ML) | | | | | | | | |
|--|-------------------------|-----------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM2107PC | Core | L | T | P | C | CIE | SEE | Total |
| | | 0 | 0 | 3 | 1.5 | 30 | 70 | 100 |
| Contact Classes:NIL | Tutorial classes:NIL | Practical classes: 36 | | | | Total Classes:36 | | |
| Prerequisites: A course on “Programming for Problem Solving”. A course on“Computer Organization and Architecture”. | | | | | | | | |

Co-requisite:

- A course on “Operating Systems”.

Course Objectives:

- To provide an understanding of the design aspects of operating system concepts through simulation
- Introduce basic Unix commands, system call interface for process management, inter process communication and I/O in Unix

Course Outcomes:

- Simulate and implement operating system concepts such as scheduling, deadlock management, file management and memory management.
- Able to implement C programs using Unix system calls

List of Experiments:

1. Write C programs to simulate the following CPU Scheduling algorithms
a) FCFS b)SJF c)Round Robin d)priority
2. Write programs using the I/O system calls of UNIX/LINUX operating system (open, read, write, close, fcntl, seek, stat, opendir, readdir)
3. Write a C program to simulate Bankers Algorithm for Deadlock Avoidance and Prevention.
4. Write a C program to implement the Producer- Consumer problem using semaphores using UNIX/LINUX system calls.
5. Write C programs to illustrate the following IPC mechanisms
a) Pipes b)FIFOs c)Message Queues d)Shared Memory
6. Write C programs to simulate the following memory management techniques
a) Paging b)Segmentation

TEXT BOOKS:

1. Operating System Principles-Abraham Silberchatz, Peter B.Galvin, GregGagne 7thEdition, JohnWiley.
2. Advanced programming in the Unix environment, W.R.Stevens, *Pearson* education.

REFERENCE BOOKS:

1. Operating Systems– Internals and Design Principles, William Stallings, Fifth Edition –2005, Pearson Education/PHI.
2. Operating System- A Design Approach- Crowley, TMH.
3. Modern Operating Systems, Andrew STanenbaum, 2ndedition, Pearson/PHI.
4. UNIX Programming Environment, KernighanandPike, PHI/Pearson Education.
5. UNIX Internals: The New Frontiers, U.Vahalia, Pearson Education.

AM2207PC: DATABASE MANAGEMENT SYSTEMS LAB

| II-II: CSE(AI&ML) | | | | | | | | |
|------------------------|-------------------------|-----------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM2207PC | Core | L | T | P | C | CIE | SEE | Total |
| | | 0 | 0 | 3 | 1.5 | 30 | 70 | 100 |
| Contact Classes:NIL | Tutorial classes:NIL | Practical classes: 36 | | | | Total Classes:36 | | |
| Prerequisites: | | | | | | | | |

Co- requisites:

- Database Management Systems.

Course Objectives

- Introduce ER datamodel, database design and normalization
- Learn SQL basics for data definition and data manipulation

Course Outcomes

- Design database schema for a given application and apply normalization
- Acquire skills in using SQL commands for data definition and data manipulation.
- Develop solutions for database applications using procedures, cursors and triggers

List of Experiments

1. Concept design with E-RModel
2. Relational Model
3. Normalization
4. Practicing DDL commands
5. Practicing DML commands
6. Querying (using ANY, ALL, IN, Exists, NOTEXISTS, UNION, INTERSECT, Constraints etc.)
7. Queries using Aggregate functions, GROUPBY, HAVING and Creation and dropping of Views.
8. Triggers (Creation of insert trigger, delete trigger, update trigger)
9. Procedures
10. Usage of Cursors

TEXT BOOKS:

1. Database Management Systems, Raghurama Krishnan, Johannes Gehrke, Tata Mc GrawHill, 3rd Edition
2. Database System Concepts, Silberschatz, Korth, McGrawHill, Vedition.

REFERENCES BOOKS:

AM2208PC: JAVA PROGRAMMING LAB

| II-II: CSE(AI&ML) | | | | | | | | |
|---------------------|----------------------|-----------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM2208PC | Core | L | T | P | C | CIE | SEE | Total |
| | | 0 | 0 | 2 | 1 | 30 | 70 | 100 |
| Contact Classes:NIL | Tutorial classes:NIL | Practical classes: 36 | | | | Total Classes:36 | | |
| Prerequisites: | | | | | | | | |

Course Objectives:

- To write programs using abstract classes.
- To write programs for solving real world problems using java collection frame work.
- To write multi threaded programs.
- To write GUI programs using swing controls in Java.
- To introduce java compiler and eclipse platform.
- To impart hands on experience with java programming.

Course Outcomes:

- Able to write programs for solving realworld problems using java collection framework.
- Able to write programs using abstract classes.
- Able to write multithreaded programs.
- Able to write GUI programs using swing controls in Java.

Note:

- Use LINUX and MySQL for the Lab Experiments. Though not mandatory, encourage the use of Eclipse platform.
- The list suggests the minimum program set. Hence, the concerned staff is requested to add more problems to the list as needed.

List of Experiments:

1. Use Eclipse or Net bean platform and acquaint with the various menus. Create a test project, add a test class, and run it. See how you can use auto suggestions, auto fill. Try code formatter and code refactoring like renaming variables, methods, and classes. Try debug step by step with a small program of about 10 to 15 lines which contains at least one if else condition and a for loop.
2. Write a Java program that works as a simple calculator. Use a grid layout to arrange buttons for the digits and for the +, -, *, % operations. Add a text field to display the result. Handle any possible exceptions like divided by zero

3. a) Develop an applet in Java that displays a simple message.
b) Develop an apple tin Java that receives an integer in one textfield, and computes its factorial Value and returns it in another textfield, when the button named "Compute" is clicked.
4. Write a Java program that creates a user interface to perform integer divisions. The user enters two numbers in the text fields, Num1 and Num2. The division of Num1 and Num 2 is displayed in the Result field when the Divide button is clicked. If Num1 or Num2 were not an integer, the program would throw a Number Format Exception. If Num2 were Zero, the program would throw anArithmetic Exception. Display the exception in a message dialog box.
5. Write a Java program that implements a multi-thread application that has three threads. First thread generates random integer every 1 second and if the value is even, second thread computes the square of the number and prints. If the value is odd, the third thread will print the value of cube of the number.
6. Write a Java program for the following: Create a doubly linked list of elements Delete a given element from the above list.

Display the contents of the list after deletion.

7. Write a Java program that simulates a traffic light. The program lets the user select one of three lights: red, yellow,or green with radio buttons. On selecting a button, an appropriate message with "Stop" or "Ready" or "Go" should appear above the buttons in selected color. Initially, there is no message shown.
8. Write a Java program to create an abstract class named Shape that contains two integers and an empty method named print Area(). Provide three classes named Rectangle, Triangle, and Circle such that each one of the classes extends the class Shape. Each one of the classes contains only the method printArea () that prints the area of the given shape.
9. Suppose that a table named Table.txt is stored in a text file. The first line in the file is the header,and the remaining lines correspond to rows in the table. The elements are separated by commas.Write a java program to display the table using Labels in Grid Layout.
10. Write a Java program that handles all mouse events and shows the event name at the center of the window when a mouse event is fired (Use Adapter classes).

11. Write a Java program that loads names and phone numbers from a text file where the data is organized as one line per record and each field in a record are separated by a tab (\t). It takes a name or phone number as input and prints the corresponding other value from the hash table (hint:use hash tables)
12. Write a Java program that correctly implements the producer – consumer problem using the concept of inter thread communication.
13. Write a Java program to listall the files in a directory including the files present in all its subdirectories.
14. Write a Java program that implements Quick sort algorithm for sorting a list of names in ascending order
15. Write a Java program that implements Bubble sort algorithm for sorting in descending order and also shows the number of inter changes occurred for the given set off integers.

MC2001*: CONSTITUTION OF INDIA

| II-II:CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| MC2001* | Mandatory | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 0 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nil | | | | Total Classes:60 | | |
| Prerequisites: None | | | | | | | | |

The Constitution of India is the supreme law of India. Parliament of India can not make any law which violates the Fundamental Rights enumerated under the Part III of the Constitution. The Parliament of India has been empowered to amend the Constitution under Article 368, however, it cannot use this power to change the “basic structure” of the constitution, which has been ruled and explained by the Supreme Court of India in its historical judgments. The Constitution of India reflects the idea of “Constitutionalism” – a modern and progressive concept historically developed by the thinkers of “liberalism” – an ideology which has been recognized as one of the most popular political ideology and result of historical struggles against arbitrary use of sovereign power by state. The historic revolutions in France, England, America and particularly European Renaissance and Reformation movement have resulted into progressive legal reforms in the form of “constitutionalism” in many countries. The Constitution of India was made by borrowing models and principles from many countries including United Kingdom and America.

The Constitution of India is not only a legal document but it also reflects social, political and economic perspectives of the Indian Society. It reflects India's legacy of “diversity”. It has been said that Indian constitution reflects ideals of its freedom movement; however, few critics have argued that it does not truly incorporate our own ancient legal heritage and cultural values. No law can be “static” and therefore the Constitution of India has also been amended more than one hundred times. These amendments reflect political, social and economic developments since the year 1950. The Indian judiciary and particularly the Supreme Court of India has played an historic role as the guardian of people. It has been protecting not only basic ideals of the Constitution but also strengthened the same through progressive interpretations of the text of the Constitution. The judicial activism of the Supreme Court of India and its historic contributions has been recognized throughout the world and it gradually made it “as one of the strongest court in the world”.

Course content

1. Meaning of the constitution law and constitutionalism
2. Historical perspective of the Constitution of India
3. Salient features and characteristics of the Constitution of India
4. Scheme of the fundamental rights
5. The scheme of the Fundamental Duties and its legal status
6. The Directive Principles of State Policy– Its importance and implementation
7. Federal structure and distribution of legislative and financial powers between the

Union and the States

8. Parliamentary Form of Government in India– The constitution powers and status of the President of India
9. Amendment of the Constitutional Powers and Procedure
10. The historical perspectives of the constitutional amendments in India
11. Emergency Provisions: National Emergency, President Rule, Financial Emergency
12. Local Self Government–Constitutional Scheme in India
13. Scheme of the Fundamental Right to Equality
14. Scheme of the Fundamental Right to certain Freedom under Article 19
15. Scope of the Right to Life and Personal Liberty under Article 21

AM3101PC: R PROGRAMMING

| III-I: CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM3101PC | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: None | | | | | | | | |

Course Objectives:

- Understanding and being able to use basic programming concepts
- Automate data analysis
- Working collaboratively and openly on code
- Knowing how to generate dynamic documents
- Being able to use a continuous test-driven development approach

Course Outcomes:

- be able to use and program in the programming language R
- be able to use R to solve statistical problems
- be able to implement and describe Monte Carlo the technology
- be able to minimize and maximize functions using R

UNIT – I

Introduction: Overview of R, R data types and objects, reading and writing data, sub setting R Objects, Essentials of the R Language, Installing R, Running R, Packages in R, Calculations, Complex numbers in R, Rounding, Arithmetic, Modulo and integer quotients, Variable names and assignment, Operators, Integers, Factors, Logical operations

UNIT – II

Control structures, functions, scoping rules, dates and times, Introduction to Functions, preview of Some Important R Data Structures, Vectors, Character Strings, Matrices, Lists, Data Frames, Classes

Vectors: Generating sequences, Vectors and subscripts, Extracting elements of a vector using subscripts, Working with logical subscripts, Scalars, Vectors, Arrays, and Matrices, Adding and Deleting Vector Elements, Obtaining the Length of a Vector, Matrices and Arrays as Vectors Vector Arithmetic and Logical Operations, Vector Indexing, Common Vector Operations

UNIT – III

Lists: Creating Lists, General List Operations, List Indexing Adding and Deleting List Elements, Getting the Size of a List, Extended Example: Text Concordance Accessing List Components and Values Applying Functions to Lists, DATA FRAMES, Creating Data Frames, Accessing Data Frames, Other Matrix-Like Operations

UNIT - IV

FACTORS AND TABLES, Factors and Levels, Common Functions Used with Factors, Working with Tables, Matrix/Array-Like Operations on Tables , Extracting a Subtable,

Finding the Largest Cells in a Table, Math Functions, Calculating a Probability, Cumulative Sums and Products, Minima and Maxima, Calculus, Functions for Statistical Distributions

UNIT - V

OBJECT-ORIENTED PROGRAMMING: S Classes, S Generic Functions, Writing S Classes, Using Inheritance, S Classes, Writing S Classes, Implementing a Generic Function on an S Class, visualization, Simulation, code profiling, Statistical Analysis with R, data manipulation

TEXT BOOKS:

1. R Programming for Data Science by Roger D. Peng
2. The Art of R Programming by Prashanth singh, Vivek Mourya, Cengage LearningIndia.

AM3102PC: DESIGN AND ANALYSIS OF ALGORITHMS

| III-I: CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM3102PC | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Null | | | | Total Classes:60 | | |
| Prerequisites: None | | | | | | | | |

Course Objectives:

- Introduces the notations for analysis of the performance of algorithms.
- Introduces the data structure disjoint sets.
- Describes major algorithmic techniques (divide-and-conquer, backtracking, dynamic programming, greedy, branch and bound methods) and mention problems for which each technique is appropriate;
- Describes how to evaluate and compare different algorithms using worst-, average-, and best-case analysis.
- Explains the difference between tractable and intractable problems, and introduces the problems that are P, NP and NP complete.

Course Outcomes:

- Ability to analyze the performance of algorithms
- Ability to choose appropriate data structures and algorithm design methods for a specified application
- Ability to understand how the choice of data structures and the algorithm design methods impact the performance of programs

UNIT - I

Introduction: Algorithm, Performance Analysis-Space complexity, Time complexity, Asymptotic Notations- Big oh notation, Omega notation, Theta notation and Little oh notation.

Divide and conquer: General method, applications-Binary search, Quick sort, Merge sort, Strassen's matrix multiplication.

UNIT - II

Disjoint Sets: Disjoint set operations, union and find algorithms

Backtracking: General method, applications, n-queen's problem, sum of subsets problem, graph coloring.

UNIT - III

Dynamic Programming: General method, applications- Optimal binary search trees, 0/1 knapsack problem, All pairs shortest path problem, Traveling sales person problem, Reliability design.

UNIT - IV

Greedy method: General method, applications-Job sequencing with deadlines, knapsack problem, Minimum cost spanning trees, Single source shortest path problem.

UNIT - V

Branch and Bound: General method, applications - Travelling sales person problem, 0/1 knapsack problem - LC Branch and Bound solution, FIFO Branch and Bound solution.

NP-Hard and NP-Complete problems: Basic concepts, non deterministic algorithms, NP - Hard and NP-Complete classes, Cook's theorem.

TEXT BOOK:

1. Fundamentals of Computer Algorithms, Ellis Horowitz, Satraj Sahni and Rajasekharan, University Press.

REFERENCE BOOKS:

1. Design and Analysis of algorithms, Aho, Ullman and Hopcroft, Pearson education.
2. Introduction to Algorithms, second edition, T. H. Cormen, C.E. Leiserson, R. L. Rivest, and C. Stein, PHI Pvt. Ltd./ Pearson Education.
3. Algorithm Design: Foundations, Analysis and Internet Examples, M.T. Goodrich and R. Tamassia, John Wiley and sons.

AM3103PC: ARTIFICIAL INTELLIGENCE

| III-I: CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM3103PC | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Null | | | | Total Classes:60 | | |
| Prerequisites: None | | | | | | | | |

Course Objectives:

- To learn the difference between optimal reasoning vs human like reasoning
- To understand the notions of state space representation, exhaustive search, heuristicsearch along with the time and space complexities
- To learn different knowledge representation techniques
- To understand the applications of AI: namely Game Playing, Theorem Proving, Expert Systems, Machine Learning and Natural Language Processing

Course Outcomes:

- Possess the ability to formulate an efficient problem space for a problem expressed in English.
- Possess the ability to select a search algorithm for a problem and characterize its time and space complexities.
- Possess the skill for representing knowledge using the appropriate technique
- Possess the ability to apply AI techniques to solve problems of Game Playing, Expert Systems, Machine Learning and Natural Language Processing

UNIT - I

Introduction, History, Intelligent Systems, Foundations of AI, Sub areas of AI, Applications. Problem Solving - State-Space Search and Control Strategies: Introduction, General Problem Solving, Characteristics of Problem, Exhaustive Searches, Heuristic Search Techniques, Iterative-Deepening A*, Constraint Satisfaction. Game Playing, Bounded Look-aheadStrategy and use of Evaluation Functions, Alpha-Beta Pruning

UNIT - II

Logic Concepts and Logic Programming: Introduction, Propositional Calculus, Propositional Logic, Natural Deduction System, Axiomatic System, Semantic Tableau System in Propositional Logic, Resolution Refutation in Propositional Logic, Predicate Logic, Logic Programming.

Knowledge Representation: Introduction, Approaches to Knowledge Representation, Knowledge Representation using Semantic Network, Extended Semantic Networks for KR, Knowledge Representation using Frames.

UNIT - III

Expert System and Applications: Introduction, Phases in Building Expert Systems, Expert System Architecture, Expert Systems Vs Traditional Systems, Truth Maintenance Systems, Application of Expert Systems, List of Shells and Tools.

Uncertainty Measure - Probability Theory: Introduction, Probability Theory, Bayesian Belief Networks, Certainty Factor Theory, Dempster-Shafer Theory.

UNIT-IV

Machine-Learning Paradigms: Introduction. Machine Learning Systems. Supervised and Unsupervised Learning. Inductive Learning. Learning Decision Trees (Text Book 2), Deductive Learning. Clustering, Support Vector Machines.

Artificial Neural Networks: Introduction, Artificial Neural Networks, Single-Layer Feed-Forward Networks, Multi-Layer Feed-Forward Networks, Radial-Basis Function Networks, Design Issues of Artificial Neural Networks, Recurrent Networks.

UNIT-V

Advanced Knowledge Representation Techniques: Case Grammars, Semantic Web

Natural Language Processing: Introduction, Sentence Analysis Phases, Grammars and Parsers, Types of Parsers, Semantic Analysis, Universal Networking Knowledge.

TEXT BOOKS:

1. Saroj Kaushik. Artificial Intelligence. Cengage Learning. 2011
2. Russell, Norvig: Artificial intelligence, A Modern Approach, Pearson Education, Second Edition. 2004

REFERENCE BOOK:

1. Rich, Knight, Nair: Artificial intelligence, Tata McGraw Hill, Third Edition 2009.
2. Introduction to Artificial Intelligence by Eugene Charniak, Pearson.
3. Introduction to Artificial Intelligence and expert systems Dan W.Patterson. PHI.
4. Artificial Intelligence by George Fluger Pearson fifth edition.

AM3104PC: NATURAL LANGUAGE PROCESSING

| III-I: CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM3104PC | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: None | | | | | | | | |

Course Objectives: Introduce to some of the problems and solutions of NLP and their relation to linguistics and statistics.

Course Outcomes:

- Show sensitivity to linguistic phenomena and an ability to model them with formal grammars.
- Understand and carry out proper experimental methodology for training and evaluating empirical NLP systems.
- Able to manipulate probabilities, construct statistical models over strings and trees, and estimate parameters using supervised and unsupervised training methods.
- Able to design, implement, and analyze NLP algorithms.
- Able to design different language modeling Techniques.

UNIT - I

Finding the Structure of Words: Words and Their Components, Issues and Challenges, Morphological Models

Finding the Structure of Documents: Introduction, Methods, Complexity of the Approaches, Performances of the Approaches

UNIT - II

Syntax Analysis: Parsing Natural Language, Treebanks: A Data-Driven Approach to Syntax, Representation of Syntactic Structure, Parsing Algorithms, Models for Ambiguity Resolution in Parsing, Multilingual Issues

UNIT - III

Semantic Parsing: Introduction, Semantic Interpretation, System Paradigms, Word Sense Systems, Software.

UNIT - IV

Predicate- Argument Structure, Meaning Representation Systems, Software.

UNIT - V

Discourse Processing: Cohension, Reference Resolution, Discourse Cohension and Structure **Language Modeling:** Introduction, N-Gram Models, Language Model Evaluation, Parameter Estimation, Language Model Adaptation, Types of Language Models, Language-Specific Modeling Problems, Multilingual and Cross lingual Language Modeling

TEXT BOOKS:

1. Multilingual natural Language Processing Applications: From Theory to Practice –Daniel M. Bikel and Imed Zitouni, Pearson Publication.
2. Natural Language Processing and Information Retrieval: Tanvier Siddiqui, U.S. Tiwary.

REFERENCE:

1. Speech and Natural Language Processing - Daniel Jurafsky & James H Martin, Pearson Publications.

AM3108PE: INFORMATION THEORY & CODING

(Professional Elective - I)

| III-I: CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM3108PE | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: None | | | | | | | | |

Course Objectives:

- To acquire the knowledge in measurement of information and errors.
- Understand the importance of various codes for communication systems
- To design encoder and decoder of various codes.
- To know the applicability of source and channel codes

Course Outcomes:

- Upon completing this course, the student will be able to
- Learn measurement of information and errors.
- Obtain knowledge in designing various source codes and channel codes
- Design encoders and decoders for block and cyclic codes
- Understand the significance of codes in various applications

UNIT - I

Coding for Reliable Digital Transmission and storage

Mathematical model of Information, A Logarithmic Measure of Information, Average and Mutual Information and Entropy, Types of Errors, Error Control Strategies.

Source Codes: Shannon-fano coding, Huffman coding

UNIT - II

Linear Block Codes: Introduction to Linear Block Codes, Syndrome and Error Detection, Minimum Distance of a Block code, Error-Detecting and Error-correcting Capabilities of a Block code, Standard array and Syndrome Decoding, Probability of an undetected error for Linear Codes over a BSC, Hamming Codes. Applications of Block codes for Error control in data storage system.

UNIT - III

Cyclic Codes: Description, Generator and Parity-check Matrices, Encoding, Syndrome Computation and Error Detection, Decoding, Cyclic Hamming Codes, shortened cyclic codes, Error-trapping decoding for cyclic codes, Majority logic decoding for cyclic codes.

UNIT - IV

Convolutional Codes: Encoding of Convolutional Codes- Structural and Distance Properties, state, tree, trellis diagrams, maximum likelihood decoding, Sequential decoding, Majority- logic decoding of Convolution codes. Application of Viterbi Decoding and Sequential Decoding, Applications of Convolutional codes in ARQ system.

UNIT - V

BCH Codes: Minimum distance and BCH bounds, Decoding procedure for BCH codes, Syndrome computation and iterative algorithms, Error locations polynomials for single and double error correction.

TEXT BOOKS

1. Error Control Coding- Fundamentals and Applications –Shu Lin, Daniel J. Costello, Jr, PrenticeHall, Inc 2014.
2. Error Correcting Coding Theory-Man Young Rhee, McGraw – Hill Publishing 1989

REFERENCE BOOKS

1. Digital Communications- John G. Proakis, 5th ed., , TMH 2008.
2. Introduction to Error Control Codes-Salvatore Gravano-oxford
3. Error Correction Coding – Mathematical Methods and Algorithms – Todd K.Moon, 2006, WileyIndia.
4. Information Theory, Coding and Cryptography – Ranjan Bose, 2nd Edition, 2009, TMH.

AM3109PE: ADVANCED COMPUTER ARCHITECTURE

(Professional Elective - I)

| III-I: CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM3109PE | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: None | | | | | | | | |

Course Objectives

- To impart the concepts and principles of parallel and advanced computer architectures.
- To develop the design techniques of Scalable and multithreaded Architectures.
- To Apply the concepts and techniques of parallel and advanced computer architectures to design modern computer systems

Course Outcomes:

Gain knowledge of

- Computational models and Computer Architectures.
- Concepts of parallel computer models.
- Scalable Architectures, Pipelining, Superscalar processors, multiprocessors

UNIT - I

Theory of Parallelism, Parallel computer models, The State of Computing, Multiprocessors and Multicomputers, Multivector and SIMD Computers, PRAM and VLSI models, Architectural development tracks, Program and network properties, Conditions of parallelism, Program partitioning and Scheduling, Program flow Mechanisms, System interconnect Architectures.

UNIT – II Principals of Scalable performance, Performance metrics and measures, Parallel Processing applications, Speed up performance laws, Scalability Analysis and Approaches, Hardware Technologies, Processes and Memory Hierarchy, Advanced Processor Technology, Superscalar and Vector Processors, Memory Hierarchy Technology, Virtual Memory Technology.

UNIT - III

Bus Cache and Shared memory, Backplane bus systems, Cache Memory organizations, Shared- Memory Organizations, Sequential and weak consistency models, Pipelining and superscalar techniques, Linear Pipeline Processors, Non-Linear Pipeline Processors, Instruction Pipeline design, Arithmetic pipeline design, superscalar pipeline design.

UNIT - IV

Parallel and Scalable Architectures, Multiprocessors and Multicomputers, Multiprocessor system interconnects, cache coherence and synchronization mechanism, Three Generations of Multicomputers, Message-passing Mechanisms, Multivector and SIMD computers, Vector Processing Principals, Multivector Multiprocessors, Compound Vector processing, SIMD computer Organizations, The connection machine CM-5,

UNIT - V

Scalable, Multithreaded and Dataflow Architectures, Latency-hiding techniques, Principals of Multithreading, Fine-Grain Multicomputers, Scalable and multithreaded Architectures, Dataflow and hybrid Architectures.

TEXT BOOK:

1. Advanced Computer Architecture Second Edition, Kai Hwang, Tata McGraw Hill Publishers.

REFERENCE BOOKS:

AM3110PE: DATA ANALYTICS

(Professional Elective - I)

| III-I: CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM3110PE | Professional Elective - I | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: None | | | | | | | | |

Course Objectives:

- To explore the fundamental concepts of data analytics.
- To learn the principles and methods of statistical analysis
- Discover interesting patterns, analyze supervised and unsupervised models and estimate the accuracy of the algorithms.
- To understand the various search methods and visualization techniques.

Course Outcomes:

After completion of this course students will be able to

- Understand the impact of data analytics for business decisions and strategy
- Carry out data analysis/statistical analysis
- To carry out standard data visualization and formal inference procedures
- Design Data Architecture
- Understand various Data Sources

UNIT - I

Data Management: Design Data Architecture and manage the data for analysis, understand various sources of Data like Sensors/Signals/GPS etc. Data Management, Data Quality (noise, outliers, missing values, duplicate data) and Data Processing & Processing.

UNIT - II

Data Analytics: Introduction to Analytics, Introduction to Tools and Environment, Application of Modeling in Business, Databases & Types of Data and variables, Data Modeling Techniques, Missing Imputation etc. Need for Business Modeling.

UNIT - III

Regression – Concepts, Blue property assumptions, Least Square Estimation, Variable Rationalization, and Model Building etc.

Logistic Regression: Model Theory, Model fit Statistics, Model Construction, Analytics applications to various Business Domains etc.

UNIT - IV

Object Segmentation: Regression Vs Segmentation – Supervised and Unsupervised Learning, Tree Building – Regression, Classification, Overfitting, Pruning and Complexity, Multiple Decision Trees etc. Time Series Methods: Arima, Measures of Forecast Accuracy, STL approach, Extract features from generated model as Height, Average Energy etc and analyze for prediction

UNIT - V

Data Visualization: Pixel-Oriented Visualization Techniques, Geometric Projection Visualization Techniques, Icon-Based Visualization Techniques, Hierarchical Visualization Techniques, Visualizing Complex Data and Relations.

TEXT BOOKS:

1. Student's Handbook for Associate Analytics – II, III.
2. Data Mining Concepts and Techniques, Han, Kamber, 3rd Edition, Morgan Kaufmann Publishers.

REFERENCE BOOKS:

1. Introduction to Data Mining, Tan, Steinbach and Kumar, Addison Wesley, 2006.
2. Data Mining Analysis and Concepts, M. Zaki and W. Meira
3. Mining of Massive Datasets, Jure Leskovec Stanford Univ. Anand Rajaraman
Milliway Labs Jeffrey D Ullman Stanford Univ.

AM3111PE: IMAGE PROCESSING

(Professional Elective - I)

| III-I: CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM3111PE | Professional | L | T | P | C | CIE | SEE | Total |
| | Elective - I | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: None | | | | | | | | |

Course Objectives

- Provide a theoretical and mathematical foundation of fundamental Digital Image Processing concepts.
- The topics include image acquisition; sampling and quantization; preprocessing; enhancement; restoration; segmentation; and compression.

Course Outcomes

- Demonstrate the knowledge of the basic concepts of two-dimensional signal acquisition, sampling, and quantization.
- Demonstrate the knowledge of filtering techniques.
- Demonstrate the knowledge of 2D transformation techniques.
- Demonstrate the knowledge of image enhancement, segmentation, restoration and compression techniques.

UNIT - I

Digital Image Fundamentals: Digital Image through Scanner, Digital Camera. Concept of Gray Levels. Gray Level to Binary Image Conversion. Sampling and Quantization. Relationship between Pixels. Imaging Geometry. 2D Transformations-DFT, DCT, KLT and SVD.

UNIT - II

Image Enhancement in Spatial Domain Point Processing, Histogram Processing, Spatial Filtering, Enhancement in Frequency Domain, Image Smoothing, Image Sharpening.

UNIT - III

Image Restoration Degradation Model, Algebraic Approach to Restoration, Inverse Filtering, Least Mean Square Filters, Constrained Least Squares Restoration, Interactive Restoration.

UNIT - IV

Image Segmentation Detection of Discontinuities, Edge Linking and Boundary Detection, Thresholding, Region Oriented Segmentation.

UNIT - V

Image Compression Redundancies and their Removal Methods, Fidelity Criteria, Image Compression Models, Source Encoder and Decoder, Error Free Compression, Lossy Compression.

TEXT BOOK:

1. Digital Image Processing: R.C. Gonzalez & R. E. Woods, Addison Wesley/ Pearson Education, 2nd Ed, 2004.

REFERENCE BOOKS:

1. Fundamentals of Digital Image Processing: A. K. Jain, PHI.
2. Digital Image Processing using MATLAB: Rafael C. Gonzalez, Richard E. Woods, Steven L. Eddins: Pearson Education India, 2004.
3. Digital Image Processing: William K. Pratt, John Wiley, 3rd Edition, 2004.

AM3112PE: PRINCIPLES OF PROGRAMMING LANGUAGES

(Professional Elective - I)

| III-I: CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Week | | | Credits | Max Marks | | |
| AM3112PE | Professional Elective - I | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: None | | | | | | | | |

Course Objectives

- Introduce important paradigms of programming languages
- To provide conceptual understanding of high-level language design and implementation
- Topics include programming paradigms; syntax and semantics; data types, expressions and statements; subprograms and blocks; abstract data types; concurrency; functional and logic programming languages; and scripting languages

Course Outcomes

- Acquire the skills for expressing syntax and semantics in formal notation
- Identify and apply a suitable programming paradigm for a given computing application
- Gain knowledge of and able to compare the features of various programming languages

UNIT - I

Preliminary Concepts: Reasons for Studying Concepts of Programming Languages, Programming Domains, Language Evaluation Criteria, Influences on Language Design, Language Categories, Language Design Trade-Offs, Implementation Methods, Programming Environments

Syntax and Semantics: General Problem of Describing Syntax and Semantics, Formal Methods of Describing Syntax, Attribute Grammars, Describing the Meanings of Programs

UNIT - II

Names, Bindings, and Scopes: Introduction, Names, Variables, Concept of Binding, Scope, Scope and Lifetime, Referencing Environments, Named Constants

Data Types: Introduction, Primitive Data Types, Character String Types, User Defined Ordinal Types, Array, Associative Arrays, Record, Union, Tuple Types, List Types, Pointer and Reference Types, TypeChecking, Strong Typing, Type Equivalence

Expressions and Statements: Arithmetic Expressions, Overloaded Operators, Type Conversions, Relational and Boolean Expressions, Short Circuit Evaluation, Assignment Statements, Mixed-Mode Assignment

Control Structures – Introduction, Selection Statements, Iterative Statements, Unconditional Branching, Guarded Commands.

UNIT - III

Subprograms and Blocks: Fundamentals of Sub-Programs, Design Issues for Subprograms, Local Referencing Environments, Parameter Passing Methods, Parameters that Are Subprograms, Calling Subprograms Indirectly, Overloaded Subprograms, Generic Subprograms, Design Issues for Functions, User Defined Overloaded Operators, Closures, Coroutines

Implementing Subprograms: General Semantics of Calls and Returns, Implementing Simple Subprograms, Implementing Subprograms with Stack-Dynamic Local Variables, Nested Subprograms, Blocks, Implementing Dynamic Scoping

Abstract Data Types: The Concept of Abstraction, Introductions to Data Abstraction, Design Issues, Language Examples, Parameterized ADT, Encapsulation Constructs, Naming Encapsulations

UNIT - IV

Concurrency: Introduction, Introduction to Subprogram Level Concurrency, Semaphores, Monitors, Message Passing, Java Threads, Concurrency in Function Languages, Statement Level Concurrency. Exception Handling and Event Handling: Introduction, Exception Handling in Ada, C++, Java, Introduction to Event Handling, Event Handling with Java and C#.

UNIT - V

Functional Programming Languages: Introduction, Mathematical Functions, Fundamentals of Functional Programming Language, LISP, Support for Functional Programming in Primarily Imperative Languages, Comparison of Functional and Imperative Languages

Logic Programming Language: Introduction, an Overview of Logic Programming, Basic Elements of Prolog, Applications of Logic Programming.

Scripting Language: Pragmatics, Key Concepts, Case Study: Python – Values and Types, Variables, Storage and Control, Bindings and Scope, Procedural Abstraction, Data Abstraction, Separate Compilation, Module Library. (Text Book 2)

TEXT BOOKS:

1. Concepts of Programming Languages Robert. W. Sebesta 10/E, Pearson Education.
2. Programming Language Design Concepts, D. A. Watt, Wiley Dreamtech, 2007.

REFERENCE BOOKS:

1. Programming Languages, 2nd Edition, A.B. Tucker, R. E. Noonan, TMH.

AM3113PE: COMPUTER GRAPHICS

(Professional Elective - II)

| III-I: CSE(AI&ML) | | | | | | | | |
|---------------------|----------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Week | | | Credits | Max Marks | | |
| AM3113PE | Professional Elective - II | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: None | | | | | | | | |

Course Objectives

- The aim of this course is to provide an introduction of fundamental concepts and theory of computer graphics.
- Topics covered include graphics systems and input devices; geometric representations and 2D/3D transformations; viewing and projections; illumination and color models; animation; rendering and implementation; visible surface detection;

Course Outcomes

- Acquire familiarity with the relevant mathematics of computer graphics.
- Be able to design basic graphics application programs, including animation
- Be able to design applications that display graphic images to given specifications

UNIT - I

Introduction: Application areas of Computer Graphics, overview of graphics systems, video-display devices, raster-scan systems, random scan systems, graphics monitors and work stations and input devices

Output primitives: Points and lines, line drawing algorithms (Bresenham's and DDA Algorithm), mid- point circle and ellipse algorithms

Polygon Filling: Scan-line algorithm, boundary-fill and flood-fill algorithms

UNIT - II

2-D geometrical transforms: Translation, scaling, rotation, reflection and shear transformations, matrix representations and homogeneous coordinates, composite transforms, transformations between coordinate systems

2-D viewing: The viewing pipeline, viewing coordinate reference frame, window to view-port coordinate transformation, viewing functions, Cohen-Sutherland algorithms, Sutherland –Hodgeman polygon clipping algorithm.

UNIT - III

3-D object representation: Polygon surfaces, quadric surfaces, spline representation, Hermite curve, Bezier curve and B-Spline curves, Bezier and B-Spline surfaces. Basic illumination models, polygon rendering methods.

UNIT - IV

3-D Geometric transformations: Translation, rotation, scaling, reflection and shear transformations, composite transformations.

viewing: Viewing pipeline, viewing coordinates, view volume and general projection transforms and clipping.

UNIT - V

Computer animation: Design of animation sequence, general computer animation functions, raster animation, computer animation languages, key frame systems, motion specifications

Visible surface detection methods: Classification, back-face detection, depth-buffer, BSP-tree methods and area sub-division methods

TEXT BOOKS:

1. "Computer Graphics *C version*", Donald Hearn and M. Pauline Baker, Pearson Education
2. "Computer Graphics Principles & practice", second edition in C, Foley, Van Dam, Feiner and Hughes, Pearson Education.
3. Computer Graphics, Steven Harrington, TMH

REFERENCE BOOKS:

1. Procedural elements for Computer Graphics, David F Rogers, Tata Mc Graw hill, 2nd edition.
2. Principles of Interactive Computer Graphics", Neuman and Sproul, TMH.
3. Principles of Computer Graphics, Shalini Govil, Pai, 2005, Springer.

AM3114PE: ADVANCED OPERATING SYSTEMS

(Professional Elective - II)

| III-I: CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM3114PE | Professional | L | T | P | C | CIE | SEE | Total |
| | Elective - II | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nil | | | | Total Classes:60 | | |
| Prerequisites: None | | | | | | | | |

Course Objectives

- To study, learn, and understand the main concepts of advanced operating systems (parallel processing systems, distributed systems, real time systems, network operating systems, and open-source operating systems)
- Hardware and software features that support these systems.

Course Outcomes

- Understand the design approaches of advanced operating systems
- Analyze the design issues of distributed operating systems.
- Evaluate design issues of multi processor operating systems.
- Identify the requirements Distributed File System and Distributed Shared Memory.
- Formulate the solutions to schedule the real time applications.

UNIT - I

Architectures of Distributed Systems: System Architecture Types, Distributed Operating Systems, Issues in Distributed Operating Systems, Communication Primitives. Theoretical Foundations: Inherent Limitations of a Distributed System, Lamport's Logical Clocks, Vector Clocks, Causal Ordering of Messages, Termination Detection.

UNIT - II

Distributed Mutual Exclusion: The Classification of Mutual Exclusion Algorithms, Non-Token – Based Algorithms: Lamport's Algorithm, The Ricart-Agrawala Algorithm, Maekawa's Algorithm, Token-Based Algorithms: Suzuki-Kasami's Broadcast Algorithm, Singhal's Heuristic Algorithm, Raymond's Heuristic Algorithm.

UNIT - III

Distributed Deadlock Detection: Preliminaries, Deadlock Handling Strategies in Distributed Systems, Issues in Deadlock Detection and Resolution, Control Organizations for Distributed Deadlock Detection, Centralized- Deadlock – Detection Algorithms, Distributed Deadlock Detection Algorithms, Hierarchical Deadlock Detection Algorithms

UNIT - IV

Multiprocessor System Architectures: Introduction, Motivation for multiprocessor Systems, Basic Multiprocessor System Architectures Multi Processor Operating Systems: Introduction, Structures of Multiprocessor Operating Systems, Operating Design Issues, Threads, Process Synchronization, Processor Scheduling.

Distributed File Systems: Architecture, Mechanisms for Building Distributed File Systems, Design Issues

UNIT - V

Distributed Scheduling: Issues in Load Distributing, Components of a Load Distributed Algorithm, Stability, Load Distributing Algorithms, Requirements for Load Distributing, Task Migration, Issues in task Migration

Distributed Shared Memory: Architecture and Motivation, Algorithms for Implementing DSM, Memory Coherence, Coherence Protocols, Design Issues

TEXT BOOK:

1. Advanced Concepts in Operating Systems, Mukesh Singhal, Niranjana G. Shivaratri, TataMcGraw-Hill Edition 2001

REFERENCE BOOK:

AM3115PE: INFORMATION RETRIEVAL SYSTEMS

(Professional Elective - II)

| III-I: CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM3115PE | Professional | L | T | P | C | CIE | SEE | Total |
| | Elective - II | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: None | | | | | | | | |

Course Objectives:

- To learn the important concepts and algorithms in IRS
- To understand the data/file structures that are necessary to design, and implement information retrieval (IR) systems.

Course Outcomes:

- Ability to apply IR principles to locate relevant information large collections of data
- Ability to design different document clustering algorithms
- Implement retrieval systems for web search tasks.
- Design an Information Retrieval System for web search tasks.

UNIT - I

Introduction to Information Retrieval Systems: Definition of Information Retrieval System, Objectives of Information Retrieval Systems, Functional Overview, Relationship to Database Management Systems, Digital Libraries and Data Warehouses

Information Retrieval System Capabilities: Search Capabilities, Browse Capabilities, Miscellaneous Capabilities

UNIT - II

Cataloging and Indexing: History and Objectives of Indexing, Indexing Process, Automatic Indexing, Information Extraction

Data Structure: Introduction to Data Structure, Stemming Algorithms, Inverted File Structure, N-Gram Data Structures, PAT Data Structure, Signature File Structure, Hypertext and XML Data Structures, Hidden Markov Models

UNIT - III

Automatic Indexing: Classes of Automatic Indexing, Statistical Indexing, Natural Language, Concept Indexing, Hypertext Linkages

Document and Term Clustering: Introduction to Clustering, Thesaurus Generation, Item Clustering, Hierarchy of Clusters

UNIT - IV

User Search Techniques: Search Statements and Binding, Similarity Measures and Ranking, Relevance Feedback, Selective Dissemination of Information Search, Weighted Searches of Boolean Systems, Searching the INTERNET and Hypertext

Information Visualization: Introduction to Information Visualization, Cognition and Perception, Information Visualization Technologies

UNIT - V

Text Search Algorithms: Introduction to Text Search Techniques, Software Text Search Algorithms, Hardware Text Search Systems

Multimedia Information Retrieval: Spoken Language Audio Retrieval, Non-Speech Audio Retrieval, Graph Retrieval, Imagery Retrieval, Video Retrieval

TEXT BOOK:

1. Information Storage and Retrieval Systems – Theory and Implementation, Second Edition, Gerald J. Kowalski, Mark T. Maybury, Springer

REFERENCE BOOKS:

1. Frakes, W.B., Ricardo Baeza-Yates: Information Retrieval Data Structures and Algorithms, Prentice Hall, 1992.
2. Information Storage & Retrieval By Robert Korfhage – John Wiley & Sons.
3. Modern Information Retrieval By Yates and Neto Pearson Education.

AM3116PE: DISTRIBUTED DATABASES

(Professional Elective - II)

| III-I: CSE(AI&ML) | | | | | | | | |
|---------------------|----------------------------|-------------------------|---|---|------------------|-----------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM3116PE | Professional Elective - II | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | Total Classes:60 | | | |
| Prerequisites: None | | | | | | | | |

Course Objectives:

- The purpose of the course is to enrich the previous knowledge of database systems and exposing the need for distributed database technology to confront with the deficiencies of the centralized database systems.
- Introduce basic principles and implementation techniques of distributed database systems.
- Equip students with principles and knowledge of parallel and object-oriented databases.
- Topics include distributed DBMS architecture and design; query processing and optimization; distributed transaction management and reliability; parallel and object database management systems.

Course Outcomes:

- Understand theoretical and practical aspects of distributed database systems.
- Study and identify various issues related to the development of distributed database system.
- Understand the design aspects of object-oriented database system and related development.

UNIT - I

Introduction; Distributed Data Processing, Distributed Database System, Promises of DDBSs, Problem areas.

Distributed DBMS Architecture: Architectural Models for Distributed DBMS, DDMBS Architecture.

Distributed Database Design: Alternative Design Strategies, Distribution Design issues, Fragmentation, Allocation.

UNIT - II

Query processing and decomposition: Query processing objectives, characterization of query processors, layers of query processing, query decomposition, localization of distributed data.

Distributed query Optimization: Query optimization, centralized query optimization, distributed query optimization algorithms.

UNIT - III

Transaction Management: Definition, properties of transaction, types of transactions, distributed concurrency control: serializability, concurrency control mechanisms & algorithms, time - stamped & optimistic concurrency control Algorithms, deadlock Management.

UNIT - IV

Distributed DBMS Reliability: Reliability concepts and measures, fault-tolerance in distributed systems, failures in Distributed DBMS, local & distributed reliability protocols, site failures and network partitioning.

Parallel Database Systems: Parallel database system architectures, parallel data placement, parallel query processing, load balancing, database clusters.

UNIT - V

Distributed object Database Management Systems: Fundamental object concepts and models, object distributed design, architectural issues, object management, distributed object storage, object query Processing.

Object Oriented Data Model: Inheritance, object identity, persistent programming languages, persistence of objects, comparison OODBMS and ORDBMS

TEXT BOOKS:

1. M. Tamer OZSU and Patuck Valduriez: Principles of Distributed Database Systems, Pearson Edn. Asia, 2001.
2. Stefano Ceri and Giuseppe Pelagatti: Distributed Databases, McGraw Hill.

REFERENCE BOOK:

1. Hector Garcia-Molina, Jeffrey D. Ullman, Jennifer Widom: "Database Systems: The Complete Book", Second Edition, Pearson International Edition

AM3117PE: MOBILE COMPUTING

(PROFESSIONAL ELECTIVE - II)

| III-I: CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM3117PE | Professional | L | T | P | C | CIE | SEE | Total |
| | Elective - II | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: None | | | | | | | | |

Course Objectives:

- To make the student understand the concept of mobile computing paradigm, its novel applications and limitations.
- To understand the typical mobile networking infrastructure through a popular GSM protocol
- To understand the issues and solutions of various layers of mobile networks, namely MAC layer, Network Layer & Transport Layer
- To understand the database issues in mobile environments & data delivery models.
- To understand the ad hoc networks and related concepts.
- To understand the platforms and protocols used in mobile environment.

Course Outcomes:

- Able to think and develop new mobile application.
- Able to take any new technical issue related to this new paradigm and come up with a solution(s).
- Able to develop new ad hoc network applications and/or algorithms/protocols.
- Able to understand & develop any existing or new protocol related to mobile environment

UNIT - I

Introduction: Mobile Communications, Mobile Computing – Paradigm, Promises/Novel Applications and Impediments and Architecture; Mobile and Handheld Devices, Limitations of Mobile and Handheld Devices.

GSM – Services, System Architecture, Radio Interfaces, Protocols, Localization, Calling, Handover, Security, New Data Services, GPRS, CSHSD, DECT.

UNIT – II

(Wireless) Medium Access Control (MAC): Motivation for a specialized MAC (Hidden and exposed terminals, Near and far terminals), SDMA, FDMA, TDMA, CDMA, Wireless LAN/(IEEE 802.11)

Mobile Network Layer: IP and Mobile IP Network Layers, Packet Delivery and Handover Management, Location Management, Registration, Tunneling and Encapsulation, Route Optimization, DHCP.

UNIT – III

Mobile Transport Layer: Conventional TCP/IP Protocols, Indirect TCP, Snooping TCP, Mobile TCP, Other Transport Layer Protocols for Mobile Networks.

Database Issues: Database Hoarding & Caching Techniques, Client-Server Computing & Adaptation, Transactional Models, Query processing, Data Recovery Process & QoS Issues.

UNIT - IV

Data Dissemination and Synchronization: Communications Asymmetry, Classification of Data Delivery Mechanisms, Data Dissemination, Broadcast Models, Selective Tuning and Indexing Methods, Data

Synchronization – Introduction, Software, and Protocols

UNIT - V

Mobile Adhoc Networks (MANETs): Introduction, Applications & Challenges of a MANET, Routing, Classification of Routing Algorithms, Algorithms such as DSR, AODV, DSDV, etc. , Mobile Agents, Service Discovery.

Protocols and Platforms for Mobile Computing: WAP, Bluetooth, XML, J2ME, Java Card, Palm OS, Windows CE, Symbian OS, Linux for Mobile Devices, Android.

TEXT BOOKS:

| Contact Classes: NIL | Tutorial classes: NIL | Practical classes: 36 | | | Total Classes:36 | | | |
| Prerequisites: | | | | | | | | |

LIST OF PROGRAMS:

1. Write an R-Program to print Hello World
2. Write an R-Program to take input from user.
3. Write an R-Program to demonstrate working with operators (Arithmetic, Relational, Logical, Assignment operators).
4. Write an R Program to Check if a Number is Odd or Even
5. Write an R Program to check if the given Number is a Prime Number
6. Write an R Program to Find the Factorial of a Number
7. Write an R Program to Find the Factors of a Number
8. Write an R Program to Find the Fibonacci sequence Using Recursive Function
9. Write an R Program to Make a Simple Calculator
10. Write an R Program to Find L.C.M of two numbers
11. Write an R Program to create a Vector and to access elements in a Vector
12. Write an R Program to create a Matrix and access rows and columns using functions *colnames()* and *rownames()* .
13. Write an R Program to create a Matrix using *cbind()* and *rbind()* functions.
14. Write an R Program to create a Matrix from a Vector using *dim()* function.
15. Write an R Program to create a List and modify its components.
16. Write an R Program to create a Data Frame.
17. Write an R Program to access a Data Frame like a List.
18. Write an R Program to access a Data Frame like a Matrix.
19. Write an R Program to create a Factor.
20. Write an R Program to Access and Modify Components of a Factor.
21. Write an R Program to create an S3 Class and S3 Objects.
22. Write an R Program to write a own generic function in S3 Class.
23. Write an R Program to create an S4 Class and S4 Objects.
24. Write an R Program to write a own generic function in S4 Class.
25. Write an R Program to create Reference Class and modify its Methods.

AM3106PC: DESIGN AND ANALYSIS OF ALGORITHMS LAB

| III-I: CSE(AI&ML) | | | | | | | | |
|----------------------|-----------------------|-----------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |

| Contact Classes: NIL | Tutorial classes: NIL | Practical classes: 36 | | | | Total Classes:36 | | |
| Prerequisites: | | | | | | | | |

Course Objectives:

- To write programs in java to solve problems using divide and conquer strategy.
- To write programs in java to solve problems using backtracking strategy.
- To write programs in java to solve problems using greedy and dynamic programming techniques.

Course Outcomes:

- Ability to write programs in java to solve problems using algorithm design techniques such as Divide and Conquer, Greedy, Dynamic programming, and Backtracking.

List of Experiments:

1. Write a java program to implement Quick sort algorithm for sorting a list of integers in ascending order
2. Write a java program to implement Merge sort algorithm for sorting a list of integers in ascending order.
 - i. Write a java program to implement the dfs algorithm for a graph.
 - ii. Write a java program to implement the bfs algorithm for a graph.
3. Write a java program to implement backtracking algorithm for the N-queens problem.
4. Write a java program to implement the backtracking algorithm for the sum of subsets problem.
5. Write a java program to implement the backtracking algorithm for the Hamiltonian Circuits problem.
6. Write a java program to implement greedy algorithm for job sequencing with deadlines.
7. Write a java program to implement Dijkstra's algorithm for the Single source shortest path problem.
8. Write a java program that implements Prim's algorithm to generate minimum cost spanning tree.
9. Write a java program that implements Kruskal's algorithm to generate minimum cost spanning tree
10. Write a java program to implement Floyd's algorithm for the all pairs shortest path problem.
11. Write a java program to implement Dynamic Programming algorithm for the 0/1 Knapsack problem.
12. Write a java program to implement Dynamic Programming algorithm for the Optimal Binary Search Tree Problem.

INTRODUCTION:

The introduction of the Advanced Communication Skills Lab is considered essential at 3rd year level. At this stage, the students need to prepare themselves for their careers which may require them to listen to, read, speak and write in English both for their professional and interpersonal communication in the globalized context.

The proposed course should be a laboratory course to enable students to use 'good' English and perform the following:

- Gathering ideas and information to organize ideas relevantly and coherently.
- Engaging in debates.
- Participating in group discussions.
- Facing interviews.
- Writing project/research reports/technical reports.
- Making oral presentations.
- Writing formal letters.
- Transferring information from non-verbal to verbal texts and vice-versa.
- Taking part in social and professional communication.

OBJECTIVES:

This Lab focuses on using multi-media instruction for language development to meet the following targets:

- To improve the students' fluency in English, through a well-developed vocabulary and enable them to listen to English spoken at normal conversational speed by educated English speakers and respond appropriately in different socio-cultural and professional contexts.
- Further, they would be required to communicate their ideas relevantly and coherently in writing.
- To prepare all the students for their placements.

SYLLABUS:

The following course content to conduct the activities is prescribed for the Advanced English Communication Skills (AECS) Lab:

- Activities on Fundamentals of Inter-personal Communication and Building

Vocabulary - Starting a conversation – responding appropriately and relevantly – using the right body language

- Role Play in different situations & Discourse Skills- using visuals - Synonyms and antonyms, word roots, one-word substitutes, prefixes and suffixes, study of word origin, business vocabulary, analogy, idioms and phrases, collocations & usage of vocabulary.
- Activities on Reading Comprehension –General Vs Local comprehension, reading for facts, guessing meanings from context, scanning, skimming, inferring meaning, critical reading& effectivegoogling.
- Activities on Writing Skills – Structure and presentation of different types of writing – *letter writing/Resume writing/ e-correspondence/Technical report writing/* – planning for writing – improving one’s writing.
- Activities on Presentation Skills – Oral presentations (individual and group) through JAM sessions/seminars/PPTs and written presentations through posters/projects/reports/e-mails/assignments etc.
- Activities on Group Discussion and Interview Skills – Dynamics of group discussion, intervention, summarizing, modulation of voice, body language, relevance, fluency and organization of ideas and rubrics for evaluation- Concept and process, pre-interview planning, opening strategies, answering strategies, interview through tele-conference & video-conference and MockInterviews.

MINIMUM REQUIREMENT:

The Advanced English Communication Skills (AECS) Laboratory shall have the following infrastructural facilities to accommodate at least 35 students in the lab:

- Spacious room with appropriate acoustics.
- Round Tables with movable chairs
- Audio-visual aids
- LCD Projector
- Public Address system
- P – IV Processor, Hard Disk – 80 GB, RAM–512 MB Minimum, Speed – 2.8 GHZ
- T. V, a digital stereo & Camcorder
- Headphones of High quality

SUGGESTED SOFTWARE:

The software consisting of the prescribed topics elaborated above should be procured and used.

- Oxford Advanced Learner’s Compass, 7th Edition
- DELTA’s key to the Next Generation TOEFL Test: Advanced Skill Practice.
- Lingua TOEFL CBT Insider, by Dream tech
- TOEFL & GRE (KAPLAN, AARCO & BARRONS, USA, Cracking GRE by CLIFFS)

AM3201PC: MACHINE LEARNING

| III-II: CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM3201PC | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: | | | | | | | | |

Course Objectives

- This course explains machine learning techniques such as decision tree learning, Bayesian learning etc.
- To understand computational learning theory.
- To study the pattern comparison techniques.

Course Outcomes

- Understand the concepts of computational intelligence like machine learning
- Ability to get the skill to apply machine learning techniques to address the real time problems in different areas
- Understand the Neural Networks and its usage in machine learning application.

UNIT - I

Introduction - Well-posed learning problems, designing a learning system, Perspectives and issues in machine learning Concept learning and the general to specific ordering – introduction, a concept learning task, concept learning as search, find-S: finding a maximally specific hypothesis, version spaces and the candidate elimination algorithm, remarks on version spaces and candidate elimination, inductive bias.

Decision Tree Learning – Introduction, decision tree representation, appropriate problems for decision tree learning, the basic decision tree learning algorithm, hypothesis space search in decision tree learning, inductive bias in decision tree learning, issues in decision tree learning.

UNIT - II

Artificial Neural Networks-1– Introduction, neural network representation, appropriate problems for neural network learning, perceptions, multilayer networks and the back-propagation algorithm.

Artificial Neural Networks-2- Remarks on the Back-Propagation algorithm, An illustrative example: face recognition, advanced topics in artificial neural networks.

Evaluation Hypotheses – Motivation, estimation hypothesis accuracy, basics of sampling theory, a general approach for deriving confidence intervals, difference in error of two hypotheses, comparing learning algorithms.

UNIT - III

Bayesian learning – Introduction, Bayes theorem, Bayes theorem and concept learning, Maximum Likelihood and least squared error hypotheses, maximum likelihood hypotheses for predicting probabilities, minimum description length principle, Bayes optimal classifier, Gibbs algorithm, Naïve Bayes classifier, an example: learning to classify text, Bayesian belief networks, the EM algorithm.

Computational learning theory – Introduction, probably learning an approximately correct hypothesis, sample complexity for finite hypothesis space, sample complexity for infinite hypothesis spaces, the mistake bound model of learning.

Instance-Based Learning- Introduction, k -nearest neighbour algorithm, locally weighted regression, radial basis functions, case-based reasoning, remarks on lazy and eager learning.

UNIT- IV

Genetic Algorithms – Motivation, Genetic algorithms, an illustrative example, hypothesis space search, genetic programming, models of evolution and learning, parallelizing genetic algorithms.

Learning Sets of Rules – Introduction, sequential covering algorithms, learning rule sets: summary, learning First-Order rules, learning sets of First-Order rules: FOIL, Induction as inverted deduction, inverting resolution.

Reinforcement Learning – Introduction, the learning task, Q -learning, non-deterministic, rewards and actions, temporal difference learning, generalizing from examples, relationship to dynamic programming.

UNIT - V

Analytical Learning-1- Introduction, learning with perfect domain theories: PROLOG-EBG, remarks on explanation-based learning, explanation-based learning of search control knowledge.

Analytical Learning-2-Using prior knowledge to alter the search objective, using prior knowledge to augment search operators.

Combining Inductive and Analytical Learning – Motivation, inductive-analytical approaches to learning, using prior knowledge to initialize the hypothesis.

AM3202PC: COMPILER DESIGN

| III-II: CSE(AI&ML) | | | | | | | | |
|--------------------|---------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM3202PC | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: | | | | | | | | |

Course Objectives:

- Introduce the major concepts of language translation and compiler design and impart the knowledge of practical skills necessary for constructing a compiler.
- Topics include phases of compiler, parsing, syntax directed translation, type checking use of symbol tables, code optimization techniques, intermediate code generation, code generation and data flow analysis.

Course Outcomes:

- Demonstrate the ability to design a compiler given a set of language features.
- Demonstrate the knowledge of patterns, tokens & regular expressions for lexical analysis.
- Acquire skills in using lex tool & yacc tool for developing a scanner and parser.
- Design and implement LL and LR parsers
- Design algorithms to do code optimization in order to improve the performance of a program in terms of space and time complexity.
- Design algorithms to generate machine code.

UNIT - I

Introduction: The structure of a compiler, the science of building a compiler, programming language basics

Lexical Analysis: The Role of the Lexical Analyzer, Input Buffering, Recognition of Tokens, The Lexical-Analyzer Generator Lex, Finite Automata, From Regular Expressions to Automata, Design of a Lexical-Analyzer Generator, Optimization of DFA-Based Pattern Matchers.

UNIT - II

Syntax Analysis: Introduction, Context-Free Grammars, Writing a Grammar, Top-Down Parsing, Bottom-Up Parsing, Introduction to LR Parsing: Simple LR, More Powerful LR Parsers, Using Ambiguous Grammars and Parser Generators.

UNIT - III

Syntax-Directed Translation: Syntax-Directed Definitions, Evaluation Orders for SDD's, Applications of Syntax-Directed Translation, Syntax-Directed Translation Schemes, Implementing L-Attributed SDD's.

Intermediate-Code Generation: Variants of Syntax Trees, Three-Address Code, Types and Declarations, Type Checking, Control Flow, Switch-Statements, Intermediate Code for Procedures.

UNIT - IV

Run-Time Environments: Stack Allocation of Space, Access to Nonlocal Data on the Stack, Heap Management, Introduction to Garbage Collection, Introduction to Trace-Based Collection.

Code Generation: Issues in the Design of a Code Generator, The Target Language, Addresses in the Target Code, Basic Blocks and Flow Graphs, Optimization of Basic Blocks, A Simple Code Generator, Peephole Optimization, Register Allocation and Assignment, Dynamic Programming Code-Generation.

UNIT - V

Machine-Independent Optimization: The Principal Sources of Optimization, Introduction to Data-Flow Analysis, Foundations of Data-Flow Analysis, Constant Propagation, Partial-Redundancy Elimination, Loops in Flow Graphs.

TEXT BOOK:

1. Compilers: Principles, Techniques and Tools, Second Edition, Alfred V. Aho, Monica S. Lam, Ravi Sethi, Jeffrey D. Ullman.

AM3203PC: COMPUTER NETWORKS

| III-II: CSE(AI&ML) | | | | | | | | |
|--------------------|---------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM3203PC | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: | | | | | | | | |

Course Objectives

- The objective of the course is to equip the students with a general overview of the concepts and fundamentals of computer networks.
- Familiarize the students with the standard models for the layered approach to communication between machines in a network and the protocols of the various layers.

Course Outcomes

- Gain the knowledge of the basic computer network technology.
- Gain the knowledge of the functions of each layer in the OSI and TCP/IP reference model.
- Obtain the skills of subnetting and routing mechanisms.
- Familiarity with the essential protocols of computer networks, and how they can be applied in network design and implementation.

UNIT - I

Network hardware, Network software, OSI, TCP/IP Reference models, Example Networks: ARPANET, Internet.

Physical Layer: Guided Transmission media: twisted pairs, coaxial cable, fiber optics, Wireless transmission.

UNIT - II

Data link layer: Design issues, framing, Error detection and correction.

Elementary data link protocols: simplex protocol, A simplex stop and wait protocol for an error-free channel, A simplex stop and wait protocol for noisy channel.

Sliding Window protocols: A one-bit sliding window protocol, A protocol using Go-Back-N, A protocol using Selective Repeat, Example data link protocols.

Medium Access sub layer: The channel allocation problem, Multiple access protocols: ALOHA, Carrier sense multiple access protocols, collision free protocols. Wireless LANs, Data link layer switching.

UNIT - III

Network Layer: Design issues, Routing algorithms: shortest path routing, Flooding, Hierarchical routing, Broadcast, Multicast, distance vector routing, Congestion Control Algorithms, Quality of Service, Internetworking, The Network layer in the internet.

UNIT - IV

Transport Layer: Transport Services, Elements of Transport protocols, Connection management, TCP and UDP protocols.

UNIT - V

Application Layer –Domain name system, SNMP, Electronic Mail; the World WEB, HTTP, Streaming audio and video.

AM3207PE: AI AND ANALYTICS
(PROFESSIONAL ELECTIVE –III)

| III-II: CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Week | | | Credits | Max Marks | | |
| AM3207PE | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nil | | | | Total Classes:60 | | |
| Prerequisites: | | | | | | | | |

Course Objectives

- The objective of the course is to equip the students with a general overview of the concepts and fundamentals of AI & Analytics.
- Familiarize the students with the applications in the domains such as banking, retail and healthcare.

Course Outcomes

- Gain the knowledge of AI and Analytics.
- Able to apply to different domains.

UNIT – I

Analytics and AI Strategy for Business Transfer

Re-engineering Business to think AI and Analytics – Robust Data Monetization Strategy – Accelerated Decision-making with Real-Time Analytics – Analytics as a Service Model – Analytics-Led Enterprise Transformation.

UNIT – II

Banking Industry Transformed by Analytics and AI

Redefining Banking Industry – AI powered financial services – Fraud Mitigation through AI – Reorienting Customer Retention and Risk Management – Advantage of AI in Fintech Companies – AI-Driven Transformations in Insurance – Adopting Digital Based Insurance Model.

UNIT – III

Redefining Healthcare and Life Sciences

AI adoption in Healthcare – Real-world Evidence Based Analytics improving Treatment outcomes – Leveraging Patient and Drug similarity Analytics – AI : A Boon to the Life Science Industry – Analytics and Genomics.

UNIT – IV

Analytics and AI in Retail

AI-powered shopping experience – Emergence of Smart Consumers – Recommendation Engines for Personalizing Experiences – Evolution of Smart Retailers – Omnichannel Experiences – Fluid Supply Chain Transformation.

UNIT – V

Exponential Technologies underpinned by Analytics and AI

Beating Cyberattacks with Analytics – Connected Car Technology reshaping Automotive Industry – IoT Analytics – Cryptocurrency Analytics – Chatbots – Redefining the Talent Landscape.

AM3208PE: REINFORCEMENT LEARNING
(PROFESSIONAL ELECTIVE –III)

| III-II: CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Week | | | Credits | Max Marks | | |
| AM3208PE | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nil | | | | Total Classes:60 | | |
| Prerequisites: | | | | | | | | |

Course Objectives

The aim of the course will be to familiarize the students with the

- basic concepts
- state-of-the-art research literature in deep reinforcement learning.

Course Outcomes

After completion the students will be able to

- structure a reinforcement learning problem,
- understand and apply basic RL algorithms for simple sequential decision making problems in uncertain conditions.
- evaluate the performance of the solution
- Interpret state-of-the-art RL research and communicate their results.

UNIT – I

Monte-Carlo Methods

Monte-Carlo methods: policy evaluation, rollouts, on policy and off-policy learning, importance sampling

UNIT – II

Temporal Difference Learning

Temporal Difference learning: TD prediction, Optimality of TD(0), SARSA, Q-learning, Games and after states, Maximization Bias and Double Learning.

UNIT – III

Eligibility Traces

Eligibility traces: n-step TD prediction, TD(lambda), forward and backward views, Q(lambda), SARSA(lambda), replacing traces and accumulating traces.

UNIT – IV

Function Approximation

Function Approximation: Value prediction, gradient descent methods, linear function approximation, Control algorithms, Fitted Iterative Methods, Deep Q-learning.

UNIT – V

Computer Vision

Policy Gradient methods: non-associative learning - REINFORCE algorithm, exact gradient methods, estimating gradients, approximate policy gradient algorithms, actor-critic methods, Asynchronous Advantage Actor-Critic.

Hierarchical RL: MAXQ framework, Options framework, HAM framework, Option discovery algorithms. Case studies: Elevator dispatching, Samuel's checker player, TD- gammon, Acrobot, Helicopter piloting, Alpha Go

AM3209PE: COMPUTER VISION
(PROFESSIONAL ELECTIVE –III)

| III-II: CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM3209PE | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: | | | | | | | | |

Course Objectives

- To study the development of algorithms and techniques to analyze and interpret the visible world around us.
- Be familiar with both the theoretical and practical aspects of computing with images.
- To understand the basic concepts of Computer Vision.
- Understand the geometric relationships between 2D images and the 3D world.

Course Outcomes

- Understand the fundamental problems of computer vision.
- Implement various techniques and algorithms used in computer vision.
- Analyze and evaluate critically the building and integration of computer vision algorithms.
- Demonstrate awareness of the current key research issues in computer vision.

UNIT – I

Overview, computer imaging systems, lenses, Image formation and sensing, Image analysis, pre-processing and binary image analysis.

UNIT – II

Edge detection, Edge detection performance, Hough transform, corner detection.

UNIT – III

Segmentation, Morphological filtering, Fourier transform.

UNIT – IV

Feature extraction, shape, histogram, color, spectral, texture, using CVIP tools, Feature analysis, feature vectors, distance /similarity measures, data pre- processing.

UNIT – V

Dimensionality Reduction: PCA, LDA, ICA, and Non-parametric methods.

Books and References

AM3210PE: VIRTUAL REALITY
(PROFESSIONAL ELECTIVE –III)

| III-II:CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Week | | | Credits | Max Marks | | |
| AM3210PE | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nil | | | | Total Classes:60 | | |
| Prerequisites: | | | | | | | | |

Course Objectives

- This course is designed to give historical and modern overviews and perspectives on virtual reality.
- It describes the fundamentals of sensation, perception, technical and engineering aspects of virtual reality systems.

Course Outcomes

- Describe how VR systems work and list the applications of VR.
- Understand the design and implementation of the hardware that enables VR systems to be built.
- Understand the system of human vision and its implication on perception and rendering.
- Explain the concepts of motion and tracking in VR systems.
- Describe the importance of interaction and audio in VR systems.

UNIT – I

Defining Virtual Reality, History of VR, Human Physiology and Perception, Key Elements of Virtual Reality Experience, Virtual Reality System, Interface to the Virtual World-Input & output- Visual,Aural & Haptic Displays, Applications of Virtual Reality.

UNIT – II

Representation of the Virtual World, Visual Representation in VR, Aural Representation in VR and Haptic Representation in VR

UNIT – III

Geometric Models, Changing Position and Orientation, Axis-Angle Representations of Rotation,
Viewing Transformations, Chaining the Transformations, Human Eye, eye movements & implications for VR.

UNIT – IV

Visual Perception - Perception of Depth, Perception of Motion, Perception of Color, Combining Sources of Information

Visual Rendering -Ray Tracing and Shading Models, Rasterization, Correcting Optical Distortions, Improving Latency and Frame Rates

UNIT – V

Motion in Real and Virtual Worlds- Velocities and Accelerations, The Vestibular System, Physics in the Virtual World, Mismatched Motion and Vection

Tracking- Tracking 2D & 3D Orientation, Tracking Position and Orientation, Tracking Attached

Bodies

AM3211PE: ROBOTICS
(PROFESSIONAL ELECTIVE –III)

| III-II: CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM3211PE | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nil | | | | Total Classes:60 | | |
| Prerequisites: | | | | | | | | |

Course Objectives

- The objective of this course is to enlighten the students about the fundamentals of robotic systems.
- To understand the basics of robot, Robot Transformations and Sensors, Micro/Nano robotic systems and to program them for functioning.

Course Outcomes

- The students will be able to identify components of robot.
- Will able to program robots.

UNIT – I

Robot anatomy-Definition, law of robotics, History and Terminology of Robotics-Accuracy and repeatability of Robotics-Simple problems- Specifications of Robot-Speed of Robot-Robot joints and links-Robot classifications-Architecture of robotic systems-Robot Drive systems- Hydraulic, Pneumatic and Electric system.

UNIT – II

Mechanical grippers-Slider crank mechanism, Screw type, Rotary actuators, cam type-Magnetic grippers-Vacuum grippers-Air operated grippers-Gripper force analysis-Gripper design-Simple problems-Robot controls-Point to point control, Continuous path control, Intelligent robot-Control system for robot joint-Control actions-Feedback devices-Encoder, Resolver, LVDT-Motion Interpolations-Adaptive control

UNIT – III

Robot kinematics-Types- 2D, 3D Transformation-Scaling, Rotation, Translation-Homogeneous coordinates, multiple transformation-Simple problems. Sensors in robot – Touch sensors-Tactile sensor – Proximity and range sensors – Robotic vision sensor-Force sensor-Light sensors, Pressure sensors.

UNIT – IV

Robot programming-Introduction-Types- Flex Pendant- Lead through programming, Coordinate systems of Robot, Robot controller- major components, functions-Wrist Mechanism-Interpolation- Interlock commands- Operating mode of robot, Jogging-Types, Robot specifications- Motion commands, end effectors and sensors commands.

UNIT – V

Robot Languages-Classifications, Structures- VAL- language commands motion control, hand control, program control, pick and place applications, palletizing applications using VAL, Robot welding application using VAL program-WAIT, SIGNAL and DELAY command for communications using simple applications. RAPID- language basic commands- Motion Instructions- Pick and place operation using Industrial robot- manual mode, automatic mode, subroutine command based programming. Move-master command language- Introduction, syntax, simple problems. VAL- II programming-basic commands, applications- Simple problem using conditional statements-Simple pick and place applications-Production rate calculations using robot. AML Language-General description, elements and functions, Statements, constants and variables-Program control statements- Operating systems, Motion, Sensor commands- Data processing.

CS3211OE: INTRODUCTION TO DATA SCIENCE
(Open Elective- I)

| III-II:CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Week | | | Credits | Max Marks | | |
| CS3211OE | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: | | | | | | | | |

Course Objectives:

- Learn data science project concepts
- Learn to collect data and process
- Learn to visualize data

Course Outcomes:

- Able to collect data from various resources and process data
- Able to plot data using various methods
- Able to develop and evaluate models

Unit – I: Introduction

Introduction to Data Science – Evolution of Data Science – Data Science Roles – Stages in a Data Science Project – Applications of Data Science in various fields – Data Security Issues.

Unit – II: Data Collection and Data Pre-Processing

Data Collection Strategies – Data Pre-Processing Overview – Data Cleaning – Data Integration and Transformation – Data Reduction – Data Discretization.

Unit – III: Exploratory Data Analytics

Descriptive Statistics – Mean, Standard Deviation, Skewness and Kurtosis – Box Plots – Pivot Table – Heat Map – Correlation Statistics – ANOVA.

Unit – IV: Model Development

Simple and Multiple Regression – Model Evaluation using Visualization – Residual Plot Distribution Plot – Polynomial Regression and Pipelines – Measures for In-sampleEvaluation – Prediction and Decision Making.

Unit – V: Model Evaluation

Generalization Error – Out-of-Sample Evaluation Metrics – Cross Validation – Over fitting Under Fitting and Model Selection – Prediction by using Ridge Regression – Testing multiple Parameters by using Grid Search.

CS3212OE: DATA MINING
(Open Elective- I)

| III-II:CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| CS3212OE | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: | | | | | | | | |

Course Objectives:

- Learn data mining concepts understand association rules mining.
- Discuss classification algorithms learn how data is grouped using clustering techniques.
- To develop the abilities of critical analysis to data mining systems and applications.
- To implement practical and theoretical understanding of the technologies for data mining
- To understand the strengths and limitations of various data mining models

Course Outcomes:

- Ability to perform the preprocessing of data and apply mining techniques on it.
- Ability to identify the association rules, classification and cluster large datasets.
- Ability to solve real world problems in business and scientific information using data mining
- Ability to classify web pages, extracting knowledge from the web

UNIT-I

Introduction to Data Mining: Introduction, What is Data Mining, Definition, KDD, Challenges, Data Mining Tasks, Data Preprocessing, Data Cleaning, Missing data, Dimensionality Reduction, Feature Subset Selection, Discretization and Binaryization, Data Transformation; Measures of Similarity and Dissimilarity-Basics.

UNIT-II

Association Rules: Problem Definition, Frequent Item Set Generation, The APRIORI Principle, Support and Confidence Measures, Association Rule Generation; APRIORI Algorithm, The Partition Algorithms, FP-Growth Algorithms, Compact Representation of Frequent Item Set-Maximal Frequent Item Set, Closed Frequent Item Set.

UNIT-III

Classification: Problem Definition, General Approaches to solving a classification problem, Evaluation of Classifiers, Classification techniques, Decision Trees-Decision tree Construction, Methods for Expressing attribute test conditions, Measures for Selecting the Best Split, Algorithm for Decision tree Induction; Naive-Bayes Classifier, Bayesian Belief Networks; K-Nearest Neighbor classification-Algorithm and Characteristics.

UNIT-IV

Clustering: Problem Definition, Clustering Overview, Evaluation of Clustering Algorithms, Partitioning Clustering- K-Means Algorithm, K-Means Additional issues, PAM Algorithm; Hierarchical Clustering-Agglomerative Methods and divisive methods, Basic Agglomerative Hierarchical Clustering Algorithm, Specific techniques, Key Issues in Hierarchical Clustering, Strengths and Weakness; Outlier Detection.

UNIT-V

Web and Text Mining: Introduction,web mining,web content mining,web structure mining, we usage mining, Text mining –unstructured text, episode rule discovery for texts ,hierarchy of categories ,text clustering.

CS32130E: COMPUTER FORENSICS
(Open Elective- I)

| III-II:CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| CS32130E | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: | | | | | | | | |

Course Objectives:

- To understand the cyberspace.
- To understand the **forensics** fundamentals.
- To understand the evidence capturing process.
- To understand the preservation of **digital** evidence.

Course Outcomes:

- Students will understand the usage of computers in forensic, and how to use various forensic tools for a wide variety of investigations.
- It gives an opportunity to students to continue their zeal in research in computer forensics.

UNIT-I

Computer Forensics Fundamentals: What is Computer Forensics?

Forensics in Law Enforcement, Computer Forensics Assistance to Human Resources/ Employment Proceedings, Computer Forensics Services, Benefits of Professional Forensics Methodology, Steps taken by Computer Forensics Specialists Types of Computer Forensics Technology: Types of Military Computer Forensic Technology, Types of Law Enforcement — Computer Forensic Technology — Types of Business Computer Forensic Technology Computer Forensics Evidence and Capture: Data Recovery Defined — Data Back-up and Recovery — The Role of Back-up in Data Recovery — The Data-Recovery Solution.

UNIT-II

Evidence Collection and Data Seizure: Why Collect Evidence? Collection Options — Obstacles — Types of Evidence — The Rules of Evidence — Volatile Evidence — General Procedure — Collection and Archiving — Methods of Collection — Artifacts — Collection Steps — Controlling Contamination: The Chain of Custody Duplication and Preservation of Digital Evidence: Preserving the Digital Crime Scene —Computer Evidence Processing Steps — Legal Aspects of Collecting and Preserving Computer Forensic Evidence ComputerImageVerificationandAuthentication:SpecialNeedsofEvidentialAuthentication— PracticalConsideration—PracticalImplementation.

UNIT-III

Computer Forensics analysis and validation: Determining what data to collect and analyze, validating forensic data, addressing data-hiding techniques, performing remote acquisitions

Network Forensics: Network forensics overview, performing live acquisitions, developing standard procedures for network forensics, using network tools, examining the honey net project.

Processing Crime and Incident Scenes: Identifying digital evidence, collecting evidence in private-sector incident scenes, processing law enforcement crime scenes, preparing for a search, securing a computer incident or crime scene, seizing digital evidence at the scene, storing digital evidence, obtaining a digital hash, reviewing a case

UNIT-IV

Current Computer Forensic tools:

evaluating computer forensic tool needs, computer forensics software tools, computer forensics hardware tools, validating and testing forensics software E-Mail Investigations: Exploring the role of e-mail in investigation, exploring the roles of the client and server in e-mail, investigating e-mail crimes and violations, understanding e-mail servers, using specialized e-mail forensic tools.

Cellphone and mobile device forensics: Understanding mobile device forensics, understanding acquisition procedures for cellphones and mobile devices.

UNIT-V

Working with Windows and DOS Systems: understanding file systems, exploring Microsoft File Structures, Examining NTFS disks, Understanding whole disk encryption, windows registry, Microsoft startup tasks, MS-DOS startup tasks, virtual machines.

TEXT BOOKS

1. Computer Forensics, Computer Crime Investigation by John R. Vacca, Firewall Media, New Delhi.
2. Computer Forensics and Investigations by Nelson, Phillips and Finger, Stuart, CENGAGE Learning

4. Homeland Security, Techniques & Technologies by Jesus Mena, Firewall Media.
5. Software Forensics Collecting Evidence from the Scene of a Digital Crime by Robert
6. M. Slade, TMH 2005
7. Windows Forensics by Chad Steel, Wiley India Edition.

EE3211OE: ELECTRICAL INSTALLATION AND COSTING
(Open Elective- I)

| III-II:CSE(AI&ML) | | | | | | | | |
|---|------------------------|------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| EE3211OE | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nil | | | | Total Classes:60 | | |
| Prerequisites: Basic Electrical Engineering | | | | | | | | |

Course Objectives:

- To emphasize the estimation and costing aspects of all electrical equipment, installation and designs on the cost viability.
- To design and estimation of wiring
- To design over head and under ground distribution lines, substations and illumination

Course Outcomes: After Completion of this course, student will be able to

- Understand the design considerations of electrical installations.
- Design electrical installation for buildings and small industries.
- Identify and design the various types of light sources for different applications.

UNIT-I

Design Considerations of Electrical Installations: Electric Supply System, Three phase four wire distribution system, Protection of Electric Installation against over load, short circuit and Earth fault, Earthing, General requirements of electrical installations, testing of installations, Indian Electricity rules, Neutral and Earth wire, Types of loads, Systems of wiring, Service connections, Service Mains, Sub-Circuits, Location of Outlets, Location of Control Switches, Location of Main Board and Distribution board, Guidelines for Installation of Fittings, Load Assessment, Permissible voltage drops and sizes of wires, estimating and costing of Electric installations.

UNIT-II

Electrical Installation for Different Types of Buildings and Small Industries: Electrical installations for residential buildings– estimating and costing of material, Electrical installations for commercial buildings, Electrical installations for small industries.

UNIT-III

Over head and Under ground Transmission and Distribution Lines: Introduction, Supports for transmission lines, Distribution lines – Materials used, Underground cables, Mechanical Design of over headlines, Design of under ground cables.

UNIT-IV

Substations: Introduction, Types of substations, Outdoor substation – Pole mounted type, Indoor substations–Floor mounted type.

UNIT-V

Design of Illumination Schemes: Introduction, Terminology in illumination, laws of illumination, various types of light sources, Practical lighting schemes LED, CFL and OCFL differences.

Text Books:

1. “K.B.Raina,S.K.Bhattacharya”,“Electrical Design Estimating and Costing”,New Age International Publisher,2010.
2. “Er.V.K.Jain,Er.Amitabh Bajaj”,“Design of Electrical Installations”,University Science Press.

Reference Books:

2. Guide for Electrical layout in residential buildings, Indian Standard Institution, IS:4648-1968.
3. Electrical Installation buildings Indian Standard Institution, IS:2032.
4. Code of Practice for selection, Installation of Maintenance of fuse (voltage not exceeding 650 V), Indian Standard Institution, IS:3106-1966.
5. Code of Practice for earthing, Indian Standard Institution, IS:3043-1966.
6. Code of Practice for Installation and Maintenance of induction motors, Indian Standard Institution, IS:900-1965.
7. Code of Practice for electrical wiring, Installations (system voltage not exceeding 650 Volts), Indian Standard Institution, IS:2274-1963.
8. “Gupta J.B.,Katson,Ludhiana”,“Electrical Installation, estimating and costing”,S.K.Kataria and sons,2013.

EE3212OE: ELECTRICAL ENGINEERING MATERIALS
(Open Elective- I)

| III-II:CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|--|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| EE3212OE | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Null | | | | Total Classes:60 | | |
| Prerequisites: | | Engineering chemistry and Engineering Physics-II | | | | | | |

Course Objective:

- To understand the importance of various materials used in electrical engineering and obtain a qualitative analysis of their behavior and applications.

Course Outcomes: After completion of this course, the student will be able to

- Understand various types of dielectric materials, their properties in various conditions.
- Evaluate magnetic materials and their behavior.
- Evaluate semi conductor materials and technologies.
- Acquire Knowledge on Materials used in electrical engineering and applications.

UNIT-I

Dielectric Materials: Dielectric as Electric Field Medium, leakage currents, dielectric loss, dielectric strength, break down voltage, break down in solid dielectrics, flash over, liquid dielectrics, electric conductivity in solid, liquid and gaseous dielectrics, Ferro magnetic materials, properties of ferro magnetic materials in static fields, spontaneous, polarization, curie point, anti-ferro magnetic materials, piezo electric materials, pyro electric materials.

UNIT- II

Magnetic Materials: Classification of magnetic materials, spontaneous magnetization inferro magnetic materials, magnetic Anisotropy, Magnetostriction, diamagnetism, magnetically soft and hard materials, special purpose materials, feebly magnetic materials, Ferrites, cast and cermet permanent magnets, a geing of magnets. Factors effecting permeability and hysteresis

UNIT-III

Semiconductor Materials: Properties of semiconductors, Silicon wafers, integration techniques, Large and very large scale integration techniques(VLSI)

UNIT- IV

Materials for Electrical Applications: Materials used for Resistors, rheostats, heaters, transmission line structures, stranded conductors, bimetallic fuses, soft and hard solders, electric contact materials, electric carbon materials, thermocouple materials. Solid, Liquid and Gaseous insulating materials, Effect of moisture on insulation.

UNIT- V

Special Purpose Materials: Refractory Materials, Structural Materials, Radio active Materials, Galvanization and Impregnation of materials, Processing of electronic materials, Insulating varnishes and coolants, Properties and applications of mineral oils, Testing of Transformer oils per ISI.

Text Books:

1. "R.K. Rajput", "A course in Electrical Engineering Materials", Laxmi Publications, 2009
2. "T.K. Basak", "A course in Electrical Engineering Materials", New Age Science Publications 2009

Reference Books:

**EC3211OE: FUNDAMENTALS OF INTERNET OF THINGS
(Open Elective- I)**

| III-II:CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| | Core | L | T | P | C | CIE | SEE | Total |
| EC3211OE | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: | | | | | | | | |

Course Objectives:

1. Understand the concepts of Internet of Things and able to build IoT applications
2. Learn the programming and use of Arduino and Raspberry Pi boards.
3. Known about data handling and analytics in SDN.

Course Outcomes: Upon completing this course, the student will be able to

1. Known basic protocols in sensor networks.
2. Program and configure Arduino boards for various designs.
3. Python programming and interfacing for Raspberry Pi.
4. Design IoT applications in different domains.

UNIT-I

Introduction to Internet of Things, Characteristics of IOT, Physical design of IoT, Functional blocks of IoT, Sensing, Actuation, Basics of Networking, Communication Protocols, Sensor Networks.

UNIT- II

Machine-to-Machine Communications, Difference between IOT and M2M, Interoperability in IOT, Introduction to Arduino Programming, Integration of Sensors and Actuators with Arduino,

UNIT-III

Introduction to Python programming, Introduction to Raspberry Pi, Interfacing Raspberry Pi with basic peripherals, Implementation of IOT with Raspberry Pi

UNIT-IV

Implementation of IOT with Raspberry Pi, Introduction to Software defined Network(SDN), SDN for IOT, Data Handling and Analytics,

UNIT-V

Cloud Computing, Sensor- Cloud, Smart Cities and Smart Homes, Connected Vehicles, Smart Grid, Industrial IOT,Case Study:Agriculture, Healthcare, Activity Monitoring

TEXTBOOKS:

1. "The Internet of Things: Enabling Technologies, Platforms, and Use Cases", by Pethuru Raj and Anupama C. Raman (CRC Press)
2. "Make sensors": Terokarvinen, kemo, karvinen and villeyvaltokari, 1st edition, makermedia, 2014.
3. "Internet of Things: A Hands-on Approach", by Arshdeep Bahga and Vijay Madisetti

REFERENCE BOOKS:

1. Vijay Madisetti, Arshdeep Bahga, "Internet of Things: A Hands-On Approach"
2. Walteneagus Dargie, Christian Poellabauer, "Fundamentals of Wireless Sensor Networks: Theory and Practice"
3. Beginning Sensornetworks with Arduino and Raspberry Pi- Charles Bell, Apress, 2013

ME3211OE: OPERATIONS RESEARCH
(Open Elective- I)

| III-II:CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| ME3211OE | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nil | | | | Total Classes:60 | | |
| Prerequisites: None | | | | | | | | |

Prerequisites: None

Course Objectives: Understanding the mathematical importance of development of model in a particular optimization model for the issue and solving it.

Course Outcome: Understanding the problem, identifying variables & constants, Formulation of optimization model and applying appropriate optimization technique.

UNIT.I

Development-definition- characteristics and phases- Types of models- Operations Research models- applications.

Allocation: Linear Programming Problem Formulation-Graphical solution- Simplex method-Artificial variable techniques: Two-phase method, Big-M method.

UNIT.II

Transportation problem-Formulation- Optimal solution, unbalanced transportation problem- Degeneracy.

Assignment problem-Formulation- Optimal solution,-Variants of Assignment problem- Travelling salesman problem.

UNIT.III

Sequencing. Introduction- Flow-Shop sequencing- n jobs through two machines-n jobs through three machines- Job shop sequencing- two jobs through 'm' machines- graphical model Replacement: Introduction- Replacement of items that deteriorate with time- when money value is not counted and counted- Replacement of items that fail completely- Group Replacement.

UNIT.IV

Theory of Games: Introduction- Terminology- Solution of games with saddle points and without saddle points. 2x2 games- dominance

principle- $m \times n$ games- Graphical method.

Inventory: Introduction- Single item, Deterministic models- purchase inventory models with one price break and multiple price breaks- Stochastic models -Demand may be discrete variable or continuous variable- single period model and no setup cost.

UNIT.V

Waiting lines: Introduction- Terminology- Single channel- Poisson arrivals and Exponential service times with infinite population and finite population models.

Dynamic Programming: Introduction- Terminology, Bellman's principle of optimality Applications of Dynamic programming- shortest path problem- linear programming problem.

TEXTBOOK:

1. Operations Research/J.K.Sharma/MacMilan
2. Introduction to OR/Hillier&Libemann/TMH

REFERENCE BOOKS:

1. Introduction to OR/Taha/PHI
2. Operations Research/NVSRaju/SMSEducation/3rdRevisedEdition
3. Operations Research /A.M.Natarajan, P.Balasubramaniam, A.Tamilara si/Pearson Education.

ME3212OE: FUNDAMENTALS OF MECHANICAL ENGINEERING
(Open Elective- I)

| III-II: CSE(AI&ML) | | | | | | | | |
|---------------------|---------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| | Core | L | T | P | C | CIE | SEE | Total |
| ME3212OE | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: None | | | | | | | | |

Objectives:

- To understand the fundamentals of mechanical systems.
- To understand and appreciate significance of mechanical engineering in different Fields of engineering.

UNIT-I

Introduction: Prime movers and its types, Concept of Force, Pressure, Energy, Work, Power, System, Heat, Temperature, Specific heat capacity, Change of state, Path, Process, Cycle, Internal energy, Enthalpy, Statements of Zeroth Law and First law.

Energy: Introduction and applications of Energy sources like Fossil fuels, Nuclear fuels, Hydel, Solar, wind, and bio- fuels, Environmental issues like Global warming and Ozone depletion.

UNIT-II

Properties of gases: Gas laws, Boyle's law, Charles's law, Combined gas law, Gas constant, Relation between C_p and C_v , Various non-flow processes like constant volume process, constant pressure process, Isothermal process, Adiabatic process, Poly-tropic process
Properties of Steam: Steam formation, Types of Steam, Enthalpy, Specific volume, Internal energy and dryness fraction of steam, use of Steam tables, steam calorimeters.

Steam Boilers: Introduction, Classification, Cochran, Lancashire and Babcock and Wilcox boiler, functioning of different mountings and accessories.

UNIT-III

Heat Engines: Heat Engine cycle and Heat Engine, working substances, Classification of heat engines, Description and thermal efficiency of Carnot; Rankine; Otto cycle and Diesel cycles.

Internal Combustion Engines: Introduction, Classification, Engine details, four- stroke/two-stroke cycle Petrol/ Diesel engines, Indicated power, Brake Power, Efficiencies.

UNIT-IV

Pumps: Types and operation of Reciprocating, Rotary and Centrifugal pumps, Priming

Air Compressors: Types and operation of Reciprocating and Rotary air compressors, significance of Multistage.

Refrigeration & Air Conditioning: Refrigerant, Vapor compression refrigeration system, vapor absorption refrigeration system, Domestic Refrigerator, Window and split air conditioners.

UNIT-V

Couplings, Clutches and Brakes: Construction and applications of Couplings (Box; Flange; Pintype flexible; Universal and Oldham), Clutches (Disc and Centrifugal), and Brakes (Block; Shoe; Band and Disc).

Transmission of Motion and Power: Shaft and axle, Belt drive, Chain drive, Friction drive, Gear drive.

Engineering Materials: Types and applications of Ferrous & Nonferrous metals, Timber, Abrasive material, silica, ceramics, glass, graphite, diamond, plastic and polymer.

TEXT BOOKS:

1. Basic Mechanical Engineering/ Pravin Kumar/ Pearson
2. Introduction to Engineering Materials
/B.K.Agrawal/McGrawHill

REFERENCE BOOKS:

2. Thermal Science and Engineering/Dr.D.S.Kumar/Kataria

ME3213OE: METALLURGY OF NON-METALLURGISTS
(Open Elective- I)

| III-II: CSE(AI&ML) | | | | | | | | |
|---------------------|---------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| | Core | L | T | P | C | CIE | SEE | Total |
| ME3212OE | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: None | | | | | | | | |

Course Objectives:

- To describe the basic principles of metallurgy and the importance of metallurgy in various disciplines of engineering.
- Gain a thorough knowledge about heat treatment of steels.
- Gain knowledge about properties and uses of cast irons and non-ferrous metals.
- Gain a working knowledge of basic testing methods for metals.

Course Outcomes:

At the end of the course Student would be able

- To use and apply metallurgy in his own branch of engineering.
- The student will be able to justify the various testing methods adopted for metals.

UNIT-I

Introduction: Crystal structure and defects, Crystal structure of metals, Classification of steels, Carbon steels.

Engineering Materials: Types and applications of Ferrous & Nonferrous metals, Timber, Abrasive material, silica, ceramics, glass, graphite, diamond, plastic and polymer.

UNIT-II

Heat Treatment of Steels: The Iron carbon systems, Common phases in steels, Annealing, Normalizing, Hardening and tempering.

UNIT-III

Cast irons: Properties and applications of Ductile irons, Malleable irons, Compacted graphite iron.

UNIT-IV

Non Ferrous Metals: Properties and applications of Light Metals (Al, Be, Mg, Ti), Superalloys.

UNIT-V

Testing of Metals: Hardness testing, Tensile Testing, Impact Testing, Fatigue Testing.

TEXT BOOKS:

1. Materials Science and Engineering, An introduction. W D Callister, Jr., Adapted by R. Balasubramaniam, John Wiley & Sons, NY, Indian edition, 2007
2. Introduction to Physical Metallurgy– S H Avner, TATA McGRAW HILL, 1997
3. Mechanical Metallurgy– G. E. Dieter

REFERENCE BOOKS:

1. Engineering Physical Metallurgy and Heat treatment– Y. L. Lakhtin
2. C. Suryanarayana, Experimental Techniques in Mechanics and Materials, John Wiley, John Wiley, NJ, USA, 2006
3. Foundations of Materials Science and Engineering– W. F. Smith

CE3211OE: BASICS OF CIVIL ENGINEERING
(Open Elective–I)

| III-II: CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| CE3211OE | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nill | | | | Total Classes:60 | | |
| Prerequisites: None | | | | | | | | |

Course objectives: The objectives of the course are:

- To explain the concepts of Civil Engineering.
- To Understand the Building Materials for construction
- To understand the concept of Transportation
- To explain the Soil Characteristics for best foundation
- To know the Drinking water Standards & Water Treatment Units.

Course Outcomes: On successful completion of this course, students should be able to:

- Identify different types of building materials for construction.
- Discuss types of Traffic Flow Characteristics.
- To know the soil classification and its properties.
- Distinguish and understand Drinking water and Waste water properties.

UNIT-I

Building Materials for Construction Bricks & Cement:qualities of good bricks, types of brick, ingredients of cement, types of cement, Grade of cement.

Concrete & Steel: Properties of cement concrete, types of concrete based on usage & properties and uses of various types of steel, Admixtures.

Building components: lintels, walls, staircases, typesof floors, types of roofs, doors, windows-material-types, Finishers-Plastering, Painting, Tiles.

UNIT-II

TransportationEngineering Highway: History and Importance of Highways, Classification of roads, highway cross section, typesof Pavement.

Traffic: Roadsafety- Traffic signals & its types. Road intersections & its types. Railway: Permanent way, Components parts its functions.

Airway: Typical Airport layout, Factors for airport site selection

UNIT-III Geotechnical Engineering

Soil formation and its three phase diagram, I.S. Classification of soils. Permeability & its Factors affecting, capillary rise.

Compaction – factors affecting compaction.

Geology- Different types & its properties of Rocks & Minerals.

UNIT-IV Water Resources & Irrigation Engineering

Hydrologic cycle, Forms of precipitation, measurement of precipitation by Symons rain gauge.

Abstractions from precipitation: Infiltration, Evaporation & Runoff & their Factors affecting.

Irrigation: Water requirement of crops, canal & Its losses, Types of lining- Advantages and disadvantages. Types of dams, Factors affecting selection of dam site. Tunneling- Purposes of tunneling.

UNIT-V Environmental Engineering

Drinking Water: types of water demand– factors affecting water quality and testing– drinking water standards. Layout and general outline of water treatment units.

Waste water: Waste water treatment plant Flow diagram. Waste water collection, man holes & house drainage.

Air & Sound pollution– Effects & Controlling methods.

TEXT BOOKS

1. Building Construction by B.C. Punmia, Ashok Kumar Jain and Arun Kumar Jain– Laxmi Publications (P) Ltd., New Delhi.
2. Transportation Engineering by Khanna & Justo
3. Geotechnical Engineering by Arora
4. Water Resources & Irrigation Engineering by SK Garg
5. Environmental Engineering by Dr. B.C. Punmia

CE3212OE: BUILDING MATERIALS AND CONSTRUCTION

(OpenElective-I)

| III-II: CSE(AI&ML) | | | | | | | | |
|-----------------------|------------------------|------------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| CE3212OE | Core | L | T | P | C | CIE | SEE | Total |
| | | 3 | 0 | 0 | 3 | 30 | 70 | 100 |
| Contact Classes:45 | Tutorial classes:15 | Practical classes: Nil | | | | Total Classes:60 | | |
| Prerequisites: None | | | | | | | | |

Course Objectives: The objectives of the course is to

- List the construction material.
- Explain different construction techniques
- Understand the building bye-laws
- Highlight the smart building materials

Course Outcomes: After the completion of the course student should be able to

- Define the Basic terminology that is used in the industry
- Categorize different building materials, properties and their uses

Unit-I

Cement: Introduction, ingredients of cement, types of cement, cement mortar uses. Concrete: Properties of cement concrete, materials, standard concrete mix proportions, curing of concrete, methods-effects of improper curing.

Unit-II

Bricks & Bricks masonry: qualities of good bricks, types of bricks, brick masonry and types of brick masonry

Timber: Structure of a tree, defects in timber, seasoning of timber, qualities of good timber, important Indian timber trees.

Unit-III

Construction Materials: Stone- type of building stones, glass- types based on usage, plastics- advantages and disadvantages, uses, ceramics- types used in building industry.

Structural steel: properties and uses of various types of steel, types. Girders- types & uses

Unit-IV

Building components: lintels, walls, staircases, types of floors, types of roofs, doors, windows- material- types.

Fire protection: hazards, classification of fire-resistant materials and constructions.

Unit-V

Building planning: principles of building planning, classification of buildings and building bylaws. Building Services: Plumbing-water distribution, sanitary-lines and fittings, ventilations: functional requirements, system of ventilations.

TEXTBOOKS:

1. Building Materials and Construction–Arora & Bindra, Dhanpat Roy Publications.
2. Building Materials and Construction by GC Sahu, Joygopal Jena McGraw hill Pvt Ltd 2015.
3. Building Construction by B. C. Punmia, Ashok Kumar Jain and Arun Kumar Jain - Laxmi Publications(P) Ltd., New Delhi.

REFERENCEBOOKS:

1. Building Materials by Duggal, New Age International.
2. Building Materials by P.C.Varghese, PHI.
3. Building Construction by PCVarghese PHI.
4. Construction Technology– Vol-I & II by R. Chubbey, Longman UK.
5. Alternate Building Materials and Technology, Jagadish, Venkatarama Reddy and others; New Age Publications.

AM3204PC: MACHINE LEARNING LAB

| III-II: CSE(AI&ML) | | | | | | | | |
|------------------------|-------------------------|-----------------------|---|---|---------|------------------|-----|-------|
| Course Code | Category | Hours/Weak | | | Credits | Max Marks | | |
| AM3204PC | Core | L | T | P | C | CIE | SEE | Total |
| | | 0 | 0 | 3 | 1.5 | 30 | 70 | 100 |
| Contact Classes:NIL | Tutorial classes:NIL | Practical classes: 36 | | | | Total Classes:36 | | |
| Prerequisites: | | | | | | | | |

Course Objective: The objective of this lab is to get an overview of the various machine learning techniques and can able to demonstrate them using python.

Course Outcomes: After the completion of the course the student can able to:

- Understand complexity of Machine Learning algorithms and their limitations;
- Understand modern notions in data analysis-oriented computing;
- Becapable of confidently applying common Machine Learning algorithms in practice and implementing their own;
- Becapable of performing experiments in Machine Learning using real-world data.

List of Experiments

1. The probability that it is Friday and that a student is absent is 3 %. Since there are 5 schooldays in a week, the probability that it is Friday is 20 %. What is the probability that a student is absent given that today is Friday? Apply Baye's rule in python to get the result.(Ans:15%)
2. Extract the data from database using python
3. Implement k-nearest neighbours classification using python
4. Given the following data, whichh specify classifications fornine combinations of VAR1 and VAR2 predict a classification for a case where VAR1=0.906 and VAR2=0.606, using the result of k-means clustering with 3 means (i.e.,3 centroids)

| VAR1 | VAR2 | CLASS |
|-------|-------|-------|
| 1.713 | 1.586 | 0 |
| 0.180 | 1.786 | 1 |
| 0.353 | 1.240 | 1 |
| 0.940 | 1.566 | 0 |
| 1.486 | 0.759 | 1 |
| 1.266 | 1.106 | 0 |
| 1.540 | 0.419 | 1 |
| 0.459 | 1.799 | 1 |
| 0.773 | 0.186 | 1 |

5. The following training examples map descriptions of individuals on to high, medium and low credit-worthiness.

medium skiing design single
 twenties no-> high Risk high golf
 trading married
 forties yes-> low Risk low speed way
 transport married thirties yes-> med
 Risk medium foot ball banking single
 thirties yes -> low Risk high flying
 media married fifties yes-> high Risk
 low football security single
 twenties no-> med Risk medium golf
 media single
 thirties yes -> med Risk medium golf
 transport married
 forties yes -> low Risk high skiing
 banking single thirties yes ->
 high Risk low golf unemployed
 married forties yes-> high Risk

Input attributes are (from left to right) income, recreation, job, status, age-group, home-owner. Find the unconditional probability of 'golf' and the conditional probability of 'single' given 'medRisk' in the dataset?

6. Implement linear regression using python.
7. Implement Naïve Bayes theorem to classify the English text
8. Implement an algorithm to demonstrate the significance of genetic algorithm
9. Implement the finite words classification system using Back-propagation algorithm

| Contact Classes:NIL | Tutorial classes:NIL | Practical classes: 36 | | | | Total Classes:36 | | |
| Prerequisites: | | | | | | | | |

Course Objectives:

- To provide hands-on experience on web technologies
- To develop client-server application using web technologies
- To introduce server-side programming with Java servlets and JSP
- To understand the various phases in the design of a compiler.
- To understand the design of top-down and bottom-up parsers.
- To understand syntax directed translation schemes.
- To introduce lex and yacc tools.

Course Outcomes:

- Design and develop interactive and dynamic web applications using HTML, CSS, JavaScript and XML
- Apply client-server principles to develop scalable and enterprise web applications.
- Ability to design, develop, and implement a compiler for any language.
- Able to use lex and yacc tools for developing a scanner and a parser.
- Able to design and implement LL and LR parsers.

List of Experiments

Compiler Design Experiments

1. Write a LEX Program to scan reserved word & Identifiers of C Language
 2. Implement Predictive Parsing algorithm
 3. Write a C program to generate three address code.
 4. Implement SLR(1) Parsing algorithm
 5. Design LALR bottom up parser for the given language
- ```
<program>::= <block>
<block>::= {<variabledefinition><slist>}
 |{<slist>}
<variable definition>::=int<var deflist>;
<var deflist>::=<var dec> |<var dec>,<var deflist>
```

```

<var dec>::=<identifier> | <identifier>[<constant>]
<slist>::=<statement> | <statement>;<slist>
<statement>::=<assignment> | <if statement> | <while statement>
 | <block> | <print statement> | <empty>
<assignment>::=<identifier>=<expression>
| <identifier>[<expression>]=<expression>
<if statement> ::=if<bexpression> then<slist>
else<slist> end if
| if<bexpression>then<slist>end if
 <while statement>::=while<bexpression>do<slist>end do
 <print statement>::=print(<expression>)
 <expression>::=<expression><adding op><term> | <term> | <adding op><term>
 <bexpression>::=<expression><relop><expression>
 <relop>::= < | <= | == | >= | > | !=
 <addingop>::=+ | -
 <term>::=<term><multop><factor> | <factor>
 <multop>::=* | /
 <factor>::=<constant> | <identifier> | <identifier>[<expression>]
 | (<expression>)
 <constant>::=<digit> | <digit><constant>
 <identifier>::=<identifier><letterordigit> | <letter>
 <letterordigit>::=<letter> | <digit>
 <letter>::=a|b|c|d|e|f|g|h|i|j|k|l|m|n|o|p|q|r|s|t|u|v|w|x|y|z
 <digit>::=0|1|2|3|4|5|6|7|8|9
 <empty>has the obvious meaning

```

Comments (zero or more characters enclosed between the standard C/Java-style comment brackets /\*...\*/) can be inserted. The language has rudimentary support for 1-dimensional arrays. The declaration `int a[3]` declares an array of three elements, referenced as `a[0]`, `a[1]` and `a[2]`. Note also that you should worry about the scoping of names.

| Contact<br>Classes:NIL | Tutorial<br>classes:NIL | Practical classes: 36 |   |   |         | Total Classes:36 |     |       |
| Prerequisites:         |                         |                       |   |   |         |                  |     |       |

### Course Objectives:

- To understand the working principle of various communication protocols.
- To understand the network simulator environment and visualize a network topology and observe its performance.
- To analyze the traffic flow and the contents of protocol frames.

### Course Outcomes:

- Implement data link layer framing methods.
- Analyze error detection and error correction codes.
- Implement and analyze routing and congestion issues in network design.
- Implement Encoding and Decoding techniques used in presentation layer.
- To be able to work with different network tools.

### List of Experiments

1. Implement the data link layer framing methods such as character, character-stuffing and bitstuffing.
2. Write a program to compute CRC code for the polynomials CRC-12, CRC-16 and CRC CCIP
3. Develop a simple data link layer that performs the flow control using the sliding window protocol, and loss recovery using the Go-Back-N mechanism.
4. Implement Dijkstra's algorithm to compute the shortest path through a network
5. Take an example subnet of hosts and obtain a broadcast tree for the subnet.
6. Implement distance vector routing algorithm for obtaining routing tables at each node.
7. Implement data encryption and data decryption
8. Write a program for congestion control using Leaky bucket algorithm.
9. Write a program for frame sorting technique used in buffers.

10. Wireshark

- i. Packet Capture Using Wire shark
- ii. Starting Wire shark
- iii. Viewing Captured Traffic
- iv. Analysis and Statistics & Filters.

11. How to run Nmap scan

12. Operating System Detection using Nmap

13. Do the following using NS2 Simulator

- i. NS2 Simulator-Introduction
- ii. Simulate to Find the Number of Packets Dropped
- iii. Simulate to Find the Number of Packets Dropped by TCP/UDP
- iv. Simulate to Find the Number of Packets Dropped due to Congestion
- v. Simulate to Compare Data Rate& Throughput.
- vi. Simulate to Plot Congestion for Different Source/Destination
- vii. Simulate to Determine the Performance with respect to Transmission of Packets

## MC3002: CYBER SECURITY

| Contact Classes:45  | Tutorial classes:15 | Practical classes: Nill |   |   |         | Total Classes:60 |     |       |
| Prerequisites: None |                     |                         |   |   |         |                  |     |       |

### Course objectives:

- To familiarize various types of cyber-attacks and cyber-crimes
- To give an overview of the cyber laws
- To study the defensive techniques against these attacks

### Course Outcomes:

The students will be able to understand cyber-attacks, types of cyber crimes, cyber laws and also how to protect them self and ultimately the entire Internet community from such attacks.

### UNIT - I

**Introduction to Cyber Security:** Basic Cyber Security Concepts, layers of security, Vulnerability, threat, Harmful acts, Internet Governance – Challenges and Constraints, Computer Criminals, CIA Triad, Assets and Threat, motive of attackers, active attacks, passive attacks, Software attacks, hardware attacks, Spectrum of attacks, Taxonomy of various attacks, IP spoofing, Methods of defense, Security Models, risk management, Cyber Threats-Cyber Warfare, Cyber Crime, Cyber terrorism, Cyber Espionage, etc., Comprehensive Cyber Security Policy.

### UNIT - II

**Cyber space and the Law & Cyber Forensics:** Introduction, Cyber Security Regulations, Roles of International Law. The INDIAN Cyberspace, National Cyber Security Policy.

Introduction, Historical background of Cyber forensics, Digital Forensics Science, The Need for Computer Forensics, Cyber Forensics and Digital evidence, Forensics Analysis of Email, Digital Forensics Lifecycle, Forensics Investigation, Challenges in Computer Forensics, Special Techniques for Forensics Auditing.

### UNIT - III

**Cyber crime: Mobile and Wireless Devices:** Introduction, Proliferation of Mobile and Wireless Devices, Trends in Mobility, Credit card Frauds in Mobile and Wireless Computing Era, Security Challenges Posed by Mobile Devices, Registry Settings for Mobile Devices, Authentication service Security, Attacks on Mobile/Cell Phones, Mobile Devices: Security Implications for Organizations, Organizational Measures for Handling Mobile, Organizational Security Policies and Measures in Mobile Computing Era, Laptops.

#### **UNIT- IV**

**Cyber Security: Organizational Implications:** Introduction, cost of cybercrimes and IPR issues, web threats for organizations, security and privacy implications, social media marketing: security risks and perils for organizations, social computing and the associated challenges for organizations.

**Cybercrime and Cyber terrorism:** Introduction, intellectual property in the cyberspace, the ethical dimension of cybercrimes the psychology, mindset and skills of hackers and other cyber criminals.

#### **UNIT - V**

**Privacy Issues:** Basic Data Privacy Concepts: Fundamental Concepts, Data Privacy Attacks, Data linking and profiling, privacy policies and their specifications, privacy policy languages, privacy in different domains- medical, financial, etc.

Cybercrime: Examples and Mini-Cases

**Examples:** Official Website of Maharashtra Government Hacked, Indian Banks Lose Millions of Rupees, Parliament Attack, Pune City Police Bust Nigerian Racket, e-mail spoofing instances.

**Mini-Cases:** The Indian Case of online Gambling, An Indian Case of Intellectual Property Crime, Financial Frauds in Cyber Domain.

#### **TEXT BOOKS:**

1. Nina Godbole and Sunit Belpure, Cyber Security Understanding Cyber Crimes, Computer Forensics and Legal Perspectives, Wiley
2. B. B. Gupta, D. P. Agrawal, Haoxiang Wang, Computer and Cyber Security: Principles, Algorithm, Applications, and Perspectives, CRC Press, ISBN 9780815371335, 2018.

#### **REFERENCES:**

1. Cyber Security Essentials, James Graham, Richard Howard and Ryan Otson, CRC Press.
2. Introduction to Cyber Security, Chwan-Hwa(john) Wu, J. David Irwin, CRC Press T&F Group

## **B.Tech. IV Year I Sem.**

### **AM4101PC: INFORMATION SECURITY**

| IV-I: CSE(AI&ML)    |                     |                         |   |   |         |                  |     |       |
|---------------------|---------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code         | Category            | Hours/Week              |   |   | Credits | Max Marks        |     |       |
| AM4101PC            | Mandatory course    | L                       | T | P | C       | CIE              | SEE | Total |
|                     |                     | 3                       | 0 | 0 | 3       | 30               | 70  | 100   |
| Contact Classes:45  | Tutorial classes:15 | Practical classes: Nill |   |   |         | Total Classes:60 |     |       |
| Prerequisites: None |                     |                         |   |   |         |                  |     |       |

#### **Course Objectives:**

- Explain the objectives of information security
- Explain the importance and application of each of confidentiality, integrity, authentication and availability
- Understand various cryptographic algorithms.
- Understand the basic categories of threats to computers and networks
- Describe public-key cryptosystem.
- Describe the enhancements made to IPv4 by IPSec
- Understand Intrusions and intrusion detection
- Discuss the fundamental ideas of public-key cryptography.
- Generate and distribute a PGP key pair and use the PGP package to send an encrypted e- mail message.
- Discuss Web security and Firewalls

#### **Course Outcomes:**

- Student will be able to understand basic cryptographic algorithms, message and web Authentication and security issues.
- Ability to identify information system requirements for both of them such as client and server.
- Ability to understand the current legal issues towards information security.

#### **UNIT - I**

Security Concepts: Introduction, The need for security, Security approaches, Principles of security, Types of Security attacks, Security services, Security Mechanisms, A model for Network Security Cryptography Concepts and Techniques: Introduction, plain text and cipher text, substitution techniques, transposition techniques, encryption and decryption, symmetric and asymmetric key cryptography, steganography, key range and key size, possible types of attacks.

## **UNIT - II**

Symmetric key Ciphers: Block Cipher principles, DES, AES, Blowfish, RC5, IDEA, Block cipher operation, Stream ciphers, RC4.

Asymmetric key Ciphers: Principles of public key cryptosystems, RSA algorithm, Elgamal Cryptography, Diffie-Hellman Key Exchange, Knapsack Algorithm.

## **UNIT - III**

Cryptographic Hash Functions: Message Authentication, Secure Hash Algorithm (SHA-512), Message authentication codes: Authentication requirements, HMAC, CMAC, Digital signatures, Elgamal Digital Signature Scheme.

Key Management and Distribution: Symmetric Key Distribution Using Symmetric & Asymmetric Encryption, Distribution of Public Keys, Kerberos, X.509 Authentication Service, Public – Key Infrastructure

## **UNIT - IV**

Transport-level Security: Web security considerations, Secure Socket Layer and Transport Layer Security, HTTPS, Secure Shell (SSH)

Wireless Network Security: Wireless Security, Mobile Device Security, IEEE 802.11 Wireless LAN, IEEE 802.11i Wireless LAN Security

## **UNIT - V**

E-Mail Security: Pretty Good Privacy, S/MIME IP Security: IP Security overview, IP Security architecture, Authentication Header, Encapsulating security payload, Combining security associations, Internet Key Exchange

Case Studies on Cryptography and security: Secure Multiparty Calculation, Virtual Elections, Single sign On, Secure Inter-branch Payment Transactions, Cross site Scripting Vulnerability.

## **TEXT BOOKS:**

1. Cryptography and Network Security - Principles and Practice: William Stallings, Pearson Education, 6th Edition
2. Cryptography and Network Security: Atul Kahate, Mc Graw Hill, 3rd Edition

## **REFERENCE BOOKS:**

1. Cryptography and Network Security: C K Shyamala, N Harini, Dr T R Padmanabhan, Wiley India, 1st Edition.
2. Cryptography and Network Security: Forouzan Mukhopadhyay, Mc Graw Hill, 3rd Edition
3. Information Security, Principles, and Practice: Mark Stamp, Wiley India.
4. Principles of Computer Security: WM. Arthur Conklin, Greg White, TMH
5. Introduction to Network Security: Neal Krawetz, CENGAGE Learning
6. Network Security and Cryptography: Bernard Menezes, CENGAGE Learning.

## AM4102PC: DEEP LEARNING

| IV-I: CSE(AI&ML)    |                     |                         |   |   |         |                  |     |       |
|---------------------|---------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code         | Category            | Hours/Week              |   |   | Credits | Max Marks        |     |       |
| AM4102PC            | Mandatory course    | L                       | T | P | C       | CIE              | SEE | Total |
|                     |                     | 3                       | 0 | 0 | 3       | 30               | 70  | 100   |
| Contact Classes:45  | Tutorial classes:15 | Practical classes: Nill |   |   |         | Total Classes:60 |     |       |
| Prerequisites: None |                     |                         |   |   |         |                  |     |       |

### Course Objectives

- To introduce the fundamental techniques and principles of Neural Networks
- To study the different models in ANN and their applications
- To familiarize deep learning concepts with Convolutional Neural Network case studies

### Course Outcomes

- Able to understand basic concepts in Neural Networks and applications
- Distinguish different types of ANN architectures

### UNIT – I

Artificial Neural Networks

The Neuron – Activation Function – Gradient Descent – Stochastic Gradient Descent – Back Propagation – Business Problem.

### UNIT – II

Convolutional Neural Networks

Convolution Operation – ReLU layer – Pooling – Flattening – Full Conversion Layer – Softmax and Cross-Entropy.

### UNIT – III

Recurrent Neural Networks

RNN intuition – Tackling Vanishing Gradient Problem – Long Short-Term Memory – Building a RNN – Evaluating the RNN – Improving the RNN – Tuning the RNN.

### UNIT – IV

Boltzmann Machines

Introduction to Boltzmann Machine – Energy-Based Models – Restricted Boltzmann Machine – Contrastive Divergence – Deep Belief Networks – Deep Boltzmann Machine.

### UNIT – V

Computer Vision

Viola-Jones Algorithm – Haar-like Features – Integral Image – Training Classifiers – Adaptive Boosting – Cascading – Face Detection with Open CV.

**AM4107PE: GRAPH THEORY  
(PROFESSIONAL ELECTIVE-IV)**

| IV-I:CSE(AI&ML)     |                     |                         |   |   |         |                  |     |       |
|---------------------|---------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code         | Category            | Hours/Weak              |   |   | Credits | Max Marks        |     |       |
| AM4107PE            | Mandatory course    | L                       | T | P | C       | CIE              | SEE | Total |
|                     |                     | 3                       | 0 | 0 | 3       | 30               | 70  | 100   |
| Contact Classes:45  | Tutorial classes:15 | Practical classes: Nill |   |   |         | Total Classes:60 |     |       |
| Prerequisites: None |                     |                         |   |   |         |                  |     |       |

**Course Objectives:**

- To learn important classes of graph theoretic problems;
- To learn central theorems about trees, matching, connectivity.

**Course Outcomes:**

- Know some important classes of graph theoretic problems;
- Be able to formulate and prove central theorems about trees, matching, connectivity, colouring and planar graphs;
- Be able to describe and apply some basic algorithms for graphs;
- Be able to use graph theory as a modelling tool.

**UNIT - I**

Introduction-Discovery of graphs, Definitions, Subgraphs, Isomorphic graphs, Matrix representations of graphs, Degree of a vertex, Directed walks, paths and cycles, Connectivity in digraphs, Eulerian and Hamilton digraphs, Eulerian digraphs, Hamilton digraphs, Special graphs, Complements, Larger graphs from smaller graphs, Union, Sum, Cartesian Product, Composition, Graphic sequences, Graph theoretic model of the LAN problem, Havel-Hakimi criterion, Realization of a graphic sequence.

**UNIT - II**

Connected graphs and shortest paths - Walks, trails, paths, cycles, Connected graphs, Distance, Cut-vertices and cut-edges, Blocks, Connectivity, Weighted graphs and shortest paths, Weighted graphs, Dijkstra's shortest path algorithm, Floyd-Warshall shortest path algorithm.

**UNIT - III**

Trees- Definitions and characterizations, Number of trees, Cayley's formula, Kirchoff's matrix-tree theorem, Minimum spanning trees, Kruskal's algorithm, Prim's algorithm, Special classes of graphs, Bipartite Graphs, Line Graphs, Chordal Graphs, Eulerian Graphs, Fleury's algorithm, Chinese Postman problem, Hamilton Graphs, Introduction, Necessary conditions and sufficient conditions.

#### **UNIT - IV**

Independent sets coverings and matchings– Introduction, Independent sets and coverings: basic equations, Matchings in bipartite graphs, Hall's Theorem, Kőnig's Theorem, Perfect matchings in graphs, Greedy and approximation algorithms.

#### **UNIT - V**

Vertex Colorings- Basic definitions, Cliques and chromatic number, Mycielski's theorem, Greedy coloring algorithm, Coloring of chordal graphs, Brooks theorem, Edge Colorings, Introduction and Basics, Gupta-Vizing theorem, Class-1 and Class-2 graphs, Edge-coloring of bipartite graphs, Class-2 graphs, Hajos union and Class-2 graphs, A scheduling problem and equitable edge-coloring.

|                     |                     | 3                       | 0 | 0 | 3       | 30               | 70  | 100   |
| Contact Classes:45  | Tutorial classes:15 | Practical classes: Nill |   |   |         | Total Classes:60 |     |       |
| Prerequisites: None |                     |                         |   |   |         |                  |     |       |

**Course Objectives:**

- To provide an overview of principles of Embedded System
- To provide a clear understanding of role of firmware, operating systems in correlation with hardware systems.

**Course Outcomes:**

- Expected to understand the selection procedure of processors in the embedded domain.
- Design procedure of embedded firm ware.
- Expected to visualize the role of realtime operating systems in embedded systems.
- Expected to evaluate the correlation between task synchronization and latency issues

**UNIT - I**

Introduction to Embedded Systems: Definition of Embedded System, Embedded Systems Vs General Computing Systems, History of Embedded Systems, Classification of Embedded Systems, Major application areas, Purpose of Embedded Systems, Characteristics and Quality attributes of Embedded Systems.

**UNIT - II**

The Typical Embedded System: Core of the Embedded System, Memory, Sensors and Actuators, Communication Interface, Embedded Firmware, Other System components.

**UNIT - III**

Embedded Firmware Design and Development: Embedded Firmware Design, Embedded Firmware Development Languages, Programming in Embedded C.

**UNIT - IV**

RTOS Based Embedded System Design: Operating System basics, Types of Operating Systems, Tasks, Process, Threads, Multiprocessing and Multi-tasking, Task Scheduling, Threads-Processes- Scheduling putting them together, Task Communication, Task Synchronization, Device Drivers, How to choose an RTOS

## **UNIT - V**

Integration and Testing of Embedded Hardware and Firmware: Integration of Hardware and Firmware, Boards Bring up

The Embedded System Development Environment: The Integrated Development Environment (IDE), Types of files generated on Cross-Compilation, Disassembler/Decompiler, Simulators, Emulators and Debugging, Target Hardware Debugging, Boundary Scan.

| AM4109PE            | Mandatory course    | L                       | T | P | C       | CIE              | SEE | Total |
|                     |                     | 3                       | 0 | 0 | 3       | 30               | 70  | 100   |
| Contact Classes:45  | Tutorial classes:15 | Practical classes: Nill |   |   |         | Total Classes:60 |     |       |
| Prerequisites: None |                     |                         |   |   |         |                  |     |       |

**Course Objectives:**

- Identify the major categories and trends of e-commerce applications.
- Identify the essential processes of an e-commerce system.
- Identify several factors and web store requirements needed to succeed in e-commerce.
- Discuss the benefits and trade-offs of various e-commerce clicks and bricksalternatives.
- Understand the main technologies behind e-commerce systems and how thesetechnologies interact.
- Discuss the various marketing strategies for an online business.
- Define various electronic payment types and associated security risks and the ways toprotect against them.

**Course Outcomes:**

- Ability to identify the business relationships between the organizations and theircustomers
- Ability to perform various transactions like payment, data transfer and etc.

**UNIT - I**

Electronic Commerce-Frame work, anatomy of E-Commerce applications, E-Commerce Consumer applications, E-Commerce organization applications. Consumer Oriented Electronic commerce - Mercantile Process models.

**UNIT - II**

Electronic payment systems - Digital Token-Based, Smart Cards, Credit Cards, Risks in Electronic Payment systems. Inter Organizational Commerce - EDI, EDI Implementation, Value added networks. Intra Organizational Commerce - work Flow, Automation Customization and internal Commerce, Supply chain Management.

**UNIT - III**

Corporate Digital Library - Document Library, digital Document types, corporate Data Warehouses. Advertising and Marketing - Information based marketing, Advertising on Internet, on-line marketing process, market research. Consumer Search and Resource Discovery - Information search and Retrieval, Commerce Catalogues, Information Filtering. Multimedia - key multimedia concepts, Digital Video and electronic Commerce, Desktop video processing's, Desktop video conferencing

**UNIT – IV**

Web Marketing Strategies, Communicating with Different Market Segments, Beyond Market Segmentation: Customer Behavior and Relationship Intensity, Advertising on the Web, E- Mail Marketing, Search Engine Positioning and Domain Names, Selling to Businesses Online, Electronic Data Interchange, Supply Chain Management Using Internet Technologies, Electronic Marketplaces and Portals

**UNIT - V**

E-Business Revenue Models, Revenue Models for Online Business, Changing Strategies: Revenue Models in Transition, Revenue Strategy Issues for Online Businesses, Creating an Effective Business Presence Online, Web Site Usability, Virtual Communities, Mobile Commerce, Online Auctions

**TEXT BOOK:**

1. Frontiers of electronic commerce – Kalakata, Whinston, Pearson. (UNITS 1, 2, 3)
2. E-Business by Gary P. Schneider, - Cengage India Learning (UNITS 4, 5)

**REFERENCES:**

1. E-Commerce fundamentals and applications Hendry Chan, Raymond Lee, TharamDillon, Elizabeth Chang, John Wiley.
2. E-Commerce, S. Jaiswal – Galgotia.
3. E-Commerce, Efrain Turbon, Jae Lee, David King, H. Michael Chang.
4. Electronic Commerce – Gary P. Schneider – Thomson.
5. E-Commerce – Business, Technology, Society, Kenneth C. Taudon, Carol GuyericoTraver.

**AM4110PE: CLOUD COMPUTING  
(PROFESSIONAL ELECTIVE-IV)**

| IV-I:CSE(AI&ML)     |                     |                         |   |   |         |                  |     |       |

| Contact Classes:45  | Tutorial classes:15 | Practical classes: Nill |   |   |         | Total Classes:60 |     |       |
| Prerequisites: None |                     |                         |   |   |         |                  |     |       |

**Course Objectives:**

- This course provides an insight into cloud computing
- Topics covered include- distributed system models, different cloud service models, service- oriented architectures, cloud programming and software environments, resource management.

**Course Outcomes:**

- Ability to understand various service delivery models of a cloud computing architecture.
- Ability to understand the ways in which the cloud can be programmed and deployed.
- Understanding cloud service providers.

**UNIT - I**

Computing Paradigms: High-Performance Computing, Parallel Computing, Distributed Computing, Cluster Computing, Grid Computing, Cloud Computing, Bio computing, Mobile Computing, Quantum Computing, Optical Computing, Nano computing.

**UNIT - II**

Cloud Computing Fundamentals: Motivation for Cloud Computing, The Need for Cloud Computing, Defining Cloud Computing, Definition of Cloud computing, Cloud Computing Is a Service, Cloud Computing Is a Platform, Principles of Cloud computing, Five Essential Characteristics, Four Cloud Deployment Models

**UNIT - III**

Cloud Computing Architecture and Management:Cloud architecture, Layer, Anatomy of the Cloud, Network Connectivity in Cloud Computing, Applications, on the Cloud, Managing the Cloud, Managing the Cloud Infrastructure Managing the Cloud application, Migrating Application to Cloud, Phases of Cloud Migration Approaches for Cloud Migration.

#### **UNIT - IV**

Cloud Service Models: Infrastructure as a Service, Characteristics of IaaS. Suitability of IaaS, Pros and Cons of IaaS, Summary of IaaS Providers, Platform as a Service, Characteristics of PaaS, Suitability of PaaS, Pros and Cons of PaaS, Summary of PaaS Providers, Software as a Service, Characteristics of SaaS, Suitability of SaaS, Pros and Cons of SaaS, Summary of SaaS Providers, Other Cloud Service Models.

#### **UNIT V**

Cloud Service Providers: EMC, EMC IT, Captiva Cloud Toolkit, Google, Cloud Platform, Cloud Storage, Google Cloud Connect, Google Cloud Print, Google App Engine, Amazon Web Services, Amazon Elastic Compute Cloud, Amazon Simple Storage Service, Amazon Simple Queue ,service, Microsoft, Windows Azure, Microsoft Assessment and Planning Toolkit, SharePoint, IBM, Cloud Models, IBM Smart Cloud, SAP Labs, SAP HANA Cloud Platform, Virtualization Services Provided by SAP, Sales force, Sales Cloud, Service Cloud: Knowledge as a Service, Rack space, VMware, Manjra soft, Aneka Platform

#### **TEXT BOOK:**

1. Essentials of cloud Computing: K. Chandrasekhran, CRC press, 2014

#### **REFERENCE BOOKS:**

1. Cloud Computing: Principles and Paradigms by Rajkumar Buyya, James Broberg and Andrzej M. Goscinski, Wiley, 2011.
2. Distributed and Cloud Computing, Kai Hwang, Geoffery C. Fox, Jack J. Dongarra, Elsevier, 2012.
3. Cloud Security and Privacy: An Enterprise Perspective on Risks and Compliance, Tim Mather, Subra Kumaraswamy, Shahed Latif, O'Reilly, SPD, rp 2011.

**AM4111PE: AD-HOC & SENSOR NETWORKS**  
**(PROFESSIONAL ELECTIVE-IV)**

| IV-I: CSE(AI&ML)    |                     |                         |   |   |         |                  |     |       |
|---------------------|---------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code         | Category            | Hours/Weak              |   |   | Credits | Max Marks        |     |       |
| AM4111PE            | Mandatory course    | L                       | T | P | C       | CIE              | SEE | Total |
|                     |                     | 3                       | 0 | 0 | 3       | 30               | 70  | 100   |
| Contact Classes:45  | Tutorial classes:15 | Practical classes: Null |   |   |         | Total Classes:60 |     |       |
| Prerequisites: None |                     |                         |   |   |         |                  |     |       |

**Course Objectives:**

- To understand the concepts of sensor networks
- To understand the MAC and transport protocols for ad hoc networks
- To understand the security of sensor networks
- To understand the applications of adhoc and sensor networks

**Course Outcomes:**

- Ability to understand the state-of-the-art research in the emerging subject of Ad Hoc and Wireless Sensor Networks
- Ability to solve the issues in real-time application development based on ASN.
- Ability to conduct further research in the domain of ASN

**UNIT - I**

Introduction to Ad Hoc Networks - Characteristics of MANETs, Applications of MANETs and Challenges of MANETs.

Routing in MANETs - Criteria for classification, Taxonomy of MANET routing algorithms, Topology- based routing algorithms-Proactive: DSDV; Reactive: DSR, AODV; Hybrid: ZRP; Position-based routing algorithms-Location Services-DREAM, Quorum-based; Forwarding Strategies: Greedy Packet, Restricted Directional Flooding-DREAM, LAR.

**UNIT - II**

Data Transmission - Broadcast Storm Problem, Rebroadcasting Schemes-Simple-flooding, Probability-based Methods, Area-based Methods, Neighbor Knowledge-based: SBA, Multipoint Relaying, AHBP. Multicasting: Tree-based: AMRIS, MAODV; Mesh-based: ODMRP, CAMP; Hybrid: AMRoute, MCEDAR.

**UNIT - III**

Geocasting: Data-transmission Oriented-LBM; Route Creation Oriented-GeoTORA, MGR. TCP over Ad Hoc TCP protocol overview, TCP and MANETs, Solutions for TCP over Ad hoc

**UNIT - IV**

Basics of Wireless, Sensors and Lower Layer Issues: Applications, Classification of sensor networks, Architecture of sensor network, Physical layer, MAC layer, Link layer, Routing Layer.

**UNIT - V**

Upper Layer Issues of WSN: Transport layer, High-level application layer support, Adapting to the inherent dynamic nature of WSNs, Sensor Networks and mobile robots.

**TEXT BOOKS:**

1. Ad Hoc and Sensor Networks – Theory and Applications, Carlos Corderio Dharma P. Aggarwal, World Scientific Publications, March 2006, ISBN – 981–256–681–3.
2. Wireless Sensor Networks: An Information Processing Approach, Feng Zhao, Leonidas Guibas, Elsevier Science, ISBN – 978-1-55860-914-3 (Morgan Kauffman).

**AM4112PE: ADVANCED ALGORITHMS**  
**(PROFESSIONAL ELECTIVE - V)**

| IV-I:CSE(AI&ML)     |                     |                        |   |   |         |                  |     |       |
|---------------------|---------------------|------------------------|---|---|---------|------------------|-----|-------|
| Course Code         | Category            | Hours/Weak             |   |   | Credits | Max Marks        |     |       |
| AM4112PE            | Mandatory course    | L                      | T | P | C       | CIE              | SEE | Total |
|                     |                     | 3                      | 0 | 0 | 3       | 30               | 70  | 100   |
| Contact Classes:45  | Tutorial classes:15 | Practical classes: Nil |   |   |         | Total Classes:60 |     |       |
| Prerequisites: None |                     |                        |   |   |         |                  |     |       |

**Course Objectives:**

- Introduces the recurrence relations for analyzing the algorithms
- Introduces the graphs and their traversals.
- Describes major algorithmic techniques (divide-and-conquer, greedy, dynamic programming, Brute Force, Transform and Conquer approaches) and mention problems for which each technique is appropriate;
- Describes how to evaluate and compare different algorithms using worst-case, average-case and best-case analysis.
- Introduces string matching algorithms
- Introduces linear programming.

**Course Outcomes:**

- Ability to analyze the performance of algorithms
- Ability to choose appropriate data structures and algorithm design methods for a specified application
- Ability to understand how the choice of data structures and the algorithm design methods impact the performance of programs

**UNIT - I**

**Introduction:** Role of Algorithms in computing, Order Notation, Recurrences, Probabilistic Analysis and Randomized Algorithms. Sorting and Order Statistics: Heap sort, Quick sort and Sorting in Linear Time.

**Advanced Design and Analysis Techniques:** Dynamic Programming- Matrix chain Multiplication, Longest common Subsequence and optimal binary Search trees.

**UNIT - II**

**Greedy Algorithms** - Huffman Codes, Activity Selection Problem. Amortized Analysis.

**Graph Algorithms:** Topological Sorting, Minimum Spanning trees, Single Source Shortest Paths, Maximum Flow algorithms.

### **UNIT - III**

**Sorting Networks:** Comparison Networks, Zero-one principle, bitonic Sorting Networks, Merging Network, Sorting Network.

**Matrix Operations-** Strassen's Matrix Multiplication, Inverting matrices, Solving system of linear Equations

### **UNIT - IV**

**String Matching:** Naive String Matching, Rabin-Karp algorithm, matching with finite Automata, Knuth-Morris - Pratt algorithm.

### **UNIT- V**

**NP-Completeness and Approximation Algorithms:** Polynomial time, polynomial time verification, NP-Completeness and reducibility, NP-Complete problems. Approximation Algorithms- Vertex cover Problem, Travelling Sales person problem

### **TEXT BOOK:**

1. Introduction to Algorithms," T.H. Cormen, C.E. Leiserson, R.L. Rivest, and C. Stein, Third Edition, PHI.

### **REFERENCE BOOKS:**

1. Fundamentals of Computer Algorithms, Ellis Horowitz, Satraj Sahni and Rajasekharam, Galgotia publications pvt. Ltd.
2. Design and Analysis Algorithms - Parag Himanshu Dave, Himanshu Bhalchandra Dave Publisher: Pearson
3. Algorithm Design: Foundations, Analysis and Internet examples, M.T. Goodrich and R. Tomassia, John Wiley and sons.
4. Data structures and Algorithm Analysis in C++, Allen Weiss, Second edition, Pearson education.

**AM4113PE: REAL TIME SYSTEMS**  
**(PROFESSIONAL ELECTIVE - V)**

| IV-I:CSE(AI&ML)     |                     |                        |   |   |         |                  |     |       |
|---------------------|---------------------|------------------------|---|---|---------|------------------|-----|-------|
| Course Code         | Category            | Hours/Weak             |   |   | Credits | Max Marks        |     |       |
| AM4113PE            | Mandatory course    | L                      | T | P | C       | CIE              | SEE | Total |
|                     |                     | 3                      | 0 | 0 | 3       | 30               | 70  | 100   |
| Contact Classes:45  | Tutorial classes:15 | Practical classes: Nil |   |   |         | Total Classes:60 |     |       |
| Prerequisites: None |                     |                        |   |   |         |                  |     |       |

**Course Objectives:**

- To provide broad understanding of the requirements of Real Time Operating Systems.
- To make the student understand, applications of these Real Time features using case studies.

**Course Outcomes:**

- Be able to explain real-time concepts such as preemptive multitasking, task priorities, priority inversions, mutual exclusion, context switching, and synchronization, interrupt latency and response time, and semaphores.
- Able describe how a real-time operating system kernel is implemented.
- Able explain how tasks are managed.
- Explain how the real-time operating system implements time management.
- Discuss how tasks can communicate using semaphores, mailboxes, and queues.
- Be able to implement a real-time system on an embedded processor.
- Be able to work with real time operating systems like RT Linux, Vx Works, MicroC /OSII, TinyOs

**UNIT – I**

**Introduction:** Introduction to UNIX/LINUX, Overview of Commands, File I/O,( open, create, close, lseek, read, write), Process Control ( fork, vfork, exit, wait, waitpid, exec).

**UNIT - II**

**Real Time Operating Systems:** Brief History of OS, Defining RTOS, The Scheduler, Objects, Services, Characteristics of RTOS, Defining a Task, asks States and Scheduling, Task Operations, Structure, Synchronization, Communication and Concurrency. Defining Semaphores, Operations and Use, Defining Message Queue, States, Content, Storage, Operations and Use

### **UNIT - III**

**Objects, Services and I/O:** Pipes, Event Registers, Signals, Other Building Blocks, Component Configuration, Basic I/O Concepts, I/O Subsystem

### **UNIT - IV**

**Exceptions, Interrupts and Timers:** Exceptions, Interrupts, Applications, Processing of Exceptions and Spurious Interrupts, Real Time Clocks, Programmable Timers, Timer Interrupt Service Routines (ISR), Soft Timers, Operations.

### **UNIT - V**

**Case Studies of RTOS:** RT Linux, MicroC/OS-II, Vx Works, Embedded Linux, and Tiny OS.

### **TEXT BOOK:**

1. Real Time Concepts for Embedded Systems – Qing Li, Elsevier, 2011

### **REFERENCE BOOKS:**

1. Embedded Systems- Architecture, Programming and Design by Rajkamal, 2007, TMH.
2. Advanced UNIX Programming, Richard Stevens
3. Embedded Linux: Hardware, Software and Interfacing – Dr. Craig Hollabaugh

**AM4114PE: SOFT COMPUTING**  
**(PROFESSIONAL ELECTIVE - V)**

|---------------------|---------------------|------------------------|---|---|---------|------------------|-----|-------|
| Course Code         | Category            | Hours/Weak             |   |   | Credits | Max Marks        |     |       |
| AM4114PE            | Mandatory course    | L                      | T | P | C       | CIE              | SEE | Total |
|                     |                     | 3                      | 0 | 0 | 3       | 30               | 70  | 100   |
| Contact Classes:45  | Tutorial classes:15 | Practical classes: Nil |   |   |         | Total Classes:60 |     |       |
| Prerequisites: None |                     |                        |   |   |         |                  |     |       |

**Course Objectives:**

- Familiarize with soft computing concepts
- Introduce and use the idea of fuzzy logic and use of heuristics based on human experience
- Familiarize the Neuro-Fuzzy modeling using Classification and Clustering techniques
- Learn the concepts of Genetic algorithm and its applications
- Acquire the knowledge of Rough Sets.

**Course Outcomes:**

On completion of this course, the students will be able to:

- Identify the difference between Conventional Artificial Intelligence to Computational Intelligence.
- Understand fuzzy logic and reasoning to handle and solve engineering problems
- Apply the Classification and clustering techniques on various applications.
- Understand the advanced neural networks and its applications
- Perform various operations of genetic algorithms, Rough Sets.
- Comprehend various techniques to build model for various applications

**UNIT - I**

**Introduction to Soft Computing:** Evolutionary Computing, "Soft" computing versus "Hard" computing, Soft Computing Methods, Recent Trends in Soft Computing, Characteristics of Soft computing, Applications of Soft Computing Techniques.

**UNIT-II**

**Fuzzy Systems:** Fuzzy Sets, Fuzzy Relations, Fuzzy Logic, Fuzzy Rule-Based Systems

**UNIT-III**

Fuzzy Decision Making, Particle Swarm Optimization

#### **UNIT-IV**

**Genetic Algorithms:** Basic Concepts, Basic Operators for Genetic Algorithms, Crossover and Mutation Properties, Genetic Algorithm Cycle, Fitness Function, Applications of Genetic Algorithm.

#### **UNIT-V**

Rough Sets, Rough Sets, Rule Induction, and Discernibility Matrix, Integration of Soft Computing Techniques

#### **TEXT BOOK:**

1. Soft Computing – Advances and Applications - Jan 2015 by B.K. Tripathy and J. Anuradha –Cengage Learning

#### **REFERENCE BOOKS:**

| Contact Classes:45  | Tutorial classes:15 | Practical classes: Nill |   |   |         | Total Classes:60 |     |       |
| Prerequisites: None |                     |                         |   |   |         |                  |     |       |

**Course Objectives:**

- To introduce the terminology, technology and its applications
- To introduce the concept of M2M (machine to machine) with necessary protocols
- To introduce the Python Scripting Language which is used in many IoT devices
- To introduce the Raspberry PI platform, that is widely used in IoT applications
- To introduce the implementation of web based services on IoT devices

**Course Outcomes:**

- Interpret the impact and challenges posed by IoT networks leading to new architectural models.
- Compare and contrast the deployment of smart objects and the technologies to connect them to network.
- Appraise the role of IoT protocols for efficient network communication.
- Elaborate the need for Data Analytics and Security in IoT.
- Illustrate different sensor technologies for sensing real world entities and identify the applications of IoT in Industry.

**UNIT - I**

Introduction to Internet of Things –Definition and Characteristics of IoT, Physical Design of IoT – IoT Protocols, IoT communication models, IoT Communication APIs IoT enabled Technologies – Wireless Sensor Networks, Cloud Computing, Big data analytics, Communication protocols, Embedded Systems, IoT Levels and Templates Domain Specific IoTs – Home, City, Environment, Energy, Retail, Logistics, Agriculture, Industry, health and Lifestyle

## **UNIT - II**

IoT and M2M – Software defined networks, network function virtualization, difference between SDN and NFV for IoT Basics of IoT System Management with NETCOZF, YANG- NETCONF, YANG, SNMP NETOPEER

## **UNIT - III**

Introduction to Python - Language features of Python, Data types, data structures, Control of flow, functions, modules, packaging, file handling, data/time operations, classes, Exception handling Python packages - JSON, XML, HTTPLib, URLLib, SMTPLib

## **UNIT - IV**

IoT Physical Devices and Endpoints - Introduction to Raspberry PI-Interfaces (serial, SPI, I2C) Programming – Python program with Raspberry PI with focus of interfacing external gadgets, controlling output, reading input from pins.

## **UNIT - V**

IoT Physical Servers and Cloud Offerings – Introduction to Cloud Storage models and communication APIs Webserver – Web server for IoT, Cloud for IoT, Python web application framework Designing a RESTful web API

## **TEXT BOOKS:**

1. Internet of Things - A Hands-on Approach, Arshdeep Bahga and Vijay Madisetti, Universities Press, 2015,  
ISBN: 9788173719547
2. Getting Started with Raspberry Pi, Matt Richardson & Shawn Wallace, O'Reilly (SPD), 2014,  
ISBN:978935023975

**AM4116PE: SOFTWARE PROJECT MANAGEMENT**  
**(PROFESSIONAL ELECTIVE - V)**

| IV-I: CSE(AI&ML)    |                     |                         |   |   |         |                  |     |       |
|---------------------|---------------------|-------------------------|---|---|---------|------------------|-----|-------|

| AM4116PE            | Mandatory course    | L                       | T | P | C       | CIE              | SEE | Total |
|                     |                     | 3                       | 0 | 0 | 3       | 30               | 70  | 100   |
| Contact Classes:45  | Tutorial classes:15 | Practical classes: Nill |   |   |         | Total Classes:60 |     |       |
| Prerequisites: None |                     |                         |   |   |         |                  |     |       |

**Course Objectives:**

- To acquire knowledge on software process management
- To acquire managerial skills for software project development
- To understand software economics

**Course Outcomes:**

- Gain knowledge of software economics, phases in the life cycle of software development, project organization, project control and process instrumentation
- Analyze the major and minor milestones, artifacts and metrics from management and technical perspective
- Design and develop software product using conventional and modern principles of software project management

**UNIT - I**

Software Process Maturity

Software maturity Framework, Principles of Software Process Change, Software Process Assessment, The Initial Process, The Repeatable Process, The Defined Process, The Managed Process, The Optimizing Process.

Process Reference Models

Capability Maturity Model (CMM), CMMI, PCMM, PSP, TSP).

**UNIT - II**

Software Project Management Renaissance Conventional Software Management, Evolution of Software Economics, Improving Software Economics, The old way and the new way.

Life-Cycle Phases and Process artifacts Engineering and Production stages, inception phase, elaboration phase, construction phase, transition phase, artifact sets, management artifacts, engineering artifacts and pragmatic artifacts, model-based software architectures.

### **UNIT - III**

Workflows and Checkpoints of process Software process workflows, Iteration workflows, Major milestones, minor milestones, periodic status assessments.

Process Planning Work breakdown structures, Planning guidelines, cost and schedule estimating process, iteration planning process, Pragmatic planning.

### **UNIT - IV**

Project Organizations Line-of- business organizations, project organizations, evolution of organizations, process automation. Project Control and process instrumentation

The seven-core metrics, management indicators, quality indicators, life-cycle expectations, Pragmatic software metrics, metrics automation.

### **UNIT - V**

CCPDS-R Case Study and Future Software Project Management Practices

Modern Project Profiles, Next-Generation software Economics, Modern Process Transitions.

### **TEXT BOOKS:**

1. Managing the Software Process, Watts S. Humphrey, Pearson Education
2. Software Project Management, Walker Royce, Pearson Education

### **REFERENCE BOOKS:**

1. An Introduction to the Team Software Process, Watts S. Humphrey, Pearson Education, 2000
2. Process Improvement essentials, James R. Persse, O'Reilly, 2006
3. Software Project Management, Bob Hughes & Mike Cotterell, fourth edition, TMH, 2006
4. Applied Software Project Management, Andrew Stellman & Jennifer Greene, O'Reilly, 2006.
5. Head First PMP, Jennifer Greene & Andrew Stellman, O'Reilly, 2007
6. Software Engineering Project Management, Richard H. Thayer & Edward Yourdon, 2<sup>nd</sup> edition, Wiley India, 2004.
7. Agile Project Management, Jim Highsmith, Pearson education, 2004.

**CS4121OE: PYTHON PROGRAMMING**  
(Open Elective- II)

| IV-I: CSE(AI&ML)    |                     |                         |   |   |         |                  |     |       |
|---------------------|---------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code         | Category            | Hours/Weak              |   |   | Credits | Max Marks        |     |       |

|                     |                     | 3                       | 0 | 0 | 3       | 30               | 70  | 100   |
| Contact Classes:45  | Tutorial classes:15 | Practical classes: Nill |   |   |         | Total Classes:60 |     |       |
| Prerequisites: None |                     |                         |   |   |         |                  |     |       |

**Course Objectives:**

- To be able to introduce core programming basics and program design with functions using Python programming language.
- To understand arrange of Object-Oriented Programming, as well as in-depth data and information processing techniques.
- To understand the high- performance programs designed to strengthen the practical expertise.

**COURSE OUTCOMES:**

- Able to write programs using classes and objects
- Able to develop GUI

**UNIT-I**

Introduction to Python, Installing Python. How a Program Works, Using Python, Program Development Cycle, Input, Processing, and Output, Displaying Output with the Print Function, Comments, Variables, Reading Input from the Keyboard, Performing Calculations, Operators. Type conversions, Expressions, more about Data Output. Decision Structures and Boolean Logic: if, if-else, if-elif-else Statements, Nested Decision Structures, Comparing Strings, Logical Operators, Boolean Variables. Repetition Structures: Introduction, while loop, for loop, Calculating a Running Total, Input Validation Loops, Nested Loops.

Data types and Expressions: Strings, Assignment and Comments, Numeric Data Types and Character Sets, Expressions, Functions and Modules.

**UNIT-II**

Control Statements: Definite Iteration, Formatting Text for Output, Selection, Conditional Iteration.

File and Exceptions: Introduction to File Input and Output, Using Loops to Process Files, Processing Records, Exceptions.

Functions: Introduction, Defining and Calling a Void Function, designing a Program to Use Functions, Local Variables, Passing Arguments to Functions, Global Variables and Global Constants, Value-Returning Functions-Generating Random Numbers, The math Module, Storing Functions in Modules.

### **UNIT-III**

Strings and Text Files: Accessing Characters and Sub strings in a String, Strings and Number System, String Methods, Basic String Operations, String Slicing, Testing, Searching, and Manipulating Strings. Text Files, Data Encryption, Lists, Introduction to Lists, Listslicing, Finding Items in Lists with the in Operator, List Methods and Useful Built-in Functions, Copying Lists, Processing Lists, Two-Dimensional Lists, Tuples Sequences, Tuples. Dictionaries and Sets: Dictionaries, Sets, Serializing Objects. Recursion: Introduction, Problem Solving with Recursion, Examples of Recursive Algorithms.

### **UNIT-IV**

Design with Classes: Classes and Objects, Classes and Functions, Classes and Methods, Working with Instances, Inheritance and Polymorphism. Object-Oriented Programming: Procedural and Object-Oriented Programming, Classes, techniques for Designing Classes.

### **UNIT-V**

Graphical User Interfaces: Behavior of terminal based programs and GUI-based programs, Coding simple GUI- based programs, other useful GUI resources. GUI Programming: Graphical User Interfaces, Using the tkinter Module, Display text with Label Widgets, Organizing Widgets with Frames, Button Widgets and Info Dialog Boxes, Getting Input with Entry Widget, Using Labels as Output Fields, Radio Buttons, Check Buttons.

Simple Graphics and Image Processing: Overview of Turtle Graphics, Two dimensional Shapes, Colors and RGB System, Image Processing.

### **TEXTBOOKS:**

- Kenneth A. Lambert, The Fundamentals of Python: First Programs, 2011, Cengage Learning.
- Think Python First Edition, by Allen B. Downey, Orielly publishing

### **REFERENCEBOOKS:**

- Introduction to Computation and Programming Using Python. John V. Guttag, The MIT Press.
- James Payne, Beginning Python using Python 2.6 and Python3, Wrox publishing
- Paul Gries, Practical Programming: An Introduction to Computer Science using Python3, The Pragmatic Bookshelf, 2<sup>nd</sup> edition (4 Oct. 2013)
- Charles Dierach, Introduction to Computer Science using Python

**CS4122OE: R PROGRAMMING**  
(Open Elective- II)

| IV-I:CSE(AI&ML)     |                     |                         |   |   |         |                  |     |       |
|---------------------|---------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code         | Category            | Hours/Weak              |   |   | Credits | Max Marks        |     |       |
| CS4122OE            | Mandatory course    | L                       | T | P | C       | CIE              | SEE | Total |
|                     |                     | 3                       | 0 | 0 | 3       | 30               | 70  | 100   |
| Contact Classes:45  | Tutorial classes:15 | Practical classes: Nill |   |   |         | Total Classes:60 |     |       |
| Prerequisites: None |                     |                         |   |   |         |                  |     |       |

**Course Objectives:**

- Understanding and being able to use basic programming concepts
- Automate data analysis
- Working collaboratively and openly on code
- Knowing how to generate dynamic documents
- Being able to use a continuous test-driven development approach

**Course Outcomes:**

- Be able to use and program in the programming language R
- Be able to use R to solve statistical problems
- Be able to implement and describe Monte Carlo the technology
- Be able to minimize and maximize functions using R

**UNIT-I**

Introduction: Overview of R, R data types and objects, reading and writing data, sub setting R Objects, Essentials of the R Language, Installing R, Running R, Packages in R, Calculations, Complex numbers in R, Rounding, Arithmetic, Modulo and integer quotients, Variable names and assignment, Operators, Integers, Factors, Logical operations

**UNIT- II**

Control structures, functions, scoping rules, dates and times, Introduction to Functions, preview of Some Important R Data Structures, Vectors, Character Strings, Matrices, Lists, Data Frames, Classes

Vectors: Generating sequences, Vectors and subscripts, Extracting elements of a vector using subscripts, Working with logical subscripts, Scalars, Vectors, Arrays, and Matrices, Adding and Deleting Vector Elements, Obtaining the Length of a Vector, Matrices and Arrays as Vectors Vector Arithmetic and Logical Operations, Vector Indexing, Common Vector Operations

**UNIT-III**

Lists: Creating Lists, General List Operations, List Indexing Adding and Deleting List Elements, Getting the Size of a List, Extended Example: Text Concordance Accessing List Components and Values Applying Functions to Lists, DATA FRAMES, Creating Data Frames, Accessing Data Frames, Other Matrix- Like Operations

**UNIT-IV**

FACTORS AND TABLES, Factors and Levels, Common Functions Used with Factors, Working with Tables, Matrix/ Array- Like Operations on Tables, Extracting a Subtable, Finding the Largest Cells in a Table, Math Functions, Calculating a Probability, Cumulative Sums and Products, Minima and Maxima, Calculus, Functions for Statistical Distributions

**UNIT-V**

OBJECT-ORIENTED PROGRAMMING: S Classes, S Generic Functions, Writing S Classes, Using Inheritance, S Classes, Writing S Classes, Implementing a Generic Function on an S Class, visualization, Simulation, code profiling, Statistical Analysis with R, data manipulation

**TEXTBOOKS:**

- R Programming for Data Science by Roger D. Peng
- The Art of R Programming by Prashanth singh, Vivek Mourya, Cengage Learning India.

**CS4123OE: JAVA PROGRAMMING**  
(Open Elective- II)

| IV-I: CSE(AI&ML)    |                     |                         |   |   |         |                  |     |       |
|---------------------|---------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code         | Category            | Hours/Weak              |   |   | Credits | Max Marks        |     |       |
| CS4123OE            | Mandatory course    | L                       | T | P | C       | CIE              | SEE | Total |
|                     |                     | 3                       | 0 | 0 | 3       | 30               | 70  | 100   |
| Contact Classes:45  | Tutorial classes:15 | Practical classes: Nill |   |   |         | Total Classes:60 |     |       |
| Prerequisites: None |                     |                         |   |   |         |                  |     |       |

**Course Objectives:**

- To introduce the object-oriented programming concepts.
- To understand object-oriented programming concepts, and apply them in solving problems.
- To introduce the principles of inheritance and polymorphism; and demonstrate how they relate to the design of abstract classes
- To introduce the implementation of packages and interfaces
- To introduce the concepts of exception handling and multithreading.
- To introduce the design of Graphical User Interface using applets and swing controls.

**Course Outcomes:**

- Able to solve real world problems using OOP techniques.
- Able to understand the use of abstract classes.
- Able to solve problems using java collection frame work and I/o classes.
- Able to develop multithreaded applications with synchronization.
- Able to develop applets for web applications.
- Able to design GUI based applications

**UNIT-I**

Object-Oriented Thinking- Away of viewing world – Agents and Communities, messages and methods, Responsibilities, Classes and Instances, Class Hierarchies- Inheritance, Method binding, Overriding and Exceptions, Summary of Object-Oriented concepts. Java buzzwords, An Overview of Java, Datatypes, Variables and Arrays, operators, expressions, control statements, Introducing classes, Methods and Classes, String handling.

Inheritance-Inheritance concept, Inheritance basics, Member access, Constructors, Creating Multilevel hierarchy, super uses, using final with inheritance, Polymorphism- adhoc polymorphism, pure polymorphism, method overriding, abstract classes, Object class, forms of inheritance- specialization, specification, construction, extension, limitation, combination, benefits of inheritance, costs of inheritance.

## **UNIT-II**

Packages- Defining a Package, CLASSPATH, Access protection, importing packages.

Interfaces- defining an interface, implementing interfaces, Nested interfaces, applying interfaces, variables in interfaces and extending interfaces.

Stream based I/O (java.io) – The Stream classes-Byte streams and Character streams, Readingconsole Input and Writing Console Output, File class, Reading and writing Files, Random access fileoperations, The Console class, Serialization, Enumerations, autoboxing, generics.

## **UNIT-III**

Exception handling-Fundamentals of exception handling, Exception types, Termination or resumptive models, Un caught exceptions, using try and catch, multiple catch clauses, nested try statements, throw, throws and finally, built- in exceptions, creating own exception sub classes.

Multithreading- Differences between thread- based multi tasking and process-based multitasking, Java thread model, creating threads, thread priorities, synchronizing threads, inter thread communication.

## **UNIT-IV**

The Collections Framework (java.util)- Collections overview, Collection Interfaces, The Collection classes- Array List, Linked List, Hash Set, Tree Set, Priority Queue, Array Deque. Accessing a Collection via an Iterator, Using an Iterator, The For-Each alternative, Map Interfaces and Classes, Comparators, Collection algorithms, Arrays, The Legacy Classes and Interfaces- Dictionary, Hashtable, Properties, Stack, Vector More Utility classes, String Tokenizer, BitSet, Date, Calendar, Random, Formatter, Scanner

## **UNIT-V**

GUI Programming with Swing –Introduction, limitations of AWT, MVC architecture, components, containers. Understanding Layout Managers, Flow Layout, Border Layout, Grid Layout, Card Layout, GridBag Layout.

Event Handling-The Delegation event model-Events, Event sources, Event Listeners, Eventclasses, Handling mouse and keyboard events, Adapter classes, Inner classes, Anonymous Inner classes.

A Simple Swing Application, Applets–Applets and HTML, Security Issues, Applets and Applications, passing parameters to applets. Creating a Swing Applet, Painting in Swing, A Paint example, Exploring Swing Controls- JLabel and Image Icon, JText Field, The Swing Buttons- JButton, JToggle Button, JCheckBox, JRadioButton, JTabbedPane, JScroll Pane, JList, JComboBox, Swing Menus, Dialogs.

## **TEXT BOOKS:**

- Java The complete reference, 9<sup>th</sup> edition, HerbertSchildt, McGrawHill Education(India) Pvt.Ltd.
- Understanding Object-Oriented Programming with Java,updated edition, T. Budd, Pearson Education.

**REFERENCE BOOKS:**

- An Introduction to programming and OO design using Java, J. Nino and F.A. Hosch, John Wiley & sons
- Introduction to Java programming, Y. Daniel Liang, Pearson Education.
- Object Oriented Programming through Java, P. Radha Krishna, University Press.
- Programming in Java, S. Malhotra, S. Chudhary, 2<sup>nd</sup> edition, Oxford Univ. Press.
- Java Programming and Object-oriented Application Development, R.A. Johnson, Cengage Learning.

**EE4121OE: RENEWABLE ENERGY SOURCES**  
(Open Elective- II)

| IV-I:CSE(AI&ML)     |                     |                         |   |   |         |                  |     |       |
|---------------------|---------------------|-------------------------|---|---|---------|------------------|-----|-------|
| Course Code         | Category            | Hours/Weak              |   |   | Credits | Max Marks        |     |       |
| CS4123OE            | Mandatory course    | L                       | T | P | C       | CIE              | SEE | Total |
|                     |                     | 3                       | 0 | 0 | 3       | 30               | 70  | 100   |
| Contact Classes:45  | Tutorial classes:15 | Practical classes: Nill |   |   |         | Total Classes:60 |     |       |
| Prerequisites: None |                     |                         |   |   |         |                  |     |       |

**Course Objectives:**

- To recognize the awareness of energy conservation in students.
- To identify the use of renewable energy sources for electrical power generation.
- To collect different energy storage methods.
- To detect about environmental effects of energy conversion.

**Course Outcomes:** Attheend of the course the student will be able to:

- Understand the principles of wind power and solar photo voltaic power generation, fuel cells.
- Assess the cost of generation for conventional and renewable energy plants.
- Design suitable power controller for wind and solar applications.
- Analyze the issues involved in the integration of renewable energy sources to the grid.

**UNIT-I**

Introduction: Renewable Sources of Energy- Grid- Supplied Electricity-Distributed Generation- Renewable Energy Economics- Calculation of Electricity Generation Costs- Demand side Management Options -Supply side Management Options-Modern Electronic Controls of Power Systems.

Wind PowerPlants: Appropriate Location- Evaluation of Wind Intensity-To pography -Purpose of the Energy Generated - General Classification of Wind Turbines-Rotor Turbines- Multiple- Blade Turbines Drag Turbines -Lifting Turbines- Generators and Speed Control used in Wind Power Energy Analysis of Small Generating Systems.

**UNIT-II**

Photovoltaic Power Plants:Solar Energy-Generation of Electricity by Photovoltaic Effect -Dependence of a PV Cell Characteristic on Temperature-Solar cell Output Characteristics-Equivalent Models and Parameters for Photo voltaic Panels-Photo voltaic Systems- Applications of Photo voltaic Solar Energy-Economical Analysis of Solar Energy.

Fuel Cells: The Fuel Cell-Low and High Temperature Fuel Cells- Commercial and Manufacturing Issues Constructional Features of Proton Exchange-Membrane

Fuel Cells –Reformers-Electro-lyzer Systems and Related Precautions-Advantages and Disadvantages of Fuel Cells-Fuel Cell Equivalent Circuit- Practical Determination of the Equivalent Model Parameters- Aspects of Hydrogen as Fuel.

### **UNIT-III**

Induction Generators

Principles of Operation- Representation of Steady-State Operation- Power and Losses Generated- Self- Excited Induction Generator- Magnetizing Curves and Self-Excitation Mathematical Description of the Self-Excitation Process-Inter connected and Stand-alone operation -Speed and Voltage Control –Economical Aspects.

### **UNIT-IV**

Storage Systems: Energy Storage Parameters- Lead- Acid Batteries- Ultra Capacitors- Fly wheels- Super conducting Magnetic Storage System- Pumped Hydro electric Energy Storage - Compressed Air Energy Storage - Storage Heat - Energy Storage as an Economic Resource.

### **UNIT-V**

Integration of Alternative Sources of Energy: Principles of Power Injection- Instantaneous Active and Reactive Power Control Approach Integration of Multiple Renewable Energy Sources- Islanding and Inter connection Control-DG Control and Power Injection.

Inter connection of Alternative Energy Sources with the Grid: Inter connection Technologies - Standards and Codes for Inter connection – Inter connection Considerations –Inter connection Examples for Alternative Energy Sources.

### **TEXT BOOKS:**

- Felix A. Farret, M. Godoy Simoes, “Integration of Alternative Sources of Energy”, John Wiley & Sons, 2006.

**Course Objectives:**

- To introduce the basic concepts of reliability, various models of reliability
- To analyze reliability of various systems
- To introduce techniques off requencey and duration for reliability evaluation of repairable systems

**Course Outcomes:** After completion of this course, the student will be able to

- Model various systems applying reliability networks
- Evaluate the reliability of simple and complex systems
- Estimate the limiting state probabilities of repairable systems
- Apply various mathematical models for evaluating reliability of irreparable systems

**UNIT-I**

Basic Probability Theory: Elements of probability, probability distributions, Random variables, Densityand Distribution functions- Mathematical expected – variance and standarddeviation

Binomial Distribution: Concepts, properties, engineering applications.

**UNIT-II**

Network Modeling and Evaluation of Simple Systems: Basic concepts- Evaluation of network Reliability/ Unreliability- Series systems, Parallel systems- Series-Parallel systems- Partially redundant systems- Examples.

Network Modeling and Evaluation of Complex Systems

Conditional probability method- tie set, Cut-set approach- Event tree and reduced event tree methods-Relationships between tie and cut-sets-Examples.

**UNIT-III**

Probability Distributions In Reliability Evaluation: Distribution concepts, Terminology ofdistributions, General reliability functions, Evaluation of the reliability functions, shape of reliability functions– Poisson distribution–normal

distribution, exponential distribution, Weibull distribution.

Network Reliability Evaluation Using Probability Distributions: Reliability Evaluation of Series systems, Parallel systems – Partially redundant systems–determination of reliability measure-MTTF for series and parallel systems–Examples.

#### **UNIT-IV**

Discrete Markov Chains: Basic concepts- Stochastic transitional probability matrix- time dependent probability evaluation- Limiting State Probability evaluation- Absorbing states –Application.

Continuous Markov Processes: Modeling concepts- State space diagrams- Unreliability evaluation of single and two component repairable systems

#### **UNIT-V**

Frequency and Duration Techniques: Frequency and duration concepts, application to multi state problems, Frequency balance approach.

Approximate System Reliability Evaluation: Series systems – Parallel systems- Network reduction techniques- Cut set approach- Common mode failures modeling and evaluation techniques-Examples.

**Course Objectives:**

- To understand the concept of computer communication.
- To learn about the networking concept layered protocols.
- To understand various communications concepts.
- To get the knowledge of various networking equipment.

**Course Outcomes:**

- The student can get the knowledge of networking of computers, data transmission between computers.
- Will have the exposure about the various communication concepts.
- Will get awareness about the structure and equipment of computer network structures.

**UNIT-I**

Overview of Computer Communications and Networking: Introduction to Computer Communications and Networking, Introduction to Computer Network, Types of Computer Networks, Network Addressing, Routing, Reliability, Interoperability and Security, Network Standards, The Telephone System and Data Communications.

**UNIT-II**

Essential Terms and Concepts: Computer Applications and application protocols, Computer Communications and Networking models, Communication Service Methods and data transmission modes, analog and Digital Communications ,Speed and capacity of a Communication Channel, Multiplexing and switching, Network architecture and the OSI reference model.

**UNIT-III**

Analog and Digital Communication Concepts:Representing data as analog signals, representing data as digital signals, data rate and bandwidth reduction, Digital Carrier Systems.

**UNIT-IV**

Physical and data link layer Concepts: The Physical and Electrical Characteristics of wire, Copper media, fiber optic media, wireless Communications. Introduction to data link Layer, the logical link control and medium access control sub-layers.

**UNIT-V**

Network Hardware Components: Introduction to Connectors, Transreceivers and media convertors, repeaters, network interface cards and PC cards, bridges, switches, switches Vs Routers.

**TEXT BOOKS:**

- Computer Communications and Networking Technologies, Michel A. Gallo and William H. Hancock, Thomson Brooks/Cole.
- Data Communications and Networking– Behrouz A. Forouzan, Fourth Edition MC GRAW HILL EDUCATION, 2006.

| Prerequisites:   None |                        |                        |   |   |         |                  |     |       |

**Course Objectives:**

- To understand the philosophies of various Manufacturing process.

**Course Outcomes:**

- At the end of the course, for given product, one should be able to identify the manufacturing process.

**UNIT-I**

Casting: Steps involved in making a casting–Advantage of casting and its applications;

Patterns–Pattern making, Types, Materials used for patterns, pattern allowances and their construction; Properties of mouldings and.

Methods of Melting- Crucible melting and cupola operation– Defects in castings;

Casting processes – Types – Sand moulding, Centrifugal casting, die-casting, Investment casting, shell moulding; Principles of Gating – Requirements – Types of gates, Design of gating systems –Riser– Function, types of Riser and Riser design.

**UNIT-II**

Welding: Classification – Types of welds and welded joints; Gas welding - Types, oxy-fuel gas cutting. Arc welding, forge welding, submerge arc welding, Resistance welding, The remote welding.

Inert Gas Welding - TIG Welding, MIG welding, explosive welding, Laser Welding; Soldering and Brazing; Heat affected zone in welding. Welding defects –causes and remedies; destructive and non-destructive testing of welds.

**UNIT-III**

Hot working, cold working, strain hardening, recovery, recrystallisation, and grain growth. Stamping, forming, and other

cold working processes. Blanking and piercing– Bending and forming – Drawing and its types – wire drawing and Tube drawing – coining – Hot and cold spinning. Types of presses and press tools. Forces and power requirement in the above operations.

#### **UNIT-IV**

Extrusion of Metals: Basic extrusion process and its characteristics. Hot extrusion and cold extrusion-Forward extrusion and backward extrusion– Impact extrusion–Extruding equipment –Tube extrusion and pipe making, Hydro static extrusion. Forces in extrusion.

#### **UNIT-V**

Forging Processes: Forging operations and principles – Tools – Forging methods – Smith forging, Drop Forging – Roll forging – Forging hammers: Rotary forging – forging defects – cold forging, swaging, Forces in forging operations.

#### **TEXT BOOKS:**

- Manufacturing Technology / P.N.Rao / McGraw Hill
- Manufacturing Engineering and Technology / Kalpakjian / Pearson.

#### **REFERENCE BOOKS:**

### **UNIT-I**

Introduction: The concept of TQM, Quality and Business performance, attitude, and involvement of top management, communication, culture and management systems. Management of Process Quality: Definition of quality, Quality Control, a brief history, Product Inspection vs. Process Control, Statistical Quality Control, Control Charts and Acceptance Sampling.

### **UNIT-II**

Customer Focus and Satisfaction: Process vs. Customer, internal customer conflict, quality focus, Customer Satisfaction, role of Marketing and Sales, Buyer– Supplier relationships.

Bench Marking: Evolution of Bench Marking, meaning of bench marking, benefits of benchmarking, the bench marking procedure, pit falls of bench marketing.

### **UNIT-III**

Organizing for TQM: The systems approach, organizing for quality implementation, making the transition from a traditional to a TQM organization, Quality Circles, seven Tools of TQM: Stratification, check sheet, Scatter diagram, Ishikawa diagram, paneto diagram, Kepner &Tregoe Methodology.

### **UNIT-IV**

The Cost of Quality: Definition of the Cost of Quality, Quality Costs, Measuring Quality Costs, use of Quality Cost information, Accounting Systems and Quality Management.

### **UNIT-V**

ISO9000: Universal Standards of Quality: ISO around the world, The ISO9000 ANSI/ASQCQ- 90. Series Standards, benefits of ISO9000 certification, the third party audit, Documentation ISO9000 and services, the cost of certification implementing the system.

| ME4123OE              | Open<br>Elective- II   | L                      | T | P | C       | CIE              | SEE | Total |
|                       |                        | 3                      | 0 | 0 | 3       | 30               | 70  | 100   |
| Contact<br>Classes:45 | Tutorial<br>classes:15 | Practical classes: Nil |   |   |         | Total Classes:60 |     |       |
| Prerequisites:   None |                        |                        |   |   |         |                  |     |       |

**Course Objectives:**

- To acquaint the student with the conventional energy sources and their utilization. To understand the importance of heat recovery and energy conservation methods and energy audit.

**Course Outcomes:**

- Students would have a good knowledge about conventional energy sources and their audit. Ability to apply the fundamentals of energy conservation and management.

**UNIT-I**

Introduction: Global& Indian Energy Scenario-Classification of Energy sources- Energy needs of growing economy-Energy sector reform, Energy and Environment: Global Environmental Concerns, Basics of Energy and its various forms.

**UNIT-II**

Energy Audit: Types of energy audit, Energy management(audit) approach understand in genenergy costs, Benchmarking, Energy performance, Matching energy use to requirement, Maximizing system efficiencies, Optimizing the input energy requirements, Fuel and energy substitution, Energy audit instruments.

Material and Energy balance: Facility as an energy system, Methods for preparing process flow, Material and energy balance diagrams.

**UNIT-III**

Energy Action Planning, Financial Management: Financial analysis techniques- Risk and sensitivity analysis- Financing options, Energy performance contracts and role of ESCOs- Energy Monitoring and Targeting: Elements of monitoring & targeting, Data and information- analysis, Techniques- energy consumption, Production, Cumulative sum of differences (CUSUM).

#### **UNIT-IV**

Building Envelope – principles of analysis – Envelope performance - Envelope analysis of Existing and new buildings – Building standards for new and Existing constructions. HVAC Systems types – Energy conservation opportunities – cooling equipment – Domestic hot water Estimating HVAC Energy consumption.

#### **UNIT-V**

Principles of Electric Energy Management, Energy Management control systems – Energy systems maintenance. Energy management in water and waste water treatment – solid waste treatment- air pollution control systems .Energy Management in Boilers and Fired systems–Steam and condensate systems– cogeneration– Waste Heat recovery. Energy Management in Process Industries, Energy Security, Codes, Standards, Electricity Act, Energy Conservation Act.

|                       | Elective- II           | 3                       | 0 | 0 | 3       | 30               | 70  | 100   |
| Contact<br>Classes:45 | Tutorial<br>classes:15 | Practical classes: Nill |   |   |         | Total Classes:60 |     |       |
| Prerequisites:   None |                        |                         |   |   |         |                  |     |       |

**Course Objectives:** The objectives of the course are to

- Define and Classify Environmental Impacts and the terminology
- Understands the environmental Impact assessment procedure
- Explain the EIA methodology
- List and describe environmental audits

**Course Outcomes:** At the end of the course the student will be able to

- Identify the environmental attributes to be considered for the EIA study
- Formulate objectives of the EIA studies
- Identify the methodology to prepare rapid EIA
- Prepare EIA reports and environmental management plans

### UNIT-I

Introduction: The Need for EIA, Indian Policies Requiring EIA, The EIA Cycle and Procedures, Screening, Scoping, Baseline Data, Impact Prediction, Assessment of Alternatives, Delineation of Mitigation Measure and EIA Report, Public Hearing, Decision Making, Monitoring the Clearance Conditions, Components of EIA, Roles in the EIA Process. Government of India Ministry of Environment and Forest Notification (2000), List of projects requiring Environmental clearance, Application form, Composition of Expert Committee, Ecological sensitive places, International agreements.

### UNIT-II

EIA Methodologies: Environmental attributes-Criteria for the selection of EIA methodology, impact identification, impact measurement, impact interpretation & Evaluation, impact communication, Methods- Adhoc methods, Check lists methods, Matrices methods, Networks methods, Overlays methods. EIA review-Baseline Conditions -Construction Stage Impacts, post project impacts.

### UNIT-III

Environmental Management Plan: EMP preparation, Monitoring Environmental Management Plan, Identification of Significant or Unacceptable Impacts Requiring Mitigation, Mitigation Plans and Relief & Rehabilitation, Stipulating the Conditions, Monitoring Methods, Pre-Appraisal and Appraisal.

#### **UNIT-IV**

Environmental Legislation and Life cycle Assessment: Environmental laws and protection acts, Constitutional provisions-powers and functions of Central and State government, The Environment (Protection) Act 1986, The Water Act 1974, The Air act 1981, Wild Life act 1972, Guidelines for control of noise, loss of biodiversity, solid and Hazardous waste management rules. Life cycle assessment: Life cycle analysis, Methodology, Management, Flow of materials-cost criteria case studies.

#### **UNIT-V**

Case Studies: Preparation of EIA for developmental projects- Factors to be considered in making assessment decisions, Water Resources Project, Pharmaceutical industry, thermal plant, Nuclear fuel complex, Highway project, Sewage treatment plant, Municipal Solid waste processing plant, Airports.

|                       |                        | 3                      | 0 | 0 | 3       | 30               | 70  | 100   |
| Contact<br>Classes:45 | Tutorial<br>classes:15 | Practical classes: Nil |   |   |         | Total Classes:60 |     |       |
| Prerequisites:   None |                        |                        |   |   |         |                  |     |       |

**Course Objectives:**

- To present the information of waste water generation from various industries
- To inform about the conventional treatment processes for specific industrial
- Waste waters
- To explain about the new developments in industrial waste water treatment
- technologies

**Course Outcomes:**At the end of the course, the student should be able to:

- Identify the characteristics of industrial waste waters
- Describe pollution effects of disposal of industrial effluent
- Identify and design treatment options for industrial waste water
- Formulate environmental management plan

**UNIT-I**

Introduction: Waste water Characteristics, Standards of Disposal, Treatment Objective and Strategies, Layouts of Primary, Secondary and Advanced Treatment Units.

**UNIT-II**

Design of Preliminary and Primary Treatment Operations: Screens, Grit Chambers, Skimming Tank, Primary and Secondary Sedimentation Tanks.

**UNIT-III**

Biological Treatment Processes: Types, Kinetics of Plug Flow and Completely Mixed Systems. Attached Growth Processes: Trickling Filters (Standard Rate, High Rate), Biofilters, Practices, Features and Design, Operational Difficulties and Remedial Measures, Rotating Biological Contactors. Suspended Growth Processes:

**UNIT-IV**

Activated Sludge Process, Modifications and Design Equations, Process Design Criteria, Oxygen and Nutrient Requirements –Classification and Design of Oxidation Ponds, Lagoons.

## **UNIT-V**

Sludge Treatment and Disposal: Sludge Thickening, Aerobic and Anaerobic Sludge Digestion Processes, Design of Digester Tank, Sludge Dewatering, Ultimate Disposal, Sludge Drying Beds, Other Methods of Sludge Treatment.

| Prerequisites:       |                       |                       |   |   |         |                  |     |       |

### Course Objectives:

1. To implement various neural networks
2. To become familiar with various tools used in deep learning.

### Course Outcomes:

1. Students will be able solve problems using various types of neural networks.

### Exercises

1. Implement Image classification.
2. Implement chat bot.
3. Implement neural networks to identify dog, cat.
4. Implement traffic sign recognition.
5. Implement predicts sequential data system.

#### **UNIT – I**

Introduction to Intellectual property: Introduction, types of intellectual property, international organizations, agencies and treaties, importance of intellectual property rights.

#### **UNIT – II**

Trade Marks: Purpose and function of trademarks, acquisition of trade mark rights, protectable matter, selecting, and evaluating trade mark, trade mark registration processes.

#### **UNIT – III**

Law of copy rights: Fundamental of copy right law, originality of material, rights of reproduction, rights to perform the work publicly, copy right ownership issues, copy right registration, notice of copy right, international copy right law.

Law of patents: Foundation of patent law, patent searching process, ownership rights and transfer

#### **UNIT – IV**

Trade Secrets: Trade secrete law, determination of trade secrete status, liability for misappropriations of trade secrets, protection for submission, trade secrete litigation.

Unfair competition: Misappropriation right of publicity, false advertising.

#### **UNIT – V**

New development of intellectual property: new developments in trade mark law; copy right law, patent law, intellectual property audits.

International overview on intellectual property, international – trade mark law, copy right law, international patent law, and international development in trade secrets law.

#### **TEXT & REFERENCE BOOKS:**

1. Intellectual property right, Deborah. E. Bouchoux, Cengage learning.
2. Intellectual property right – Unleashing the knowledge economy, prabuddha ganguli, TataMcGraw Hill Publishing company ltd

## SM4201MS: ORGANIZATIONAL BEHAVIOUR

### IV-II: CSE(AI&ML)

| Contact Classes:45    | Tutorial classes:15 | Practical classes: Nill |   |   |         | Total Classes:60 |     |       |
| Prerequisites:   None |                     |                         |   |   |         |                  |     |       |

### Course Objectives:

The objective of the course is to provide the students with the conceptual framework and the theories underlying Organizational Behaviour.

### UNIT-I:

Introduction to OB- Definition, Nature and Scope- Environmental and organizational context- Impact of IT, globalization, Diversity, Ethics, culture, reward systems and organizational design on Organizational Behaviour. Cognitive Processes- I: Perception and Attribution: Nature and importance of Perception- Perceptual selectivity and organization- Social perception- Attribution Theories- Locus of control- Attribution Errors- Impression Management.

### UNIT-II:

Cognitive Processes-II: Personality and Attitudes- Personality as a continuum- Meaning of personality-Johari Window and Transactional Analysis- Nature and Dimension of Attitudes- Job satisfaction and organizational commitment- Motivational needs and processes- Work-Motivation Approaches Theories of Motivation- Motivation across cultures - Positive organizational behaviour: Optimism - Emotional intelligence- Self-Efficacy.

### UNIT-III:

Dynamics of OB-I: Communication - types - interactive communication in organizations - barriers to communication and strategies to improve the follow of communication - Decision Making: Participative decision-making techniques - creativity and group decision making. Dynamics of OB -II Stress and Conflict: Meaning and types of stress -Meaning and types of conflict - Effect of stress and intra-individual conflict-strategies to cope with stress and conflict.

### UNIT-IV:

Dynamics of OB -III Power and Politics: Meaning and types of power - empowerment - Groups Vs.Teams - Nature of groups - dynamics of informal groups - dysfunctions of groups and teams - teams in modern work place.

**UNIT-V:**

Leading High performance: Job design and Goal setting for High performance- Quality of Work Life-Sociotechnical Design and High-performance work practices- Behavioural performance management: reinforcement and punishment as principles of Learning- Process of Behavioural modification- Leadership theories-Styles, Activities and skills of Great leaders.

| Prerequisites: A course on “Computer Programming and Data Structures”<br>A course on “Discrete Structures and Graph Theory” |                          |                        |   |   |         |                  |     |       |

**Prerequisites:**

1. A course on “Computer Programming and Data Structures”
2. A course on “Discrete Structures and Graph Theory”

**Course Objectives:**

- Introduces to theory of computational complexity classes
- Discuss about algorithmic techniques and application of these techniques to problems.
- Introduce to randomized algorithms and discuss how effective they are in reducing time and space complexity.
- Discuss about Graph based algorithms and approximation algorithms
- Discuss about search trees

**Course Outcomes:**

- Ability to classify decision problems into appropriate complexity classes
- Ability to specify what it means to reduce one problem to another, and construct reductions for simple examples.
- Ability to classify optimization problems into appropriate approximation complexity classes
- Ability to choose appropriate data structure for the given problem
- Ability to choose and apply appropriate design method for the given problem

**UNIT-I**

Computational Complexity: Polynomial time and its justification, Nontrivial examples of polynomial- time algorithms, the concept of reduction (reducibility), Class P Class NP and NP- Completeness, The P versus NP problem and why it's hard

## **UNIT-II**

Algorithmic paradigms: Dynamic Programming– Longest common subsequence, matrix chain multiplication, knapsack problem, Greedy – 0-1 knapsack, fractional knapsack, scheduling problem, Huffman coding, MST, Branch-and-bound – travelling sales person problem, 0/1 knapsack problem, Divide and Conquer– Mergesort, binarysearch, quicksort.

## **UNIT-III**

Randomized Algorithms: Finger Printing, Pattern Matching, Graph Problems, Algebraic Methods, Probabilistic Primality Testing, De-Randomization Advanced Algorithms.

## **UNIT-IV**

Graph Algorithms: Shortest paths, Flow networks, Spanning Trees; Approximation algorithms, Randomized algorithms. Approximation algorithms: Polynomial Time Approximation Schemes.

## **UNIT-V**

Advanced Data Structures and applications: Decision Trees and Circuits, B-Trees, AVL Trees, Red and Black trees, Dictionaries and tries, Maps, Binomial Heaps, Fibonacci Heaps, Disjoint sets, Union by Rank and Path Compression

## **TEXT BOOKS:**

1. T.Cormen, C.Leiserson, R.Rivest and C.Stein, Introduction to Algorithms, Third Edition, McGraw-Hill, 2009.
2. R.Motwani and P.Raghavan, Randomized Algorithms, Cambridge University Press, 1995.
3. J.J.McConnell, Analysis of Algorithms: An Active Learning Approach, Jones & Bartlett Publishers, 2001.
4. D.E.Knuth, Art of Computer Programming, Volume 3, Sorting and Searching, Second Edition, Addison-Wesley Professional, 1998.
5. S.Dasgupta, C. H. Papadimitriou and U.V.Vazirani, Algorithms, McGraw-Hill, 2008.

**Course Objectives**

- This course provides an insight into Distributed systems.
- Topics include- Peer to Peer Systems, Transactions and Concurrency control, Security and Distributed shared memory

**Course Outcomes**

- Ability to understand Transactions and Concurrency control.
- Ability to understand Security issues.
- Understanding Distributed shared memory.
- Ability to design distributed systems for basic level applications.

**UNIT-I**

Characterization of Distributed Systems-Introduction, Examples of Distributed systems, Resource sharing and web, challenges, System models -Introduction, Architectural and Fundamental models, Networking and Internetworking, Interprocess Communication, Distributed objects and Remote Invocation- Introduction, Communication between distributed objects, RPC, Events and notifications, Case study-Java RMI.

**UNIT-II**

Operating System Support-Introduction, OS layer, Protection, Processes and Threads, Communication and Invocation, Operating system architecture, Distributed File Systems-Introduction, File Service architecture.

**UNIT-III**

Peer to Peer Systems-Introduction, Napster and its legacy, Peer to Peer middleware, Routing overlays, Overlay case studies-Pastry, Tapestry, Application

case studies- Squirrel, Ocean Store.

Time and Global States-Introduction, Clocks, events and Process states, Synchronizing physical clocks, logical time and logical clocks, global states, distributed debugging.

Coordination and Agreement-Introduction, Distributed mutual exclusion, Elections, Multicast communication, consensus and related problems.

#### **UNIT-IV**

Transactions and Concurrency Control-Introduction, Transactions, Nested Transactions, Locks, Optimistic concurrency control, Time stamp ordering. Distributed Transactions- Introduction, Flat and Nested Distributed Transactions, Atomic commit protocols, Concurrency control in distributed transactions, Distributed deadlocks, Transaction recovery.

#### **UNIT-V**

**Replication**-Introduction, System model and group communication, Fault to tolerant services, Transactions with replicated data. Distributed shared memory, Design and Implementation issues, Consistency models.

#### **TEXT BOOKS:**

1. Distributed Systems Concepts and Design, GCoulouris, JDollimore and TKindberg, Fourth Edition, Pearson Education.
2. Distributed Systems, S.Ghosh, Chapman & Hall/CRC, Taylor & Francis Group, 2010.

#### **REFERENCE BOOKS:**

1. Distributed Systems-Principles and Paradigms, A.S.Tanenbaum and M.V.Steen, Pearson Education.
2. Distributed Computing, Principles, Algorithms and Systems, Ajay D.Kshemakalyani and Mukesh Singhal, Cambridge, 2010.

| Prerequisites:    1. A Course on Software Engineering”<br>2. A Course on “Object Oriented Programming Through Java” |                          |                        |   |   |         |                  |     |       |

**Course Objectives:**

- The aim of the course is to appreciate the idea behind Design Patterns in handling common problems faced during building an application
- This course covers all pattern types from creational to structural, behavioral to concurrency and highlights the scenarios when one pattern must be chosen over others.

**Course Outcomes:**

- Create software designs that are scalable and easily maintainable
- Understand the best use of Object-Oriented concepts for creating truly OOP programs
- Use creational design patterns in software design for class instantiation
- Use structural design patterns for better class and object composition
- Use behavioral patterns for better organization and communication between the objects
- Use refactoring to compose the methods for proper code packaging
- Use refactoring to better organize the class responsibilities of current code

**UNIT - I**

**Introduction:** What is a design pattern? design patterns in Smalltalk MVC, Describing Design Patterns, The Catalog of Design Patterns, Organizing the Catalog, How Design Patterns Solve Design Problems, How to Select a Design Pattern, How to Use a Design Pattern.

**UNIT - II**

**Designing a Document Editor:** Design Problems, Document Structure, Formatting, Embellishing the User Interface, Supporting Multiple Look-and-Feel Standards, Supporting Multiple Window Systems, User Operations Spelling Checking and Hyphenation, Summary

**UNIT - III**

Creational Patterns: Abstract Factory, Builder, Factory Method, Prototype, Singleton, Discussion of Creational Patterns.

**UNIT - IV**

Structural Pattern: Adapter, Bridge, Composite, Decorator, Façade, Flyweight, Proxy

**UNIT - V**

Behavioral Patterns: Chain of Responsibility, Command, Interpreter, Iterator, Mediator,

Memento, Observer, State, Strategy, Template Method, Visitor.

**TEXT BOOK:**

1. Design Patterns, Erich Gamma, Pearson Education

**REFERENCE BOOKS:**

1. Pattern's in Java, Vol -I, Mark Grand, Wiley Dream Tech.
2. Patterns in Java, Vol-II, Mark Grand, Wiley Dream Tech.
3. Java Enterprise Design Patterns Vol-III, Mark Grand, Wiley Dream Tech.

|                    |                          | 3                       | 0 | 0 | 3       | 30               | 70  | 100   |
| Contact Classes:45 | Tutorial classes:15      | Practical classes: Nill |   |   |         | Total Classes:60 |     |       |
| Prerequisites:     |                          |                         |   |   |         |                  |     |       |

**CourseObjectives:**

To gain an overview of Human- Computer Interaction(HCI), with an understanding of user interface design in general, and alternatives to traditional "keyboard and mouse" computing; become familiar with the vocabulary associated with sensory and cognitive systems as relevant to task performance by humans; be able to apply models from cognitive psychology to predicting user performance in various human-computer interaction tasks and recognize the limits of human performance as they apply to computer operation; appreciate the importance of a design and evaluation methodology that begins with and maintains a focus on the user; be familiar with a variety of both conventional and non-traditional user interface paradigms, the latter including virtual and augmented reality,mobile and wearable computing, and ubiquitous computing; and understand the social implications of technology and their ethical responsibilities as engineers in the design of technologicalsystems. Finally, working in small groups on a product design from start to finish will provide you with in valuable team-work experience.

**CourseOutcomes:**

- Ability to apply HCI and principlesto interaction design.
- Ability to design certain tools for blind or PHpeople.

**UNIT-I**

Introduction: Importance of user Interface – definition, importance of good design. Benefits of gooddesign.A brief history of Screend esign.

The graphical user interface – popularity of graphics, the concept of direct manipulation, graphical system, Characteristics, Web user-Interface popularity, characteristics-Principles of user interface.

**UNIT-II**

Design process – Human interaction with computers, importance of human characteristics human consideration, Human interaction speeds, understanding business junctions.

Screen Designing: Designgoals-Screen planning and purpose, organizing

screen elements, ordering of screen data and content – screen navigation and flow – Visually pleasing composition – amount of information – focus and emphasis – presentation information simply and meaningfully – information retrieval on web– statistical graphics– Technological consideration in interface design.

### **UNIT-III**

Windows– New and Navigation schemes selection of window, selection of devices based and screen-based controls. Components – text and messages, Icons and increases – Multimedia, colors, uses problems, choosing colors.

### **UNIT-IV**

HCI in the software process, The software lifecycle Usability engineering Iterative design and prototyping Design Focus: Prototyping in practice Design rationale Design rules Principles to support usability Standards Golden rules and heuristics HCI patterns Evaluation techniques, Goals of evaluation, Evaluation through expert analysis, Evaluation through user participation, Choosing an evaluation method. Universal design, Universal design principles Multi-modal interaction

### **UNIT-V**

Cognitive models Goal and task hierarchies Design Focus: GOMS saves money Linguistic models The challenge of display-based systems Physical and device models Cognitive architectures Ubiquitous computing and augmented realities Ubiquitous computing applications research Design Focus: Ambient Wood – augmenting the physical Virtual and augmented reality Design Focus: Shared experience Design Focus: Applications of augmented reality Information and data visualization Design Focus: Getting the size right.

| Prerequisites:      NetworkSecurity |                     |                         |   |   |         |                  |     |       |

### **Course Objectives:**

- A brief explanation of the objective Is to provide digital evidences which are obtained from digital media.
- In order to understand the objectives of computer forensics, first of all, people have to recognize the different roles computer plays in ascertain crime.
- According to a snippet from the United States Security Service, the functions computer has in different kinds of crimes.

### **Course Outcomes:**

- Students will understand the usage of computers in forensic, and how to use various forensic tools for a wide variety of investigations.
- It gives an opportunity to students to continue their zeal in research in computer forensics

### **UNIT-I**

Introduction of Cybercrime: Types, The Internet spawns crime, Worm versus viruses, Computers' roles in crimes, Introduction to digital forensics, Introduction to Incident - Incident Response Methodology –Steps- Activities in Initial Response, Phase after detection of an incident

### **UNIT-II**

Initial Response and forensic duplication, Initial Response & Volatile Data Collection from Windows system -Initial Response & Volatile Data Collection from Unix system – Forensic Duplication: Forensic duplication: Forensic Duplicates as Admissible Evidence, Forensic Duplication Tool Requirements, Creating a Forensic Duplicate/ Qualified Forensic Duplicate of a Hard Drive

### **UNIT-III**

**Forensics analysis and validation:** Determining what data to collect and analyze, validating forensic data, addressing data-hiding techniques, performing remote acquisitions

**Network Forensics:** Network forensics overview, performing live acquisitions, developing standard procedures for network forensics, using network tools, examining the honey net project.

#### **UNIT-IV**

**Current Forensic tools:** evaluating computer forensic tool needs, computer forensics software tools, computer forensics hardware tools, validating and testing forensics software E-Mail Investigations: Exploring the role of e-mail in investigation, exploring the roles of the client and server in e-mail, investigating e-mail crimes and violations, understanding e-mail servers, using specialized e-mail forensic tools.

**Cell phone and mobile device forensics:** Understanding mobile device forensics, understanding acquisition procedures for cellphones and mobile devices.

#### **UNIT-V**

**Working with Windows and DOS Systems:** understanding file systems, exploring Microsoft File Structures, Examining NTFS disks, Understanding whole disk encryption, windows registry, Microsoft start up tasks, MS-DOS startup tasks, virtual machines.

#### **TEXTBOOKS:**

1. Kevin Mandia, Chris Prosise, "Incident Response and computer forensics", Tata McGraw Hill, 2006.

**CS4231OE: MACHINE LEARNING**  
**(Open Elective- III)**

| Contact<br>Classes:45 | Tutorial<br>classes:15 | Practical classes: Nill |   |   |         | Total Classes:60 |     |       |
| Prerequisites:        |                        |                         |   |   |         |                  |     |       |

**Course Objectives:**

- To be able to formulate machine learning problems corresponding to different applications.
- To understand arrange of machine learning algorithms along with their strengths and weaknesses.
- To understand the basic theory underlying machine learning.

**Course Outcomes:**

- Student should be able to understand the basic concepts such as decision trees and neural networks.
- Ability to formulate machine learning techniques to respective problems.
- Apply machine learning algorithms to solve problems of moderate complexity

**UNIT-I**

**Introduction:** An illustrative learning task, and a few approaches to it. What is known from algorithms? Theory, Experiment. Biology. Psychology. Overview of Machine learning, related areas and applications. Linear Regression, Multiple Regression, Logistic Regression, logistic functions.

**Concept Learning:** Version spaces. Inductive Bias. Active queries. Mistake bound/ PAC model. basic results. Overview of issues regarding data sources, success criteria.

**UNIT- II**

**Decision Tree Learning:** - Minimum Description Length Principle. Occam's razor. Learning with active queries Introduction to information theory, Decision Trees, Cross Validation and Over fitting.

**Neural Network Learning:** Perceptions and gradient descent back propagation, multi layer networks and back propagation.

**UNIT-III**

**Sample Complexity and Over fitting:** Errors in estimating means. Cross Validation and jack knifing VC dimension. Irrelevant features: Multiplicative rules for weight tuning.

**Support Vector Machines:** functional and geometric margins, optimum margin classifier, constrained optimization, Lagrange multipliers,

primal/dual problems, KKT conditions, dual of the optimum margin classifier, soft margins, and kernels.

**Bayesian Approaches:** The basics Expectation Maximization. Bayes theorem, Naïve Bayes Classifier, Markov models, Hidden Markov Models

#### UNIT-IV

**Instance-based Techniques:** Lazy vs. eager generalization. K nearest neighbor, case-based reasoning. **Clustering and Unsupervised Learning:** K-means clustering, Gaussian mixture density estimation, model selection

#### UNIT-V

**Genetic Algorithms:** Different search methods for induction - Explanation-based Learning: using prior knowledge to reduce sample complexity.

**Dimensionality reduction:** feature selection, principal component analysis, linear discriminant analysis, factor analysis, independent component analysis, multi dimensional scaling, manifold learning

| Contact<br>Classes:45 | Tutorial<br>classes:15 | Practical classes: Nil |   |   |         | Total Classes:60 |     |       |
| Prerequisites:        |                        |                        |   |   |         |                  |     |       |

### Course Objectives:

- To explain the evolving computer model called cloud computing.
- To introduce the various levels of services that can be achieved by cloud.
- To describe the security aspects in cloud.

### Course Outcomes:

- Ability to understand the virtualization and cloud computing concepts.

### UNIT-I

**Systems Modeling, Clustering and Virtualization:** Distributed System Models and Enabling Technologies, Computer Clusters for Scalable Parallel Computing, Virtual Machines and Virtualization of Clusters and Data centers.

### UNIT-II

**Foundations:** Introduction to Cloud Computing, Migrating into a Cloud, Enriching the 'Integration as a Service' Paradigm for the Cloud Era, The Enterprise Cloud Computing Paradigm.

### UNIT-III

**Infrastructure as a Service (IAAS) & Platform and Software as a Service (PAAS /SAAS):** Virtual machines provisioning and Migration services, On the Management of Virtual machines for Cloud Infrastructures, Enhancing Cloud Computing Environments using a cluster as a Service, Secure Distributed Data Storage in Cloud Computing. Aneka, Comet Cloud, T-Systems', Workflow Engine for Clouds, Understanding Scientific Applications for Cloud Environments.

#### **UNIT-IV**

**Monitoring, Management and Applications:** An Architecture for Federated Cloud Computing, SLA Management in Cloud Computing, Performance Prediction for HPC on Clouds, Best Practices in Architecting Cloud Applications in the AWS cloud, Building Content Delivery networks using Clouds, Resource Cloud Mashups.

#### **UNIT-V**

**Governance and Case Studies:** Organizational Readiness and Change management in the Cloudage, Data Security in the Cloud, Legal Issues in Cloud computing, Achieving Production Readiness for Cloud Services.

#### **TEXT BOOKS:**

1. Cloud Computing: Principles and Paradigms by Rajkumar Buyya, James Broberg and Andrzej M. Goscinski, Wiley, 2011.
2. Distributed and Cloud Computing, Kai Hwang, Geoffrey C. Fox, Jack J. Dongarra, Elsevier, 2012.

#### **REFERENCE BOOKS:**

1. Cloud Computing: A Practical Approach, Anthony T. Velte, Toby J. Velte, Robert Elsenpeter, Tata McGraw Hill, 2011.
2. Enterprise Cloud Computing, Gautam Shroff, Cambridge University Press, 2010.
3. Cloud Computing: Implementation, Management and Security, John W. Rittinghouse, James F. Ransome, CRC Press, 2012.
4. Cloud Application Architectures: Building Applications and Infrastructure in the Cloud, George Reese, O'Reilly, 2011.
5. Cloud Security and Privacy: An Enterprise Perspective on Risks and Compliance, Tim Mather, Subra Kumaraswamy, Shahed Latif, O'Reilly, 2011.

## CS4233OE: NATURAL LANGUAGE PROCESSING

(Open Elective- III)

| IV-II:CSE(AI&ML)      |                        |                         |   |   |         |                  |     |       |

| Contact<br>Classes:45 | Tutorial<br>classes:15 | Practical classes: Nill |   |   |         | Total Classes:60 |     |       |
| Prerequisites:        |                        |                         |   |   |         |                  |     |       |

### Course Objectives:

- Introduce to some of the problems and solutions of NLP and their relation to linguistics and statistics.

### Course Outcomes:

- Show sensitivity to linguistic phenomena and an ability to model them with formal grammars.
- Understand and carryout proper experimental methodology for training and evaluating empirical NLP systems
- Able to manipulate probabilities, construct statistical models over strings and trees, and estimate parameters using supervised and unsupervised training methods.
- Able to design, implement, and analyze NLP algorithms
- Able to design different language modeling Techniques.

### UNIT-I

**Finding the Structure of Words:** Words and Their Components, Issues and Challenges, Morphological Models

**Finding the Structure of Documents:** Introduction, Methods, Complexity of the Approaches, Performances of the Approaches

### UNIT-II

**Syntax Analysis:** Parsing Natural Language, Tree banks: A Data-Driven Approach to Syntax, Representation of Syntactic Structure, Parsing Algorithms, Models for Ambiguity Resolution in Parsing, Multilingual Issues

### UNIT-III

**Semantic Parsing:** Introduction, Semantic Interpretation, System Paradigms, Word Sense Systems, Software.

#### **UNIT-IV**

Predicate- Argument Structure, Meaning Representation Systems, Software.

#### **UNIT-V**

**Discourse Processing:** Cohension, Reference Resolution, Discourse Cohension and Structure **Language Modeling:** Introduction, N-Gram Models, Language Model Evaluation, Parameter Estimation, Language Model Adaptation, Types of Language Models, Language-Specific Modeling Problems, Multilingual and Crosslingual Language Modeling

#### **TEXTBOOKS:**

- MultilingualnaturalLanguageProcessingApplications:FromTheorytoPractice–Daniel M.Bikeland Imed Zitouni,Pearson Publication
- NaturalLanguageProcessingandInformationRetrieval:TanvierSiddiqui,U.S. Tiwary

| Contact<br>Classes:45 | Tutorial<br>classes:15 | Practical classes: Null                                  |   |   |         | Total Classes:60 |     |       |
| Prerequisites:        |                        | BasicElectricalEngineering,AnalogElectronics,Mathematics |   |   |         |                  |     |       |

### Course objectives:

- To introduce the basic principles of all measuring instruments
- To deal with the measurement of voltage, current, Power factor, power, energy and magnetic measurements.
- To understand the basic concepts of Control Engineering

### Course Outcomes:

After completion of this course, the student able to

- Understand different types of measuring instruments, their construction, operation and characteristics
- Identify the instruments suitable for typical measurements
- Apply the knowledge about transducers and instrument transformers to use them effectively.
- Apply the knowledge of basic control engineering.

### UNIT-I

**Characteristics of Signals:** Measuring Systems, Performance Characteristics- Static characteristics, Dynamic Characteristics; Errors in Measurement- Gross Errors, Systematic Errors, Statistical Analysis of Random Errors.

### UNIT-II

**Oscillo scope:** Cathode ray oscillo scope-Cathode ray tube-time base generator-horizontal and vertical amplifiers- CRO probes- applications of CRO-Measurement of phase and frequency-lissajous patterns-Sampling oscillo scope-analog and digital type.

### UNIT-III

**Transducers:** Definition of transducers, Classification of transducers, Advantages of electrical transducers, Characteristics and choice of transducers; Principle of operation of resistor, inductor, LVDT and capacitor transducers.

### UNIT-IV

**Measurement of Non-Electrical Quantities:** Measurement of strain, Gauge sensitivity, Displacement, Force Velocity, Angular Velocity, Acceleration, Force, Torque, Temperature, Pressure, Vacuum, Flow

### UNIT-V

**Introduction to Control System:** Concepts of Control Systems- Open Loop and closed loop control systems and their differences- Different examples of control systems- Classification of control systems, Feed- Back Characteristics, Effects of feedback. Mathematical models- Differential equations - Impulse Response and transfer functions - Translational and Rotational mechanical systems.

### CourseObjective:

- To enable the student to understand the need for energy storage, devices and technologies available and their applications.

**Course Outcomes:**After completion of this course,the student will be able to

- Analyze the characteristics of energy from various sources and need for storage.
- Classify various types of energy storage and various devices used for the purpose.
- Identify various real time applications.

### UNIT-I

Electrical Energy Storage Technologies: Characteristics of electricity, Electricity and the roles of EES, High generation cost during peak-demand periods, Need for continuous and flexible supply, Long distance between generation and consumption, Congestion in power grids, Transmission by cable.

### UNIT-II

Needs for Electrical Energy Storage: Emerging needs for EES, More renewable energy, less fossil fuel, Smart Grids, The roles of electrical energy storage technologies, The roles from the viewpoint of a utility, The roles from the viewpoint of consumers, The roles from the viewpoint of generators of renewable energy.

### **UNIT-III**

Features of Energy Storage Systems: Classification of EES systems , Mechanical storage systems, Pumped hydro storage (PHS), Compressed air energy storage (CAES), Fly wheel energy storage (FES), Electrochemical storage systems, Secondary batteries, Flow batteries, Chemical energy storage, Hydrogen(H<sub>2</sub>), Synthetic natural gas(SNG).

### **UNIT-IV**

Types of Electrical Energy Storage systems: Electrical storage systems, Double-layer capacitors(DLC), Super conducting magnetic energy storage(SMES), Thermal storage systems, Standards for EES, Technical comparison of EES technologies.

### **UNIT-V**

Applications: Present status of applications, Utility use (conventional power generation, grid operation& service), Consumer use(uninterruptable power supply for large consumers), New trends in applications ,Renewable energy generation, Smart Grid, Smart Micro grid, Smart House, Electric vehicles, Management and control hierarchy of storage systems, Internal configuration of battery storage systems, External connection of EES systems ,Aggregating EES systems and distributed generation (Virtual Power Plant), Battery SCADA–aggregation of many dispersed batteries.

| Prerequisites:        Electro chemistry |                        |                         |   |   |         |                  |     |       |

### Course Objectives:

- It provides an understanding of various measuring systems functioning and metrics for performance analysis.
- Provides understanding of principle of operation, working of different electronic instruments viz. signal generators, signal analyzers, recorders and measuring equipment.
- Provides understanding of use of various measuring techniques for measurement of different physical parameters using different classes of transducers.

**Course Outcomes:**On completion of this course student can be able to

- Identify the various electronic instruments based on their specific ations for carrying out a particular task of measurement.
- Measure various physical parameters by appropriately selecting the transducers.
- Use various types of signal generators, signal analyzers for generating and analyzing various real-time signals.

### UNIT-I

Block Schematics of Measuring Systems and Performance Metrics: Performance Characteristics, Static Characteristics, Accuracy, Precision, Resolution, Types of Errors, Gaussian Error, Root Sum Squares formula, Dynamic Characteristics, Repeatability, Reproducibility, Fidelity, Lag.

### UNIT-II

Signal Generators: AF, RF Signal Generators, Sweep Frequency Generators, Pulse and Square wave Generators, Function Generators, Arbitrary Wave form Generator,and Specifications.

### **UNIT-III**

Measuring Instruments: DC Voltmeters, D'Arsonval Movement, DC Current Meters, AC Voltmeters and Current Meters, Ohmmeters, Multimeters, Meter Protection, Extension of Range, True RMS Responding Voltmeters, Specifications of Instruments. CRT, Block Schematic of CRO, Time Base Circuits, Lissajous Figures, CRO Probes.

### **UNIT-IV**

Recorders: X-Y Plotter, Curvetracer, Galvanometric Recorders, Servo transducers, pen driving mechanisms, Magnetic Recording, Magnetic recording techniques.

### **UNIT-V**

Transducers: Classification, Strain Gauges, Bounded, unbounded; force and Displacement Transducers, Resistance Thermometers, Hotwire Anemometers, LVDT, Thermo couples, Synchros, Special Resistance Thermometers, Digital Temperature sensing system, Piezo electric Transducers, Variable Capacitance Transducers, Magneto Strictive Transducers.

| Contact<br>Classes:45                     | Tutorial<br>classes:15 | Practical classes: Nill |   |   |         | Total Classes:60 |     |       |
| Prerequisites:            Mathematics III |                        |                         |   |   |         |                  |     |       |

### **Course Objectives:**

- To introduce the basic concepts of reliability, various models of reliability
- To analyze reliability of various systems
- To introduce techniques of frequency and duration for reliability evaluation of repairable systems.

**Course Outcomes:** After completion of this course, the student will be able to

- model various systems applying reliability networks
- evaluate the reliability of simple and complex systems
- estimate the limiting state probabilities of repairable systems
- apply various mathematical models for evaluating reliability of irreparable systems

### **UNIT-I**

Basic Probability Theory: Elements of probability, probability distributions, Random variables, Density and Distribution functions- Binomial distribution-Expected value and standard deviation

- Binomial distribution, Poisson distribution, normal distribution, exponential distribution, Weibull distribution.

Definition of Reliability: Definition of terms used in reliability, Component reliability, Hazardrate, derivation of the reliability function in terms of the hazard rate. Hazard models - Bath tubcurve,

Effect of preventive maintenance. Measures of reliability: Mean Time to Failure and Mean Time between Failures.

## **UNIT-II**

Network Modeling and Evaluation of Simple Systems: Basic concepts- Evaluation of network Reliability / Unreliability - Series systems, Parallel systems- Series-Parallel systems partially redundant systems-Examples.

Network Modeling and Evaluation of Complex systems: Conditional probability method, tie set, Cutset approach- Event tree and reduced event tree methods- Relationships between tie sets and cutsets- Examples.

## **UNIT-III**

Time Dependent Probability: Basic concepts-Reliability function  $f(t)$ ,  $F(t)$ ,  $R(t)$  and  $h(t)$ -Relationship between these functions.

Network Reliability Evaluation Using Probability Distributions: Reliability Evaluation of Series systems, Parallel systems – Partially redundant systems- determination of reliability measure-MTTF for series and parallel systems– Examples.

## **UNIT-IV**

Discrete Markov Chains: Basic concepts-Stochastic transitional probability matrix- time dependent probability evaluation-Limiting State Probability evaluation- Absorbing states– Examples.

Continuous Markov Processes: Modeling concepts- State space diagrams- Unreliability evaluation of single and two component repairable systems

## **UNIT-V**

Frequency and Duration Techniques: Frequency and duration concepts, application to multistate problems, Frequency balance approach.

Approximate System Reliability Evaluation: Series systems– Parallel systems- Network reduction techniques- Cutset approach-Common mode failures modeling and evaluation techniques-Examples.

**TEXT BOOKS:**

| Course Code           | Category               | Hours/Weak              |   |   | Credits | Max Marks        |     |       |
| ME4232OE              | Open                   | L                       | T | P | C       | CIE              | SEE | Total |
|                       | Elective- III          | 3                       | 0 | 0 | 3       | 30               | 70  | 100   |
| Contact<br>Classes:45 | Tutorial<br>classes:15 | Practical classes: Nill |   |   |         | Total Classes:60 |     |       |
| Prerequisites:        |                        |                         |   |   |         |                  |     |       |

### **Course objectives:**

- Understand the philosophies of management gurus
- Understand the various types of organization structures and their features, and their advantages and disadvantages.
- Learning various Industrial Engineering Practices like Operation Management techniques, work study, statistical quality control techniques, Job evaluation techniques and network analysis techniques.

### **Course outcomes:**

- Able to apply principles of management
- Able to design the organization structure
- Able to apply techniques for plant location, design plant layout and value analysis
- Able to carry out work study to find the best method for doing the work and establish standard time for a given method
- Able to apply various quality control techniques and sampling plans
- Able to do job evaluation and network analysis.

**UNIT.I** Introduction to Management: Entrepreneurship and organization- Nature and Importance of Management, Functions of Management, Taylor's Scientific Management Theory, Fayol's Principles of Management, Maslow's Theory of Human Needs, Douglas McGregor's Theory X and Theory Y, Herzberg's Two-Factor Theory of Motivation, Systems Approach to Management, Leadership Styles, Social responsibilities of Management

## **UNIT.II**

Designing Organizational Structures: Departmentalization and Decentralization, Types of Organization structures- Line organization, Line and staff organization, functional organization, Committee organization, matrix organization, Virtual Organization, Cellular Organization, team structure, boundaryless organization, inverted pyramid structure, lean and flat organization structure and their merits, demerits and suitability.

## **UNIT.III**

Operations Management: Objectives- product design process- Process election- Types of production system (Job, batch and Mass Production), Plant location- factors- Urban- Ruralsites comparison- Types of Plant Layouts- Design of product layout- Line balancing (RPW method) Value analysis- Definition- types of values- Objectives- Phases of value analysis- Fast diagram

## **UNIT.IV:**

Work Study: Introduction- definition- objectives- steps in work study- Method study- definition, objectives- steps of method study. Work Measurement- purpose- types of study- Stop watch methods- steps- key rating- allowances- standard time calculations- work sampling.

Statistical Quality Control: variables- attributes, Shewart control charts for variables- chart, Rchart, - Attributes- Defective-Defect- Charts for attributes- p-chart -c chart (simple Problems), Acceptance Sampling- Single sampling- Double sampling plans- OC curves.

## **UNIT.V**

Job Evaluation: Methods of job evaluation - simple routing objective systems - classification method factor comparison method, point method, benefits of job evaluation and limitations. Project Management (PERT/CPM): Network Analysis, Programme Evaluation and Review Technique (PERT), Critical Path Method (CPM), Identifying critical path, Probability of Completing the project within given time, Project Cost Analysis, Project Crashing .(Simple problems)

| Contact<br>Classes:45 | Tutorial<br>classes:15 | Practical classes: Null |   |   |         | Total Classes:60 |     |       |
| Prerequisites:        |                        |                         |   |   |         |                  |     |       |

### **Course Objectives:**

- To explain the concepts of Non-renewable and renewable energy systems
- To outline utilization of renewable energy sources for both domestic and industrial applications
- To analyse the environmental and cost economics of renewable energy sources in comparison with fossil fuels.

### **Course Outcomes:**

- Understanding of renewable energy sources
- Knowledge of working principle of various energy systems
- Capability to carryout basic design of renewable energy systems

### **UNIT.I**

Global and National Energy Scenario: Over view of conventional & renewable energy sources,need & development of renewable energy sources, types of renewable energy systems, Future ofEnergyUse, Global and IndianEnergy scenario,Renewable and Non-renewableEnergy sources,Energy for sustainable development, Potential of renewable energy sources, renewable electricityand key elements, Global climate change, CO<sub>2</sub> reduction potential of renewable energy- conceptof Hybrid systems.

### **UNIT.II**

Solar Energy: Solar energy system, Solar Radiation, Availability, Measurement and Estimation,Solar Thermal Conversion Devices and Storage, Applications Solar Photovoltaic Conversion solar photo voltaic,solar thermal,applications of solar energy systems.

### **UNIT.III**

WindEnergy: Wind Energy Conversion, Potential, Wind energy potential measurement, Site selection, Types of wind turbines, Wind farms, wind Generation and Control. Nature of the wind, power in the wind, factors influencing wind, wind data and energy estimation, wind speed monitoring, classification of wind, characteristics, applications of wind turbines, offshore wind energy- Hybrid systems, wind resource assessment, Betz limit, site selection, wind energy conversion devices. Safety and environmental aspects, wind energy potential and installation in India.

### **UNIT.IV**

Biogas: Properties of biogas (Calorific value and composition), biogas plant technology and status, Bioenergy system, design and constructional features. Biomass resources and their classification, Biomass conversion processes, Thermo chemical conversion, direct combustion, biomass gasification, pyrolysis and liquefaction, biochemical conversion, anaerobic digestion, types of biogas Plants, applications, alcohol production from biomass, bio diesel production, Urban waste to energy conversion, Biomass energy programme in India.

### **UNIT.V**

Ocean Energy: Ocean wave energy conversion, principle of Ocean Thermal Energy Conversion (OTEC), ocean thermal power plants, tidal energy conversion, Tidal and wave energy its scope and development, Scheme of development of tidal energy.

Small hydro Power Plant: Importance of small hydro power plants and their Elements, types of turbines for small hydro, estimation of primary and secondary power.

Geothermal Energy: Geothermal power plants, types of Geothermal resources, hot springs and steam ejection.

### **TEXT BOOKS:**

1. Renewable Energy Sources /Twidell, J.W. and Weir, A./EFNSpon Ltd., 1986.
2. Non-Conventional Energy Sources /G.D.Rai /Khanna Publishers

**REFERENCE BOOKS:**

| CE4231OE                      | Open<br>Elective- III  | L                       | T | P | C       | CIE              | SEE | Total |
|                               |                        | 3                       | 0 | 0 | 3       | 30               | 70  | 100   |
| Contact<br>Classes:45         | Tutorial<br>classes:15 | Practical classes: Nill |   |   |         | Total Classes:60 |     |       |
| Prerequisites:      Surveying |                        |                         |   |   |         |                  |     |       |

**Course Objectives:** This course will make the student to understand about the principles of GIS,Remote Sensing, SpatialSystems,and its applicationsto EngineeringProblems.

**CourseOutcomes:** At the end of the course, the student will be able to:

- Retrieve the information content of remotely sensed data
- Analyze the energy interactions in the atmosphere and earth surface features
- Interpret the images for preparation of thematicmaps
- Apply problem specific remote sensing data for engineering applications
- Analyze spatial and attribute data for solving spatial problems
- Create GIS and cartographic outputs for presentation

### UNIT- I

Introduction to Photo grammetry: Principles& types of aerial photograph, geometry of verticalaerial photograph, Scale & Height measurement on single vertical aerial photograph, Height measurement based on relief displacement, Fundamental sofstereoscopy, fiducial points, parallax measurement usingfiducial line.

### UNIT- II

Remote Sensing: Basic concept of remote sensing, Data and Information, Remote sensing data Collection, Remote sensing advantages & Limitations, Remote Sensing process. Electro-magnetic Spectrum, Energy interactions with atmosphere and with earth surfacefeatures (soil,water, vegetation), Indian Satellites and Sensors characteristics, Resolution, Map and Image and False color composite, introduction to digital data, elements of visual interpretation techniques.

### **UNIT- III**

Geographic Information Systems: Introduction to GIS; Components of a GIS; Geospatial Data: Spatial Data-Attribute data – Joining Spatial and Attribute data; GIS Operations: Spatial Data Input-Attribute data Management-Data display-Data Exploration-Data Analysis. COORDINATE SYSTEMS: Geographic Coordinate System: Approximation of the Earth, Datum; Map Projections: Types of Map Projections-Map projection parameters- Commonly used Map Projections -Projected coordinate Systems.

### **UNIT- IV**

Vector Data Model: Representation of simple features- Topology and its importance; coverage and its data structure, Shape file; Data models for composite features Object Based Vector Data Model; Classes and their Relationship; The geobase data model; Geometric representation of Spatial Feature and data structure, Topology rules

### **UNIT- V**

Raster Data Model: Elements of the Raster data model, Types of Raster Data, Raster Data Structure, Data Conversion, Integration of Raster and Vector data.

Data Input: Metadata, Conversion of Existing data, creating new data; Remote Sensing data, Field data, Text data, Digitizing, Scanning, on screen digitizing, importance of source map, Data Editing

### **TEXTBOOKS:**

1. Remote Sensing and GIS Lilles and Kiefer, John Wiley 2008.
2. Remote Sensing and GIS B. Bhatta by Oxford Publishers 2015.
3. Introduction to Geographic Information System – Kang-Tsung Chang, McGraw-Hill 2015

| Contact<br>Classes:45 | Tutorial<br>classes:15 | Practical classes: Nil |   |   |         | Total Classes:60 |     |       |
| Prerequisites:        | Surveying              |                        |   |   |         |                  |     |       |

**Course Objectives:** The subject provides different disasters, tools and methods for disaster management.

**CourseOutcomes:** At the end of the course, the student will be able to:

- Understanding Disasters, man-made Hazardsand Vulnerabilities
- Understanding disaster management mechanism
- Understanding capacity building concepts and planning of disaster managements

### UNIT-I

Understanding Disaster: Concept of Disaster - Different approaches- Concept of Risk - LevelsofDisasters –Disaster Phenomenaand Events (Global,national and regional)

Hazards and Vulnerabilities: Natural and man-made hazards; response time, frequency and forewarning levels of different hazards - Characteristics and damage potential or natural hazards;hazard assessment - Dimensions of vulnerability factors; vulnerability assessment – Vulnerability and disaster risk - Vulnerabilities to flood and earth quakehazards

### UNIT-II

Disaster Management Mechanism: Concepts of risk management and crisis managements -Disaster Management Cycle- Response and Recovery - Development, Prevention, Mitigation and Preparedness- Planning for Relief

### UNIT-III

Capacity Building: Capacity Building: Concept-Structural and Nonstructural Measures Capacity Assessment; Strengthening Capacity for Reducing Risk - Counter-Disaster Resources and their utility in Disaster Management-Legislative Support atthe state and national levels

#### **UNIT-IV**

Coping with Disaster: Coping Strategies; alternative adjustment processes– Changing Concepts of disaster management - Industrial Safety Plan; Safety norms and survival kits – Mass media and disaster management.

#### **UNIT-V**

Planning for disaster management: Strategies for disaster management planning - Steps for formulating a disaster risk reduction plan - Disaster management Act and Policy in India - Organizational structure for disaster management in India- Preparation of state and district disaster management plans

#### **TEXTBOOKS:**

1. Manual on Disaster Management, National Disaster Management, Agency Govt of India.
2. Disaster Management by Mrinalini Pandey Wiley 2014.
3. Disaster Science and Management by T. Bhattacharya, McGraw Hill Education (India) Pvt Ltd Wiley 2015
